THIRTY-NINTH

ANNUAL REPORT

OF THE

REGISTRAR-GENERAL

OF

BIRTHS, DEATHS, AND MARRIAGES

IN ENGLAND.

108188

(ABSTRACTS OF 1876.)

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED BY GEORGE E. EYRE AND WILLIAM SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.
FOR HER MAJESTY'S STATIONERY OFFICE.

CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1876.

REPORT:— PAGES

PROGRESS and ECONOMIC VALUE of the ENGLISH POPULATION . . v–xi

EMIGRATION from the UNITED KINGDOM . . . . . xi–xiii

INCREASE of POPULATION xiii

METEOROLOGY at GREENWICH; PRICES of WHEAT and MEAT; NUMBER and VALUE of ANIMALS IMPORTED, and QUANTITY of MEAT IMPORTED; PAUPERISM . . . . . xiii–xv

MARRIAGES; Marriage-rate; Number celebrated according and *not* according to the Rites of the Established Church; Previous condition of Persons married; Ages of Persons married; Marriages of Minors; Signatures in Marriage Registers; Educational condition of different Counties, as shown by the Signatures of Marriage Registers; Buildings registered for the Solemnization of Marriages; Certified Places of Worship; Designations of Religious Bodies . . . xv–xxiii

BIRTHS. Number registered; Birth-rate; Children born out of Wedlock . . . . . xxiii–xxvi

DEATHS. Number registered; Death-rate; Mortality in Town and Country; Mortality of Males and Females at various Ages; Seasons; Locality; Mortality of Children under One Year of Age in England and in 18 large Towns. Death-rate of Children under Five Years of Age in 17 large Towns. Deaths in Public Institutions in England and in London . . . . . xxvi–xxxv

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE . . . xxxv, xxxvi

UNITED KINGDOM. Population, Emigration, Marriage, Birth, and Death Rates xxxvi

THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD xxxvii

THE NAVY. STRENGTH and MORTALITY of the NAVY . . xxxvii–xxxviii

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY by DROWNING in the MERCHANT SERVICE compared with that in the ROYAL NAVY . . . . . xxxviii, xxxix

WILLS. Numbers and Values of Probates and Administrations; Calendars of Grants of Probate and Administration *kept at the* General Register Office xl

EUROPEAN STATES. Marriage, Birth, and Death Rates; Some Results of the Census of France in 1876 . . . . . xl–xliii

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xliv–xlvi

PRELIMINARY TABLES . . . . . xlvii–cxvi

ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions, Counties, and Districts; distinguishing those according and those *not* according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks 2–25

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 26–28

MARRIAGES, BIRTHS, and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also BIRTHS and DEATHS and EXCESS of BIRTHS over DEATHS in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout 30–84

ABSTRACTS—*continued.* PAGES

Births Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 86–89

Births of Children born out of Wedlock Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 90–93

Deaths Registered in Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 94–97

Deaths of Males and Females in Public Institutions 99–119

Deaths of Males and Females at different Ages Registered in Divisions, Counties, and Districts 122–143

Causes of Death of Males and Females in England at different Periods of Life 146–155

Causes of Death of Males and Females in London at different Periods of Life 156–161

Causes of Death of Males and Females in England, and in each of the Divisions and Counties 162–185

Deaths from several Zymotic and other Causes, and Inquest Cases, in the Divisions, Counties, and Districts of England . 186–197

Violent Deaths in England, distinguishing Sex and Age 198–204

Violent Deaths in each of the Eleven Divisions of England, distinguishing Sex 205–211

Deaths returned as having occurred from Suicide in England, distinguishing Sex and Age 212–213

Deaths returned as having occurred from Suicide in each of the Eleven Divisions of England, distinguishing Sex 214, 215

Deaths returned as having occurred from Murder and Infanticide in England, distinguishing Sex and Age 216, 217

Deaths returned as having occurred from Murder and Infanticide in each of the Eleven Divisions of England, distinguishing Sex . . 218

Deaths returned as having occurred from Manslaughter in England, distinguishing Sex and Age 219, 220

Deaths returned as having occurred from Manslaughter in each of the Eleven Divisions of England, distinguishing Sex 221

APPENDIX.

LETTER TO THE REGISTRAR-GENERAL ON THE CAUSES OF DEATH IN ENGLAND, by WILLIAM FARR, Esq., M.D., F.R.S.:—

Causes of Death 225–226

(1) *Zymotic Diseases* 226–239

(2) *Constitutional Diseases* 239

(3) *Local Diseases* 239–240

(4) *Developmental Diseases* 241–251

(5) *Violence* 251

Effect of Atmospheric Vicissitudes on the Mortality . . . 252–255

Causes of Death of Children under One Year of Age . . . 255–257

Tables 258–292

Index of Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts 293–307

Alphabetical Index to Report, Tables, and Appendix . . . 308–324

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P., President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
30th *March* 1878.

(1876.)

SIR,

I HAVE the honour to submit to you my *Thirty-ninth* Annual Report. The Amendment Act introduced by you came into operation on 1st January 1875; and I have to state that the various changes, of which I gave some account in the last Report, have worked satisfactorily. Registration is more complete than it was, and I believe more accurate. This is especially the case with the births, of which registration was rendered compulsory. The birth register is of so much use to the child all through life that the neglect of the parent to procure it is criminal.

I propose now to give a brief account of the registered additions to the population since 1st July 1837, when civil registration began; and to determine as nearly as I am able how far the number of children registered falls short of the number of children born alive. The facts prove that the defects were diminishing before the law was enforced by penalties; and now with due vigilance the registration of births as well as of deaths will, I believe, be in England as complete as it is in any other country in Europe.

Looking back from the first complete year of registration to the last, the annual births were 463,787 in 1838 and 887,968 in 1876; and the new births actually recorded from 1st July 1837 on the national registers were 26,129,906. There were in the first year 30·3 births registered to every 1,000 inhabitants, in the last year 36·6; and after allowing for any natural increase of the rate in the interval, or any deficiency of registration in the last year of all, I am inclined to think the actual birth-rate of living children was 36 per 1,000 during the 39½ years of civil registration. At this rate besides the 26,129,906 births registered therefore 1,441,603 births remained unregistered, or about 5 in 100.

The births were diminished by 17,079,018 deaths,* which after subtraction left an excess in the numbers added to the population of 10,492,491; about 1,200,609 more than the increase of the home population determined from the censuses. The 1,200,609 must have left England by emigration in excess of immigration. There were in *England and Wales* in the middle of 1837 about 15,103,778 people; and at the end of 1876 more by 9,291,882 new comers, making in the aggregate 24,395,660 inhabitants on 31st December 1876.

The emigration from Scotland and Ireland has been in proportion to their population more extensive than the emigration from England; and certain numbers of the population of England are of Scotch or Irish birth or descent. Consequently as the population in Ireland—not the Irish people—decreased, the increase of the population in the UNITED KINGDOM was less than the increase of the population during the same time in England and Wales. The increase of population in the UNITED KINGDOM,

* The mortality was 2·23 per cent., see p. xlix.

exclusive of the islands in the British seas, in the 39·5 years was 7,619,759.* I leave out of account here the numbers of the army, navy, and merchant seamen abroad, the English, Scotch, and Irish residing in other countries, as well as the immense number of living emigrants and their descendants in the Colonies and in the United States.

The population of the UNITED KINGDOM increased in the 39 years 1837–1876 at the rate of 29 per cent.†; and in the last ten years at the rate of 10 per cent. The increase in the last ten years was at the rate of 0·94 per cent. per annum. It was 0·66 per annum during the whole 39 years.

Various attempts have been made to estimate the amount, and the increase of the capital of the United Kingdom. The most recent attempt of the kind has been made by the chief of the statistical department of the Board of Trade. The value of the most important part of the capital of the United Kingdom and its increase have yet to be determined; I mean the economic value of the population itself. To that I propose to call attention briefly.

As lands, houses, railways, and the other categories in the income tax schedules are of value, because they yield annual returns; so for the same reason, and on the same principle the income of the population derived from pay of every kind for professional or other services, and wages can be capitalized; not precisely, it is true, unless the income of every person living were returned at least as nearly as the incomes subject to income tax; but sufficiently near to the true value to show that the value of the population itself is the most important factor in the wealth of the country.

It will be sufficient to state here that the capitalization of personal incomes always proceeds upon the determination of the present value at any age of the *future annual earnings* at that and all future ages; hence the Value of future wages rises from the date of birth, when it is a notable quantity; is highest in the labouring classes at the age of 25; and declines as age advances, until in extreme age when no wages are earned, it disappears. The living by the Life Table are most numerous in childhood, and gradually fall off till they are all extinct; and so in the population enumerated at the Census the numbers decline from the first year to the ultimate year of age. While the rates of wages rise rapidly from birth to the age of manhood, and afterwards decline, the numbers living constantly

* PROGRESS of the POPULATION of the UNITED KINGDOM in 39½ Years.

—	UNITED KINGDOM. (U.K.=E.W.S.I.)	GREAT BRITAIN. (G.B.=E.W.S.)	ENGLAND AND WALES. (E.W.)	SCOTLAND. (S.)	IRELAND. (I.)
Middle of 1837	25,650,426	17,626,431	15,103,778	2,522,653	8,023,995
End of 1876 -	33,270,185	27,939,923	24,395,660	3,544,263	5,330,262
Increase in 39½ Years	7,619,759	10,313,492	9,291,882	1,021,610	(Decrease.) 2,693,733

Note.—The population of the Islands in the British Seas, and the numbers of the Army, of the Navy, and of the Merchant Service abroad, here omitted, amounted—
in 1841 to 325,896
in 1871 to 369,244
Increase 43,348

† The births and deaths have only been registered in recent years in Ireland; in England while the deaths have been accurately registered from the first, the registration of births has only recently been made compulsory. The birth rates of England are given year by year (see Preliminary Tables, No. 2, p. xlix.); and it will be seen (see Preliminary Tables, No. 50, p. xcv.) that the rate last year was 36·5 in Great Britain; in Ireland it was only 26·4, partly through defective registration and partly from other causes. In England the death-rate was 22·3 per 1000 in the 39½ years; and the birth-rate during the same period may be set down at 36·0. Applying these rates as fairly applicable to the population of the United Kingdom, exclusive of the Islands in the British seas the births were 41,079,483; the deaths were 25,446,457; leaving an excess of 15,633,026 births. The excessive deaths in Ireland in the year of famine were, I believe, counterbalanced by the reduced mortality in other years.

decline. Taking a series of observations on the wages of agricultural labourers* some years ago at different ages; determining their value by a Life Table at five per cent. rate of interest for each age; and multiplying the numbers living by these values, it is found that the mean gross value at all ages is 349*l.* But the mean value of the subsistence of the labourer as child and man, determined by the same method, is about 199*l.*; and deducting this sum from 349*l.*, there remain 150*l.* as the mean net value of the male population, estimated by this standard of the *agricultural labourer*. To extend the value to the whole population, including females, the standard might be lowered from 150*l.* to 110*l.* a head.

Then multiplying the population of the United Kingdom by 110 we have as the aggregate value £3,640 million; this including only as much of the income as approximates in annual amount to the wages of agricultural labourers. Only a small part of it is subject to assessment under the income tax schedules. The gross assessment under the income tax affords the means of estimating the value of incomes exceeding 100*l.* a year under schedules D. and E.; excluding companies, mines, and works, these profits and salaries amount to £214 million a year, to which about £92 million a year may be added for incomes above 30*l.* and below 100*l.* a year; thus making the aggregate of such incomes £306 million a year; which when the assessments of B. (farmers') are added becomes £373 million a year. Deduct the *half* of this revenue as due to external capital, and as required for the necessary sustenance of farmers, tradesmen, and professional men and there remain £186½ million a year as pure profit; which cannot be capitalized as a perpetuity inasmuch as the interest is limited by the lives of the producers, but taking life contingencies into account may be capitalized at ten years' purchase. This makes the value of these incomes £1,865 million. Allowing £255 million for the part of the incomes of about a million people paying the income tax previously valued in the £3,640 million, and for other deductions, £1,610 million remain, which, added to the £3,640 million already obtained, make £5,250 million.†

Thus by capitalizing the earnings, fees, salaries, wages of the professional, mercantile, trading, and working classes, £5,250 million are obtained as an approximation to the value which is inherent in the people, and may be fairly added to the capital in land, houses, cattle or stock, and other investments. The amount would be increased by taking into account the rise of wages, and the income omitted in the returns of Schedule D. With an industrial census an accurate estimate can be made of this most important part of the capital of the country.

The minimum value of the population of the United Kingdom, men, women, and children, is 159*l.* a head; that is the value inherent in them as a productive, money-earning race. The incomes chiefly under schedules D., E., and B., raise the mean value from 110*l.* to 159*l.* (see above).

Again it must be borne in mind that the value under Schedule A. is dependent upon the population; where there is little population land itself is of little value. The increase of the value of house property is directly due to the increased numbers and earnings of the inhabitants. The railways yield no profit where there is no population. The profits of quarries, mines, ironworks (Schedule D.), and other concerns are mainly due to the skill and industry of the masters and men who work them. Upon the other hand the products of human industry are multiplied a hundredfold by the tools, machinery, steam power, and all the appliances which capital commands and represents. Should the population of a country decay, the value of its capital might sink to the vanishing point.

What I wish further to point out is that during the 39½ years this office has existed there have been added to the population of the United Kingdom 7,619,759 people, who valued as land is valued by the annual yield of

* See Journal of the Statistical Society, Vol. xvi., pp. 42–43.

† Mr. Giffen makes the value of the capital in other forms £8,500 million; making with the value of the population itself, £13,750 million. See Journal of the Statistical Society, Vol. xli., pp. 1–31.

net profit, constitute an addition of £1,212 million to the wealth of the nation.

The value of labour—that is of working men—varies, and is greatest where there is the greatest facility for profitable use, and where it is in greatest demand. Thus a large stream of the population of England flows to the Metropolis; and England is to the United Kingdom what the Metropolis is to England. So the populations of Ireland and Scotland flow into England, where they find more profitable employment, and are of more value than they are at home.

For the same and other reasons large armies of the population of the United Kingdom passed into the colonies and the United States; during the thirty-nine and a half years (1837–76) the excess of births over deaths was nearly 16 millions, of which nearly 8 millions augmented the ranks of the population at home, and more than 8 millions settled in other lands; chiefly in the midst of the old English stock of the United States and in the Colonies extending from Canada in America, to Africa and to Australasia.

Of the 8,013,267 people who must have left the country, only about 6,580,000 are accounted for by the Emigration Commissioners, whose returns were imperfect in two ways; they neither included the whole of the emigrants nor recognised emigrants returning recently in large numbers.*

The emigrants are chiefly adults married and unmarried; the men greatly exceeding the women in number. A few infants accompany their parents. Valuing the emigrants as the agricultural labourers have been valued at home—taking age and service into account—the value of emigrants in 1876 was 175*l.* per head.

If we may venture to apply this standard to the whole period it will follow that the money value of the 8,000,000 people that left England, Scotland, and Ireland in the years 1837–76, was £1,400 million, or on an average about 35,000,000*l.* a year. In round numbers taking into account their aptitude to earn wages in future years at the home rates the annual industrial army that went out was worth at starting 35,000,000*l.* Many of the emigrants are skilled artisans, and considerable numbers are returned as farmers, gentlemen, professional men, and merchants; some of whom no doubt carried away a certain amount of capital which is not here brought into account.

The policy of the people of this country has thus been a policy of progress; instead of resting as they were in 1837, they have added since that year on an average 192,873 souls annually to the population at home, and sent 202,868 sons and daughters to seek their fortune abroad in other fields of labour. The women, instead of to 644,214 children, who would just replace the population removed by deaths, have given birth to 1,039,987 annually, at a certain loss of their own lives with intermingled sorrows and joys such as befall mothers in rearing children: while the men instead of expending the whole of their gains on themselves have devoted a large share to their wives and families; besides that as we have seen the external wealth of the country has increased as the nation has without conquering territory or levying heavy contributions on its European neighbours.

The value of men varies with their earnings, which differ considerably in the colonies from the earnings of agricultural labourers at home; and on the whole before the civil war the emigrants to the United States got higher wages, and at the same time gave a higher value to the territory.

It may be contended that emigration is a loss to the mother country. It seems so. It is like the export of precious goods for which there is no return. But experience proves that simultaneously with this emigration there has been a prodigious increase of the capital of the country, especially in recent years. Wages have risen, and the value of the labourer has risen in proportion. In Norfolk where wages are intermediate between the rates in the north and south the rise has apparently been about 20 per cent.; so

* See Census Report 1871, where this was first demonstrated, and Emigration Report 1877.

a fifth may be added to the estimated value of the workman. When the man leaves the village where he was born and bred, he leaves the market open to his fellows; he removes to a field where his work is in demand, and carries his fortune with him. It is the same when he emigrates to the colonies. His parents in rearing him have expended their gains in the way most agreeable to themselves. They have on an average five children, instead of two or three, or none. Taking a wider view, the emigrants create articles of primary use with which in exchange they supply the mother country; they have sent to England in the 39 years wheat, cotton, wool, gold to the value of hundreds of millions. What is of still more vital importance, they grow into new nations; they multiply discoveries; by confederation they will be to the Anglo-Saxon race outposts of strength across the Atlantic, in the Pacific, in South Africa, and in Australasia on the flank of India. And, moreover, to all it is an advantage to speak a wide spread language, and thus to be in social, literary, and scientific communion with millions of the same race. The increasing numbers enable them, advanced as they are in the arts, in the sciences, and in civil government, to do more for the good of kindred races; and to endow them with advantages which could not be attained in other ways for centuries. They govern India.

The economic value of a population depends very much on their command over the powers of nature; which they acquire by education. Put barbarians in possession of the land, the mines, the manufactures, the machines, the ships, the triumphant position of these islands on the sea between two continents, and what would be the result? Another Asia Minor, Egypt, or Syria? The better educated the English people become, the more skilful they will become, and the more valuable in an economic sense they will be. The clever artisan is worth more than the rude labourer. Now the art of reading and writing their own language is by no means proof of complete education, or of any technical training, but it is a proof that men in possession of it are preparing to enter on the heritage of thought, and knowledge, and sentiment, which men of all ages have bequeathed to mankind, and which is enshrined in the writings of an admirable language.

In 1837 not more than 58 in 100 men and women possessed this art; but there has been progress, and I have year by year assiduously noted the increase of their numbers in the 39 years, so that I am now able to report, that instead of 58, *eighty-one* in a hundred write their names in the marriage registers.

It is evident that there are other elements on which the economic value of the working population depends; and foremost among them stand health and long life. The longer men live, and the stronger they are, the more work they can do. Epidemic diseases in rendering life, render wages, insecure. These diseases are most fatal in cities whither the population—to secure all the advantages of the division of labour—have been congregating every year in increased numbers: villages have become populous or have grown into towns; so the population has been growing denser. And that by a definite law, other things being equal, tends to increase weakness, sickness, and mortality. There have been counteracting agencies in operation in the *thirty-nine* years. Asiatic cholera was epidemic in England in 1831–2; influenza followed at intervals in 1833, 1837, and 1847; and laid thousands of the population low; in 1848-9 the cholera epidemic in England and Wales alone was fatal to *fifty-three thousand people*;* its ravages in every corner of the kingdom were described; the conditions of its diffusion and fatality were brought to light, and the further investigations of the slighter epidemics of 1854 and 1866 prove that this plague is under the control of science. Other epidemics have since been fatal especially to children, and fever has struck at princes and peers as well as peasants; but upon the whole the great zymotic diseases have been quelled. Plague in its various forms has been kept at bay by a series of defences based upon minute precau-

* Registrar General's Report on Mortality of Cholera in *1848–9*.

tions. In some epidemics I found it necessary to publish daily particulars respecting deaths in the Metropolis. By pursuing such inquiries, year after year, not only many of the causes that induce sickness and destroy life have been discovered, but observations of the same kind have shown that their removal has been followed by health and longer, more vigorous life. The economic value of the population of several towns has been increased by sanitary measures. The truths established, the facts ascertained, the remedies discovered in the thirty-nine years past await their full administrative applications in the years to follow ; and the savings of time wasted in sickness, as well as of precious lives prematurely lost in youth and manhood, will enhance the value of the population to an incalculable extent. The famines so fatal in Ireland are not likely to recur ; part of the population has emigrated to England or to America, and the intelligent landowners of Ireland through the extension of the Poor Law now insure their countrymen against death by starvation. The same beneficent law has in the thirty-nine years been extended to the Highlands of Scotland. Every improvement in health recorded makes it clearer and clearer that the gloom of sickness and premature death flies away before sanitary measures ; and when the qualified health officers whom the Universities are offering to examine, are in suitable positions under enlightened local authorities all over the country they will no doubt prove as efficient in preventing as their medical brethren are in treating sickness. The result on human happiness cannot be calculated ; but a future Industrial Census will show in a very definite shape its effect in raising the economic value of the population. The mean lifetime by the English Life Table is 40·86 years ; by the Healthy Life Table it is 49·0 years, which is attainable in every well organized State. It is fair to assume that if a fifth part be added to the mean lifetime, at least a fifth part will be added to the worth of a living and labouring population. Upon this estimate £1,050 million will be added to the economic value of the population of the kingdom. Its value will increase with its numbers, and so will the value of its emigrating thousands.

The increase of the population and of the wealth of Europe has been going on in the 39 years simultaneously with the increase of the United Kingdom ; but its wealth at a slower rate. In watching over, and thus in endeavouring to promote, the general health, I have invited the co-operation of the authorities of all the great cities, and I have met with the most cordial response ; thus, Vienna, Berlin, and Paris first gave in their adhesion ; Rome, and finally St. Petersburgh followed. France, Switzerland, Belgium, Holland, Denmark, Sweden, Norway, Russia, Germany, Austria, Hungary, Italy, Egypt, have taken part in this movement ; Turkey is the only power that has stood aloof. As the outbreak of an epidemic in any one of the States of Europe may extend wide like a conflagration so there is a solidarity among them ; and every capital city has its watch-tower. It has been particularly gratifying to have associated with me in this enterprise, out of Europe, the three great cities of India ; and three great representative cities of our brethren across the Atlantic.

There is now a generous rivalry among all these States ; city is competing with city in salubrity. They are instituting comparisons with each other. And as the glory of armies in the field is measured by the number of their foes slain and wounded so the glory of municipalities is measured by the number of lives saved and victims of fever rescued by their hygienic strategy. The numerical tests are growing more definite and are used more frequently every day. Every day discoveries made in one country are made the common property of all ; as the railways and telegraphs, so the discoveries of Jenner, of Snow, of all sanitary workers, are become European property. Every race benefits by the well-being of other races ; and in these struggles for a better life English, French, German, Italian, and Russian nations can do each other no injury. They are brethren.

I now proceed to show in some detail the facts for England and Wales relating to birth, marriage, and death in the year, as compared with the state of things in other years, and in other countries. The Tables will

show the local authorities and men of science a great many particulars respecting the divisions, counties, districts, and sub-districts into which the country has been divided.

I shall first notice the emigration of population.

*Emigration from the United Kingdom.**—During the year 1876 the number of emigrants continued to decline, while the influx of immigrants was nearly as great as in the previous year.

In the annexed table it will be observed that the total emigration in 1876 was the lowest on record during the 14 years 1863–76.

TABLE 1.—EMIGRANTS of VARIOUS NATIONALITIES, 1863–1876.

YEARS.	Of British origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	28,619	6,291	209,801
1866	58,856	12,307	98,890	170,053	26,691	8,138	204,882
1867	55,494	12,866	88,622	156,982	31,193	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	105,293	22,935	74,283	202,511	48,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,843	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,490	20,286	60,496	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,347	1,787	173,809
1876	73,396	10,097	25,976	109,469	25,584	3,169	138,222

The total number of emigrants in 1876 was 138,222, against 173,809 in the previous year, but the number of emigrants of *British origin*, after adding a certain proportion of 3169 whose birthplaces were not distinguished was 112,045 (against 142,112 in the previous year, showing a decrease of 30,067), of whom 75,435 were English, 10,281 Scottish, and 26,329 Irish.

TABLE 2.—NATIONALITY of BRITISH EMIGRANTS, 1853–1876.

PERIOD.	Of 100 Emigrants of British origin, the Number of each Nationality.		
	English.	Scotch.	Irish.
Three years 1853–55 - -	30	9	61

„ 1866–70 - -	43	10	47
„ 1871–75 - -	56	10	34
Year 1876 - - - -	67	9	24

One of the most remarkable features in the returns of 1876 is the comparatively small number of Irish who emigrated, chiefly to the United States, the proportion being only 24 per cent., against 34 per cent. in 1871–5, and 58 per cent. in 1861–5.

* These results only relate to the movement of population between the United Kingdom and places out of Europe. See Mr. Giffen's report to the Board of Trade relating to Emigration and Immigration from and into the United Kingdom in 1876.

While emigration to Australasia during the last two or three years had been comparatively steady, that to the United States and to British North America had greatly diminished, indeed nearly the whole of the great falling off in the number of emigrants in 1876 occurred among those bound for the United States and for British North America. As regards the diminution of emigrants to the United States and to British North America, Mr. Giffen remarks that emigration for *permanent settlement* had fallen to the smallest dimensions if it had not altogether been suspended.

The number of emigrants of British origin who proceeded to all other places, chiefly to the Cape of Good Hope, to Natal, and to South America, was 13,384, and differed but little from the number in the previous year.

TABLE 3.—SHOWING the AVERAGE ANNUAL NUMBER of EMIGRANTS of BRITISH ORIGIN to each of the under-mentioned PLACES.

Year 1876 - - -	54,554	50	9,335	9	32,196	29	13,384	12	109,469

No correction has been made in the above table for those whose nationality was not distinguished.

The net annual loss of population at the *different ages* is unknown. For Australasia, however, whence the number of immigrants is comparatively small, it appears that the proportion of adult emigrants was about 79 per cent. of those whose ages were stated. The majority of the adult male emigrants to Australasia were labourers, and the majority of the single adult female emigrants were domestic servants.

The total immigrants in 1876 were 91,647, of whom 71,404 were of British origin. The number of emigrants of British origin was 109,469, the net loss, therefore, in 1876 was 38,065, which is probably less than in any previous year since the Irish exodus.

The records of immigration being much more complete for the year 1876 than for any previous year, the results in the subjoined table showing the balance of the account for persons of British origin will be studied with interest.

TABLE 4.—EXCESS of EMIGRANTS over IMMIGRANTS of BRITISH ORIGIN in 1876.

* Omitting immigrants at Plymouth whose nationalities were not distinguished.

The number of foreigners, after adding a certain proportion of those whose nationality was not distinguished, who passed through the United Kingdom to their destination in 1876 was 26,177, against 31,697 in 1875.

Increase of Population.—The natural increase of population in England and Wales in 1876, derived from the excess of births over deaths, was 377,653. The net loss to the population of the United Kingdom by excess of emigration over immigration was 38,065, about 73 per cent. of which (27,787) probably represents the proportion belonging to England and Wales. This number deducted from the natural increase of population gives 349,866 as the net gain in 1876, which approximates to the increase of population (301,425) during the twelve months, estimated from the actual rate of increase during the 30 years 1841–71.

Meteorology.—The most noteworthy phenomena of the year 1876 were heavy and frequent snowstorms throughout the country, and long periods of low barometer readings in March and December.

The severest snowstorm of the winter occurred on 14th April, when snow fell everywhere, and in such quantities in some parts as to overthrow a large number of telegraphic posts, so that telegraphic communication was stopped in many localities, and traffic generally impeded; some snow drifts were of great depth.

During the 57 days from the 5th February to the 1st April, with the exception of two days, the barometer readings were all below their averages, and at times were as much as one inch below the average for two and three days together. In the month of December, exclusive of four days, the readings were also below their averages, and on many days more than an inch below.

Frequent variations of temperature occurred during the year. Dividing the twelve months into well marked periods when the mean daily temperature was either in excess or defect of the average, it may be said that there were seven cold and eight warm periods. The mean temperature of the air for the year was 50°·1 or 1°·3 in excess of the average of 105 years.

The rain-fall for the five months ending 31st August was 4·6 inches below the average, while in November and December together the fall was as much as 4·6 inches above the average. The rain-fall for the year was 24·2 inches, or 1·2 inches below the average of 61 years.

Prices.—The years 1874–5 were periods of reaction from the high prices and wages in the prosperous years of 1871–3, and the year 1876 witnessed no return to general prosperity; reduced wages and commercial failures contributed to the depression of trade. The coal and iron trades especially suffered. Textile trades were unsettled, and there were fluctuations and distress in other branches of commerce.

In 1875 the harvest was very unsatisfactory, but foreign supplies of wheat were abundant, and no less than 51,876,517 cwts. were imported into the United Kingdom for home consumption; this is the largest importation on record. The harvest of 1876 was also unsatisfactory, and the quantity of wheat imported for home consumption was 44,454,657 cwts.* or 10,258,846 quarters† of the declared value of 23,178,011 *l.*, about 10*s.* 5*d.* per cwt. or 45*s.* 2*d.* per quarter. The winter of 1875-6 afforded a most unfavourable

* See Statistical Abstract for the United Kingdom, 1862–76, pp. 27 and 33.

† The average weights per quarter of corn, as adopted in the office of the Inspector-General of Imports and Exports, are as follow :—For wheat, 485⅛ lbs., or 4⅓ (4·3333) cwts.; for barley, 400 lbs., or 3½ cwts.; for oats, 308 lbs., or 2¾ cwts. Corn has been entered by weight instead of measure since September 1864. The duty was taken off wheat on 1st June 1869.

seed time, and the spring of 1876 was ungenial. The acreage under wheat in the United Kingdom was 3,124,342, or 11 per cent. less than in 1875.

The average price of wheat, 46*s.* 2*d.*, was low, for although it was exactly one shilling per imperial quarter higher than in 1875, still it was 19 per cent. lower than the average price in the four years 1871-4. In the 17th century the average price of 64 gallons of wheat, imperial measure, reduced in the ratio which the Windsor prices bore to the average prices given by the Receiver of Corn Returns was 40*s.* 7*d.*, in the 18th century it was 40*s.* 6*d.**

The average price of beef by the carcase at the Metropolitan meat market was $6\frac{5}{8}d.$, nearly the same as the previous year, when it was $6\frac{7}{8}d.$

The price of mutton was $7\frac{3}{8}d.$, exactly the same as in 1875; so the increased importation of meat, although it might have prevented further increase, has done nothing as yet towards the reduction of the high price of butchers' meat.

The number of animals, exclusive of cows, imported in 1876 was 1,298,108, of the value of 6,163,284*l.*

TABLE 5.—NUMBERS and VALUE of ANIMALS IMPORTED in 1875 and 1876.

ANIMALS.	NUMBERS.		VALUE.	
	1875.	1876.	1875.	1876.
			£	£
Oxen and Bulls -	173,705	168,958	3,737,588	3,554,480
Calves - - - -	38,729	44,098	184,603	208,941
Sheep and Lambs -	977,863	1,041,494	2,186,585	2,227,140
Swine - -	71,928	43,558	257,960	172,723
Total - -	1,262,225	1,298,108	6,366,736	6,163,284
Cows - - -	51,264	58,520	963,684	1,097,019
GRAND TOTAL -	1,313,489	1,356,628	7,330,420	7,260,303

In 1876 there was a large increase in the quantity of meat imported, which was 788,973 cwts. of the value of 2,112,445*l.* against 531,908 cwts. in 1875 of the value of 1,465,552*l.*

TABLE 6.—QUANTITY of MEAT IMPORTED in the Five Years, 1871-6.†

——	1871.	1872.	1873.	1874.	1875.	1876.
	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.
Beef, Salted or Fresh - - -	302,079	228,912	260,554	261,721	215,581	413,351
Meat, „ „ - -	42,340	55,354	79,841	119,403	144,954	92,556
Total - - -	344,419	284,266	340,395	381,124	360,535	505,907
Meat, Preserved otherwise than by salting - - - -	254,833	350,729	260,749	265,223	171,373	283,066
Total Meat - -	599,252	634,995	601,144	646,347	531,908	788,973

Thus the aggregate value of meat and of animals imported in the year 1876 was 8,275,729*l.*

* See Paper by Dr. Farr, F.R.S., on "The Influence of Scarcities and of the High Prices of Wheat on the Mortality of the People of England." Journal of the Statistical Society. Vol. IX., pp. 168–9.

† Exclusive of Pork, of which 378,607 cwts. were imported in 1876.

Pauperism.—The effects of the changes in the administration of the out-door relief of the poor continue to be visible in the returns for the year 1876. The average number of paupers returned on the last day of each week in each of the years 1875 and 1876 was—in-door 135,041 and 137,930 —out-door 579,169 and 531,341, showing a slight increase in the number of in-door paupers relieved (2·1 per cent.), but a considerable decrease (8·3 per cent.) in the number of out-door paupers relieved.

TABLE 7.—RESULTS of Six CENSUSES of PAUPERS taken on the 31st December of each Year, 1871–6.*

	Numbers.			Proportion to 10,000 of Population.		
	In-door.	Out-door.	Total.	In-door.	Out-door.	Total.
1871 - -	150,093	780,809	930,902	66	343	409
1872 - -	147,657	690,979	838,636	64	300	364
1873 - -	144,201	637,269	781,470	62	273	335
1874 - -	146,947	603,468	750,415	62	255	317
1875 - -	144,313	557,604	701,917	60	233	293
1876 - -	149,853	524,280	674,133	62	216	278

* Exclusive of lunatics in asylums; and vagrants.

The decrease in the numbers of paupers enumerated on 31st December in each year was from 1874 to 1875, 48,498, or 6·5 per cent.; from 1875 to 1876 it was 27,784, or 4·0 per cent.

In 1871 there were 409 paupers in receipt of relief to every 10,000 of population, whereas in 1875 the proportional number was 293, and in 1876 only 278. Nearly the whole of this reduction occurred under the head of out-door relief.

MARRIAGES.

201,874 marriages were solemnized in England and Wales in 1876, a number but little in excess of that in the previous year. The marriage-rate (persons married to 1000 of population) was 16·7, or ·1 less than in 1875, and ·1 less than the mean of the 10 years 1866–75.

During the year 1876 wages in many trades were reduced; there was no revival of industry, and commercial distress continued to prevail. In several respects 1876 was also a bad year for the farmer, fruit crops failed, and live stock suffered severely from drought.

Under such conditions as these it was not to be expected that the people would take a cheerful view of their prospects, so the marriage-rate was depressed.

Compared with the mean rate observed in the 10 years 1866–75, the depression was most conspicuous in the counties of Hertford, Buckingham, Huntingdon, Bedford, Cambridge, Cornwall, Gloucester, Hereford, Stafford, Worcester, Durham, Northumberland, Westmorland, Monmouth, and in South Wales. The counties in which an excess in the rate was most marked were Northampton, Warwick, Rutland, Nottingham, Derby, East Riding with York, Cumberland, and in North Wales.

Forms of Marriage.—201,874 marriages were celebrated during the year 1876; 148,910, or 73·8 per cent., according to the rites of the Establishment, and 51,964, or 26·2 per cent., otherwise.

Of the marriages according to the rites of the Established Church 33, or ·02 per cent., were by special license, 17,620, or 11·89 per cent., by license, 126,849, or 85·59 per cent., after banns, and 3,710, or 2·50 per

cent., by Superintendent Registrar's certificate. In 698 instances,* or ·47 per cent., the clergy omitted to state under which of the foregoing heads the marriages should be recorded: although this is a comparatively large number, still it is 149 less than the previous year, and the following results show that the number of such imperfect returns is gradually decreasing.

To every 1000 marriages according to the rites of the Established Church the number of cases in which the words "by license," "by banns," or "by Superintendent Registrar's certificate" were omitted:—

Years.	Mean Annual Number.
In the five years 1841–45	159
" " 1846–50	122
" " 1851–55	41
" " 1856–60	29
" " 1861–65	25
" " 1866–70	20
" " 1871–75	7
Year 1876	5

The returns continue to be most imperfect in the Eastern counties, 13·8 per 1000, and in the South-western counties 11·0. The proportional numbers of imperfect returns were also high in the South Midland counties 9·7, in the South-eastern counties 8·1, and in the Welsh Division 7·6. The proportional numbers were lowest in the North-western counties ·7, and in London 1·1.

The number of marriages by license increased from 15·42 per cent. in 1841–5 to 16·01 per cent. in 1856–60, and then gradually fell off to 11·89 per cent. in 1876. The number of marriages after banns declined from 83·28 per cent. in 1841–5 to 80·88 per cent. in 1856–60, after which period the number gradually increased, until in 1876 the proportion per cent. reached 85·59.

In the English Church for some reason or other opinion has, since 1861, set in favor of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation.

The subjoined table shows the results at different periods, after correction for imperfect returns by distributing proportionally the number of cases not stated under the different heads.

TABLE 8.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–76.

PERIODS OF FIVE YEARS.	MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.				
	Total.	Special License.	License.	Banns.	Superintendent Registrar's Certificate.
1841-45	100	·01	15·42	83·28	1·29
1846-50	100	·01	15·47	82·39	2·13
1851-55	100	·01	15·58	81·53	2·88
1856-60	100	·01	16·01	80·88	3·10
1861-65	100	·01	14·93	81·94	3·12
1866-70	100	·01	13·56	83·43	3·00
1871-75	100	·01	11·58	85·71	2·70
Year 1876	100	·02	11·89	85·59	2·50

* These 698 cases have been proportionally distributed over the foregoing headings.

Of the 52,964 marriages not according to the rites of the Establishment, 8,577, or 16·19 per cent., were solemnized in the registered places of Roman Catholics, 22,164, or 41·85 per cent., in the registered places of other Christian denominations, and 21,709, or 40·99 per cent., in the offices of Superintendent Registrars without any religious rite. Fifty-five, or ·10 per cent., were celebrated according to Quaker rites, and 459, or ·87 per cent., were marriages of Jews.

First Marriages; Re-marriages.—Of the 201,874 men who married in 1876, 173,438 were bachelors, and 28,436 were widowers; 164,271 of the bachelors married spinsters; the remaining 9167 bachelors married widows. Of the 28,436 widowers who re-married 16,726 chose spinsters, and 11,710 chose widows.

Of the 201,874 women who married, 180,997 were spinsters, and 20,877 were widows; 164,271 of the spinsters were wedded to bachelors, and the remaining 16,726 to widowers. Of the widows, 11,710 were re-married to widowers, and 9167 to bachelors. The *number of persons* who re-married in 1876 was 49,313.

The number of marriages of divorced persons in 1876 was 90, or 21 more than in 1875. Of 57 divorced men who re-married, 49 married spinsters, and 8 married widows. Of 33 divorced women who re-married, 20 married bachelors, and 13 married widowers.

Ages at Marriage.—For the solution of many important social problems, especially in relation to population, it is necessary that the precise age at marriage should be returned, and it is much to be regretted that of the 201,874 couples who married in 1876 the precise ages of both parties were stated in 155,777 instances only; the age column of the marriage register in 46,097 cases being filled in by the Officiating Minister or by the Registrar of Marriages with the words "of full age," "minor," or "under age."

It is true that the returns are less imperfect now than they were in some previous years, but the improvement is slow, and the ages of both parties were not returned in 1876 in 23 per cent. of the total marriages; a reduction of only 3 per cent. on the proportion in 1874.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table:—

TABLE 9.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1857–76.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1857	40·9	1867	33·5
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8

The returns, as to age, are more complete in the mining and manufacturing counties than in and around London. In Yorkshire the ages of both parties were omitted to be stated in only 8·0 per cent. of the total marriages, in the Northern counties the proportional number was 11·2, in Monmouthshire and Wales 14·5, and in the North-western counties 15·7, while in London—although there is some improvement since the year 1874—the returns are still very imperfect, the proportional number of cases in which the ages of both parties were not stated being 43·9. In the surrounding counties, viz., the South-eastern and South Midland, the respective proportions were also high—27·7 and 28·3 per cent.

The annexed table shows the proportion of imperfect returns in each of the years 1874 and 1876 in each registration division of England and Wales :—

TABLE 10.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1874 and 1876.

GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	
	1874.	1876.		1874.	1876.
Yorkshire	10·7	8·0	Eastern Counties	28·3	26·0
Northern Counties	14·6	11·2	South Western Counties	28·2	26·8
Monmouthshire and Wales	14·6	14·5	South Eastern Counties	28·2	27·7
North Western Counties	18·1	15·7	South Midland Counties	31·3	28·3
West Midland Counties	21·6	20·1	London	52·8	43·9
North Midland Counties	24·7	21·9			

The number of cases in which both parties are unwilling, or unable to state their ages when married, must be comparatively small, and if the ages can be returned in Yorkshire in 92 per cent. of the total marriages, no doubt the same desirable result can be obtained in London, where, at present, the proportional number of cases in which the ages of both parties were returned was only 56 per cent.

A certificate of marriage expressing the precise age of both parties identifies them to a certain extent, and is much more valuable than a certificate merely distinguishing them as minors or of full age.

At the time of registering the marriage it might be stated that it is important to the parties themselves to return their precise ages, not only for tracing pedigree, but for other purposes of personal identification.

The services rendered by the clergy in connection with registration under the Marriage Acts have done much towards perfecting the national records, but their value might be still further enhanced if they would cause the precise ages to be returned.

The mean age at marriage as determined from the 311,554 men and women whose ages were stated in the year 1876, including the re-married, was 28·0 years for men, and 25·8 years for women. For 135,685 bachelors it was 25·7 years, and for 140,680 spinsters 24·4 years. The mean age at marriage of 20,092 widowers was 43·1 years, and of 15,097 widows 39·5 years. These results are almost exactly the same as those for the year 1867.

TABLE 11.—ENGLAND.—MEAN AGES at MARRIAGE of 311,554 Persons whose AGES were specified in the MARRIAGE REGISTERS of the Year 1876, distinguishing their previous Civil Condition.

Number of Couples.	Previous Civil Condition of Persons married.			Mean Ages at Marriage.		The mean Age of the Husbands exceeded that of the Wives by *
	Husbands.		Wives.	Husbands.	Wives.	
155,777	Men	Marrying	Women	28·0	25·8	2·2
140,680	„		Spinsters	26·6	24·4	2·2
15,097	„		Widows	41·1	39·5	1·6
135,685	Bachelors		Women	25·7	24·2	1·5
128,994	„		Spinsters	25·4	23·7	1·7
6,691	„		Widows	32·5	34·4	−1·9
20,092	Widowers		Women	43·1	36·8	6·3
11,686	„		Spinsters	39·6	31·9	7·7
8,406	„		Widows	47·9	43·6	4·3

* The *minus sign* denotes that the mean age of the wives exceeded that of the husbands.

The above table shows that in 128,994 instances in which bachelors married spinsters, the mean age of the husbands at marriage was 25·4 years, and that of the wives was 23·7 years, the mean age of the men exceeding that of the women by 1 year and $\frac{7}{10}$ths.

TABLE 12.—ENGLAND.—MEAN AGES at MARRIAGE of 311,554 Persons whose AGES were specified in the MARRIAGE REGISTERS of the Year 1876, distinguishing their previous Civil Condition; and, in the case of the Women, those who were under 45 from those above that Age (assuming 45 as the limit of the Child-bearing Ages).

Number of Couples.	Previous Civil Condition of Persons married.			Mean Ages at Marriage.		The mean Age of the Husbands exceeded that of the Wives by *
	Husbands.		Wives.	Husbands.	Wives.

6,024	„		Widows under 45	31·0	32·6	−1·6
667	„		„ over 45	45·3	50·8	−5·5
15,450	Widowers		Women under 45	39·3	32·1	7·2
4,642	„		„ over 45	55·7	52·5	3·2
10,669	„		Spinsters under 45	38·1	30·1	8·0
1,017	„		„ over 45	55·5	50·5	5·0
4,781	„		Widows under 45	42·0	36·4	5·6
3,625	„		„ over 45	55·7	53·1	2·6

* The *minus sign* denotes that the mean age of the wives exceeded that of the husbands.

The above table shows that in 128,651 instances in which bachelors *married spinsters under 45 years of age*, the mean age of the husbands

at marriage was 25·3 years, and that of the wives was 23·6 years, the mean age of the men exceeding that of the women by 1 year and $\frac{7}{10}$ths. In 343 instances in which bachelors *married spinsters over 45 years of age*, the mean age of the husbands at marriage was 50·0 years and that of the wives was 50·5 years, the mean age of the women exceeding that of the men by half a year.

In my last Report I pointed out that the increasing tendency to early marriage was accurately shown by comparing the number of men and women who married under age with the *numbers living*, but a comparison of the number of minors married to the *total marriages* indicates, though less accurately, that these marriages of minors are increasing. The counties which generally show the highest proportions of marriages of minors were enumerated in my last report.

16,655 males and 44,401 females married in 1876 under 21 years of age; therefore to every 100 males married 8·25 were under age, and to every 100 females married 21·99 were under age.

The annexed results show the proportions in periods of 5 years since 1841. The rate of increase is greatest among men.

TABLE 13.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841–76.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841–45	4·38	13·33
1846–50	4·48	14·23
1851–55	5·45	17·28
1856–60	5·94	18·65
1861–65	6·55	19·87
1866–70	7·08	20·84
1871–75	8·15	22·22
Year 1876	8·25	21·99

Signature in Marriage Registers.—The men and women now married were educated some years since, and the benefit of increased elementary education in former years is reflected year by year in the decreasing number of men and women who sign the marriage register with marks. The improvement, however, is slow, for 77,536, or 19·2 per cent. of the 403,748 persons who married in 1876, still signed the marriage register with marks.

The men are better educated than the women, for while 32,998 of the men signed with marks, 44,538 of the women could not write their names. The proportion to every 100 marriages being 16·3 for men, and 22·1 for women, against 17·2 and 23·2 respectively in the previous year.

These proportions are rather more than half what they were 25 years ago, when 30·8 per cent. of the men and 45·3 per cent. of the women were unable to write. A steadily increasing number of children have passed through school during the last quarter of a century, and some of the good resulting therefrom is recording itself in the marriage registers.

The gradual improvement that has taken place is shown in the subjoined table.

TABLE 14.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS, 1841–76.

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.	
	Men.	Women.	Men.	Women.
1841–45	32·6	48·9	1·2	2·7
1846–50	31·4	46·2	1·2	2·7
1851–55	30·2	43·5	3·1	5·4
1856–60	27·1	38·1	3·5	5·2
1861–65	23·6	32·9	3·1	4·6
1866–70	20·5	28·3	2·0	3·1
1871–75	18·5	25·2	—	—
Decrease in the 35 years 1841–75			15·5	25·6
Year 1876	16·3	22·1	—	—

In 17,393 instances *both* the husband and the wife signed with marks, and in 42,750 cases either the husband or the wife was unable to write.

The subjoined table shows the state of elementary education, as indicated by the proportional number of men and women who signed the marriage register with marks, in the different divisions of the United Kingdom for the most recent years for which the abstracts have been published.

TABLE 15.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS in different DIVISIONS of the UNITED KINGDOM.

——	Years.	To every 100 Marriages the proportion who signed the Marriage Register with Marks.	
		Men.	Women.
ENGLAND AND WALES	1875	17·2	23·2
	1876	16·3	22·1
SCOTLAND	1872	10·4	20·5
	1873	9·6	18·7
IRELAND	1875	30·3	36·7
	1876	31·9	37·3

In the year 1876 London shows the greatest proficiency among men, for there the proportional number who signed with a mark was only 8·1 per cent.; then follow the counties of Westmorland 8·7, Middlesex (*extra-metropol.*) 10·5, Surrey (*extra-metropol.*) 10·7, Northumberland 11·0, East Riding with York 11·5, Hants 11·9, Devon 12·6, and Cumberland 12·7. The proportional numbers in the following counties indicate that elementary education among men has been much neglected, Stafford 28·9, Monmouth 28·0, Bedford 25·9, Suffolk 25·5, North Wales 24·6, Herts 24·5, Norfolk 24·3, Cambridge 23·1, and Hereford 23·1.

In the agricultural counties, as a rule, the women are better educated than the men, but the converse of this is the case in the mining and manufacturing counties, where the proportional number of women who signed with a mark was excessively high; thus in the West Riding of York the proportion per cent. was 29·5; in Durham it was 29·8, Bedford 30·2, North Wales 31·3, Monmouth 31·9, Lancaster 32·7, Stafford 35·7, and in South Wales 37·2.

The number of elementary day schools visited by the inspectors for the purpose of annual grants, during the year ending 31st August 1876, was 14,273, affording accommodation for 3,426,318 scholars.* The names of 2,943,774 scholars were entered on the school registers, a number approximating to the three millions and a quarter, who it is assumed at least ought to be receiving daily instruction at public elementary schools.† 2,412,211 scholars were present on the day of inspection, but only 58 per cent. of the accommodation provided was utilized, for the daily average attendance was but 1,984,573.

The provision for accommodation of scholars in 1869 was only 8·3 per cent. of the whole population; in 1876 the proportion had increased to 14·1 per cent.; additional accommodation having been provided in the seven years 1869–76 for 1,660,374 children.

602 schools were inspected, in addition to the above, but they did not fulfil the conditions on which annual grants are made; the number of scholars present on the day of inspection in these schools was 36,088.

In 1474 night schools the average nightly attendance was 49,858, bringing up the average attendance in aided schools (day and night) to 2,034,431.

Buildings registered for Marriages.—The number of these buildings registered in 1876 was 201, bringing up the total number on the register at the end of the year to 7796.

Certified Places of Worship.—The number of buildings certified for religious worship during the year 1876 not being churches or chapels of the Established Church was 543. The number on the register on 31st December 1876 was 19,064, being less than at the end of the previous year, in consequence of the register having been revised and the registration of a large number of disused buildings cancelled. The following

* See Report of the Committee of Council on Education, 1876-7, pp. vii-xi.

† It was estimated by Dr. Farr—from a Return by the Inland Revenue Department, showing the number of houses of the assessed annual value of 20*l.* and upwards in the year ending 5th April 1864–65—that the proportional number of children in England and Wales belonging to the middle and upper classes was 15 per cent., and it is remarkable how closely this proportion agrees with that for London, deduced from the facts published by the London School Board; thus, the number of children aged 3 and under 13 years, furnished by the Registrar General from the Census Returns of 1871, was 681,101, and the number of children returned by the Board as "not requiring elementary schools" as they were attending schools where the weekly fee exceeded nine-pence, was 97,307 (exclusive of 9,101 in institutions), the proportion being 14·3 *per cent.*; so about six sevenths, or six out of seven children, belonged to the class who *should* attend public elementary schools.

is a list of the various titles of religious denominations whose places of worship have been certified to the Registrar General. The names printed in italics have been added since the publication of the list in my last Report.

BIRTHS.

The Registration Act of 1874 has now been in force two years, and the results of the registration of births for the year 1876 apparently indicate that the administration of the new Act has operated in a satisfactory manner. 887,968 births were registered during the twelve months, against 850,607 in the previous year, showing an increase of 37,361. Owing to delay in registration, it is probable that a certain proportion of the excess belongs to the previous year, but it is believed that a large proportion of the births that formerly escaped registration altogether is now recorded in the national registers. The birth-rate was the highest on record, being 36·6 per 1000 of population, or 1·2 per 1000 above the average rate for the 10 years 1866–75.

The results in the subjoined table show that the sudden and remarkable migration of married women of the child-bearing ages from the agricultural districts to the counties containing the great centres of mining and manufacturing industries of the country, which began in 1873, still continued in 1876.

TABLE 16.—REGISTRATION COUNTIES showing (1864-73 and 1876) respectively HIGH and LOW BIRTH RATES.

REGISTRATION COUNTIES, &c.	BIRTHS to 1000 Persons living.	
	Mean of the 10 Years 1864–73.	1876.

Bucks - - - -	33·9	32·9

Children born out of wedlock.—The number of illegitimate births registered in England in the second year of compulsory registration was 41,594, and although this is 781 more than the number in 1875, it is considerably less than that recorded in previous years, for illegitimacy has decreased in England; thus the proportion per cent. of illegitimate to total births has declined from 6·4 in the 10 years 1856–65, to 5·5 in the 10 years 1866–75, to 4·8 in the year 1875, and to 4·7 in the year 1876.

The rate of illegitimacy was lowest in 1876 in the extra-metropolitan part of Middlesex, where it was only 3·3 per cent. In London it was 3·6; then follow the counties of Essex 3·7, Monmouth 3·7, and Warwick 3·8. In the mining county of Durham the rate was low, 3·8 per cent., and the proportional number of spinsters aged 20–40 to total women living in 1871 was, as will be seen by reference to Table 17, also remarkably low. In the extra-metropolitan part of Surrey the rate of illegitimacy was 4·0, in the extra-metropolitan part of Kent 4·2, Northampton 4·3, Hants 4·4. In the manufacturing county of Stafford the rate was also comparatively low, 4·4, and so was the proportional number of spinsters.

The highest rates were in the counties, &c. of Salop 8·5, Norfolk 8·5. Cumberland 7·8, Hereford 7·7, Westmorland 7·6, North Wales 6·9, Bedford 6·3, and Cornwall 6·1. In each of these counties the proportional number of spinsters aged 20–40 to total women living in 1871 was also very high. The results in the manufacturing county of Nottingham were exceptional, for there the rate of illegitimacy was 6·1, while the proportional number of spinsters was comparatively low.

TABLE 17.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES, &c. of ENGLAND and WALES in 1856–65, 1866–75, and in 1876.

[Counties arranged according to rates prevailing in 1876.]

REGISTRATION COUNTIES, &c.	Children born out of Wedlock to every 100 Births.			Decrease per cent. in 1876 compared with the Mean of the previous 10 Years 1866–75.	Proportion of Spinsters aged 20–40 to every 100 Women living at the same Age in 1871.
	Mean of 10 Years 1856–65.	Mean of 10 Years 1866–75.	Year 1876.

Derbyshire	7·5	6·1	5·2	14·8	33·4
Devonshire	5·8	5·6	5·3	5·4	43·1
Northumberland	7·7	6·5	5·3	18·5	36·5
Oxfordshire	7·1	6·3	5·5	12·7	39·9
North Riding of York	9·1	8·3	5·5	33·7	38·7
East Riding (with York)	7·7	6·9	5·7	17·4	35·1
Lincolnshire	8·2	7·1	5·8	18·3	37·0
Suffolk	8·0	6·8	5·9	13·2	36·8
Cornwall	5·6	6·4	6·1	4·7	43·1
Nottinghamshire	9·2	7·5	6·1	18·7	35·7
Bedfordshire	7·9	7·6	6·3	17·1	41·7
North Wales	8·0	7·6	6·9	9·2	41·5
Westmorland	10·0	8·7	7·6	12·6	43·6
Herefordshire	8·7	7·8	7·7	1·3	41·3
Cumberland	11·4	10·1	7·8	22·8	42·0
Norfolk	10·6	9·4	8·5	9·6	39·0
Shropshire	9·6	9·1	8·5	6·6	40·9

The improvement that has taken place in the various counties, &c. is shown in Table 17; thus the decrease per cent. in the rate in 1876 compared with the mean rate in the 10 preceding years was as much as 34 in the North Riding of York, 23 in Leicester, 23 in Cumberland, 21 in Essex, South Wales, and Berks, 20 in Northampton, Stafford, and Wilts, and 19 in Hunts, Warwick, Durham, Herts, and Notts. In some of the counties very little improvement is observed; thus in Hereford the decrease was only about one per cent., in Cornwall and Devon 5, in Salop 7, Hants 8, Bucks, Sussex, and North Wales 9 per cent.

The relation between the illegitimate births and the proportiona. number of spinsters in different counties is more strikingly exhibited if the counties in Table 17 are arranged in groups in the order of the rate of illegitimacy.

Registration Counties, &c.	Children born out of Wedlock to every 100 Births. Year 1876.	Proportion of Spinsters aged 20–40 to every 100 Women living at the same Age in 1871.
1st Group of Ten -	3·9	36·1
2nd Group of Ten -	4·6	37·9
3rd Group of Ten -	5·0	39·1
4th Group of Ten -	5·9	38·6
5th Group of Six -	8·0	41·3

Deaths.

In the year 1875 the mortality had been high (22·8 per 1000 of population), the winter unusually severe, and cold winds, with extremes of temperature, had proved very fatal to infants and to elderly people; the rain-fall had been excessive, at Greenwich it measured 28·2 inches, or 4·1 inches above the average of 27 years.

In the year now under review (1876) the meteorological conditions were more favourable to health; it is true that there were unusual and frequent falls of snow in the first four months of the year, but the weather was milder; the variations in the temperature though frequent, especially in the first three months of the year, were not so sudden; the rain-fall was about the average. The deaths from small-pox and measles were more numerous than in the preceding year, still it cannot be said that any epidemic was *unusually* prevalent; 510,315 deaths were registered during the year out of an estimated population of 24,244,010, so the mortality was at the rate of 21·0 per 1000. This is the lowest death-rate during the last 20 years, and, with three exceptions, the lowest on record. Compared with the mean annual rates of mortality in the five preceding years there was a reduction in the death-rate in 1876 in the town districts of 5 per cent., while the reduction in the rural registration districts was only 3·6 per cent.

Sex and Age.—Of the 510,315 deaths registered in 1876, 265,076 were males, and 245,239 were females. The mortality of males was at the rate of 22·5 per 1000 of the male population, the mortality of females at the rate of 19·7 per 1000 females living, the average rates in the 25 years 1848–72 being 23·5 for males and 21·4 for females. The deaths of males in the year were as 108 to 100 deaths of females; the average being 104 to 100.

The last enumeration of the people in 1871 shows that there was an excess in the number of females living over that of males; but the deaths in 1876 out of an *equal number of both sexes living* were in the proportion of 114 deaths of males to 100 deaths of females.

A comparison of the death-rates at different ages in 1876 with the average annual rates in the 25 years 1848–72 shows that the reduction at all ages was mainly due to a much lower rate among children, and among persons at ages under 35 and over 75 years.

Compared with the previous year the rates were less at every age. This was probably due to atmospheric causes.

Seasons.—Three cold periods of unequal length prevailed during the first three months of the year extending over 41 days; the intervening periods were warm, but the mean temperature of the quarter (39°·8) was only one degree above the average of the preceding 105 years. 142,218 deaths were registered during these three months; the temperature was variable, but the mortality was not high for the winter quarter,

being at the annual rate of 23·5 per 1000 of the estimated population, or 1·1 below the average for the corresponding quarter of the 10 years 1866–75, and no less than 4·0 per 1000 below the rate of the corresponding quarter of the previous year. The rain-fall of the quarter, measured at the Royal Observatory, Greenwich, was exactly the same as the average of 61 years, viz. 4·9 inches.

Notwithstanding the cold weather which prevailed in the second quarter of the year, the mortality was 0·5 per 1000 below the average 1866–75, the 126,239 deaths registered being equal to an annual rate of 20·9 per 1000. From 10th to 19th April the weather was more or less severe with heavy snow storms. In London there was a succession of snow storms. On 13th and 14th April unusually severe weather was experienced all over the country, and a great quantity of snow fell; in some places it was 16 or 24 inches deep; all traffic between London and the North was greatly delayed. From 30th April to 18th June the weather was generally cold. During the greater part of May there was a cold east, and north-east wind, and no rain fell for 20 days. For the 50 days ending 18th June the daily deficiency of mean temperature was nearly 3½°, but from the 19th June to the end of the quarter the average daily mean temperature was in excess; the mean of the quarter was 51°·7, or 1°·3 below the average of the preceding 105 years. The total rain-fall for the quarter at Greenwich was 3·5 inches, being 2·3 inches below the average of 61 years.

During the first 53 days of the third quarter of the year the weather was fine and warm; at times unusually high temperatures were experienced, but on 23rd August there was a complete change, the average daily deficiency of temperature until 17th September being 3½°, and rain fell continuously; from 18th September to the end of the quarter the weather was warm and wet. Although nearly 15,000 deaths were ascribed to summer diarrhœa, still the season was not unhealthy, for the 119,977 deaths registered were equal to an annual rate of mortality (19·6), 1·4 per 1000 below the average 1866–75. The mean temperature of the air for the quarter was 61°·8, or 2°·1 above the average of the preceding 105 years. At Greenwich the fall of rain was comparatively small, measuring only 5·3 inches, or 2·2 inches below the average of 61 years.

The mean temperature of the air in the last quarter of the year was remarkably high. Up to the 21st October the weather was warm and wet; the excess in the mean daily temperature was 5¼°. From 21st October to 12th November the weather was generally cold, and the defect in the mean daily temperature was 3¼°. From 13th November to the end of the quarter, with the exception of six days in December, the weather was more or less warm and wet. In December there were heavy and continuous falls of rain which produced great floods; and some severe gales were experienced. During this month 5·8 inches of rain fell at Greenwich, being 3·8 inches above its average; the total fall for the quarter was 10·5 inches, or 3·4 inches above its average. The extraordinary rain-fall and high temperature which prevailed during the quarter do not appear to have acted unfavourably on the public health, for the death-rate was 2·2 per 1000 below the average for the corresponding quarter in the ten years 1866–75, the 121,881 deaths registered being equal to an annual rate of 19·9 per 1000.

Locality.—In every county of England and Wales the rate of mortality in 1876 at all ages was lower than the average for the 10 years 1866–75, except in Hampshire, Cornwall, Herefordshire, Rutlandshire, Nottinghamshire, and Derbyshire, and in North Wales; and lower than the rate of the preceding year except in Hampshire and Rutlandshire.

The death-rate of England was 21·0 per 1000, and, taking this as a standard, there were 12 counties, &c. which had a rate higher than this. As usual Lancashire heads the list, then follow the West Riding of York,

Nottinghamshire, London, Staffordshire, Leicestershire, Derbyshire, North Wales, Cheshire, Northumberland, Cumberland, and Warwickshire. The mortality in the remaining counties, &c. was below that of England, and ranged from 16·2 in the extra-metropolitan part of Surrey to 20·9 in Durham.

TABLE 20.—COUNTIES with a MORTALITY in 1876 above that of ENGLAND AND WALES.

COUNTIES, &c.	Death-rate per 1000 of Population in 1876.
ENGLAND AND WALES -	21·0
Lancashire - - - -	26·1
West Riding of York - -	23·1
Nottinghamshire - - -	22·7
London - - - - -	22·3
Staffordshire - - - -	22·1

DEATH-RATES of CHILDREN.

Children under one year of Age.—In my last Report I drew attention to the high proportional number of deaths of children under one year of age to 1000 births in the eighteen large towns. In the year now under review (1876) the rates were lower than the preceding year in fifteen of these towns, but in Portsmouth, Wolverhampton, and Salford the rates were higher.

TABLE 23.—PROPORTIONAL NUMBER of DEATHS of CHILDREN under ONE YEAR of AGE from ALL CAUSES to 1000 BIRTHS REGISTERED in ENGLAND AND WALES, and in EIGHTEEN LARGE TOWNS, 1870–76.

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In England and Wales in 1876 the proportional number of deaths of infants to every 1000 births was 146. In Portsmouth it was 142, and this was the only large town where the rate was lower than that of England. In the remaining towns the proportions ranged from 152 in Sunderland, 153 in Bristol, and 157 in London, to 180 in Manchester and in Leeds, 189 in Salford, 200 in Leicester, and 208 in Liverpool.

Although the rates of infant mortality are still excessively high, it is gratifying to observe an improvement in the year 1876, compared with the average in the five years 1870–74 in these and several other towns; thus, the proportion fell in Liverpool from 239 to 208, in Leicester from 226 to 200, in Bradford from 202 to 174, in Newcastle from 193 to 167, in Leeds from 205 to 180, in Sunderland from 176 to 152, and in Manchester from 202 to 180.

Children under five years of Age.—The death-rate of children under five years of age in England in 1876 was 63 per 1000 of population, or 3·9 per 1000 less than the preceding year. In the seventeen large towns the rate in 1876 ranged from 69 per 1000 in Norwich and Sunderland to 98 in Liverpool and 113 in Salford.

NOTE.—The deaths of children under five years of age in sixteen of the above towns were supplied by the Medical Officers of Health.

The death-rate under five years of age increased in Portsmouth from 58 in the three years 1873–75 to 74 in 1876; in the latter year a severe epidemic of scarlet fever prevailed in this town, and the mortality from measles had also increased. In Wolverhampton the death-rate rose from 74 per 1000 in the three years 1873–75, to 78 in 1876, owing chiefly to an increase in the number of deaths registered from measles, diarrhœa, and lung diseases. In Salford and Oldham the mortality of children under five years of age also increased, but in the remaining towns the death-rate in 1876 was lower than the mean of the three preceding years.

In Newcastle-upon-Tyne the decrease in the mortality from 92 per 1000 in the three years 1873–75, to 72 in 1876, was chiefly attributable to a reduction in the number of deaths from whooping-cough, diarrhœa, convulsions, and atrophy.

In Nottingham the decrease in the mortality of children under five years of age, from 93 per 1000 in the three years 1873–75 to 86 in 1876, was mainly owing to a reduction in the deaths from measles, lung diseases, and atrophy.

In Birmingham the decrease in the mortality from 91 per 1000 in the three years 1873–75 to 74 per 1000 in 1876 was chiefly attributable to a reduction in the number of deaths from whooping-cough, diarrhœa, measles, scarlet fever, small-pox, and atrophy.

Deaths in Public Institutions in England.—The number of hospitals increased from 582 in 1875, to 611 in 1876, showing an increase of 29 during the year, nearly all of which were cottage hospitals. The abstracts relating to Public Institutions* show the number of deaths registered in

each registration division and county, and in each district and sub-district, in the year 1876. The total deaths registered in England and Wales amounted to 510,315, out of which number 46,235, or 9 per cent., occurred in 1410 of the public institutions of England and Wales. Of these 46,235 deaths, 29,268, or 63 per cent. occurred in 716 workhouses, workhouse infirmaries, or workhouse schools, 12,354, or 27 per cent. in 611 hospitals or infirmaries, and 4613, or 10 per cent. in 83 lunatic asylums, so of the total number of persons who died in England in 1876, one out of 11 took place in one or other of 1410 public institutions, one out of 17 occurred in a workhouse, one out of 41 in an hospital, and one out of 111 in a lunatic asylum. Only those deaths registered in workhouses, hospitals, infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions.

TABLE 25.—NUMBERS and PROPORTIONS of DEATHS in the DIFFERENT CLASSES of PUBLIC INSTITUTIONS in ENGLAND AND WALES in each of the Years 1869 and 1876.

Lunatic Asylums - -	72	3,569	7·2	138·6	83	4,613	9·0	110·6

The abstracts of Deaths registered in these public institutions situate in the several districts and sub-districts (published for the first time in 1869) afford the means of correcting the mortality, which in some districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

Deaths in Public Institutions in London.—A reprint of the table published in my annual summary for 1876, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.† In the 52 weeks of that year 14,073 deaths were registered in 165 public institutions. Of every 1000 of these deaths, 581 occurred in fifty-four workhouses, 5 occurred in eleven prisons, 6 in two military asylums, 316 in thirty-eight general hospitals, 34 in thirty-eight hospitals for special diseases, 7, viz., 2 women and 5 children, in five lying-in hospitals, 13 in four military and naval hospitals, 7 in three hospitals for foreigners, and 31 in ten lunatic asylums.

Of every 1000 deaths registered in London ten years ago (1866) 162·9 took place in one or other of 119 public institutions. Of this proportional number 88·5 occurred in forty-six workhouses, 1·2 in twelve prisons, 47·6 in sixteen general hospitals, 4·8 in nineteen lunatic asylums.

* See Introductory Note, p. 99.

† See Preliminary Table, No. 39.

In 1876, of every 1000 deaths registered in London, 181·8 took place in one or other of 165 institutions, viz., 105·6 in fifty-four workhouses, ·9 in eleven prisons, 57·4 in thirty-eight general hospitals, 5·7 in ten lunatic asylums; so of the total number of persons who died in London in the year 1876, one out of 6 took place in one or other of 165 public institutions, one out of 9 occurred in a workhouse, one out of 1122 in a prison, one out of 17 in an hospital, and one out of 176 in a lunatic asylum.

TABLE 26.—NUMBERS and PROPORTIONS of DEATHS in the DIFFERENT CLASSES of PUBLIC INSTITUTIONS in LONDON in each of the Years 1866 and 1876.

PROGRESS OF REGISTRATION.

Names on the Registers and Searches.—During the year 1876 the names of 1,802,031 persons, whose marriages, births, and deaths were registered, were added to the printed alphabetical indexes of this office, bringing up the number of names indexed in 39½ years to 55,880,349.

The results in the subjoined table are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

TABLE 27.—TOTAL and AVERAGE ANNUAL NUMBER of SEARCHES, 1845–76.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845–9 -	4,758	952	In the year 1845 -	8·0

In the year 1875 -	25,407	25,407	„ 1875 -	47·0
„ 1876 -	26,762	26,762	„ 1876 -	47·9

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, and for boys about to be employed as messengers, &c. for post office purposes.

Of the 26,762 searches in 1876, certificates were issued in 20,988 instances, namely, 9492 registration certificates of births, 8479 of deaths, and 3017 of marriages.

The total number of searches in 1876 (including those relating to the non-parochial and other records) was 27,590, and the number of certificates issued was 21,637.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1876 was 4,109*l.* 15*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi–ii.

United Kingdom.

The population of the United Kingdom is now estimated to have reached 33,000,000 (about 4,000,000 less than the enumerated population of France), 73 per cent. of which belonged to England and Wales, 11 per cent. to Scotland, and 16 per cent. to Ireland.

The number of emigrants from Ireland in 1876 was 38,315, or 14,082 less than in 1875. Of this number 728 were natives of other countries. It is noteworthy that a point has been reached where emigration has ceased to reduce the population of Ireland, for the number of inhabitants in 1876, estimated by the Registrar-General of Ireland, was 5,321,618, against 5,309,494 in the previous year, showing a slight estimated increase of population for the first time since the year 1845.

The estimated population of Scotland at the middle of 1876 was 3,527,811.

The number of persons whose marriages were registered in the United Kingdom in 1876 was 509,650. The number of births was 1,155,186, and the number of deaths was 676,761, so the natural increase of population by the excess of births over deaths was 478,425. After deducting the net loss to the population by excess of emigrants of British origin over immigrants of British origin, this number is reduced to 440,360.

The marriage-rate of the United Kingdom in the year 1876 was 15·4 per 1000, but this requires correction for defective registration in Ireland, for owing apparently to the neglect of the Roman Catholic clergy the number of marriages unregistered under the 26 & 27 Vict. c. 90. is still numerous.*

Owing to the difference in the marriage laws in Scotland as to registration, the marriage-rate in England was considerably higher than that of Scotland; the respective rates being 16·7 and 15·1 per 1000.

The English birth-rate was 36·6 per 1000 of population, the Scottish 35·9, and the Irish 26·4. As the proportion of married women aged 15 and under 55 to the female population at all ages is considerably lower in Ireland than in England, the number of legitimate births in Ireland must necessarily be less than the number in England.

The English and Scottish death-rates were exactly the same, 21 per 1000 of population. The Irish death-rate, owing chiefly to defective registration, was only 17·3.

* See Twelfth Annual Report of the Registrar General of Ireland, p. 31.

Mortality of the Army.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1876 was 184,433, and the number of deaths was 2102; so the rate of mortality was 11·4 per 1000 of strength, or 0·9 per 1000 below the rate in the preceding year.

The average strength of the Army at home was 97,146, and the deaths were 930: the rate of mortality per 1000 strength was 12·4 among officers, and 9·4 among non-commissioned officers and men, the average annual rates in the 15 years 1861–75 being 9·9 and 11·1 respectively, so the mortality among officers serving at home in 1876 was 2·5 per 1000 above the average, while that of the non-commissioned officers and men serving at home was 1·7 per 1000 below the average.

Table 28. — Annual Rate of Mortality per 1000 among Officers and Non-commissioned Officers and Men in the Army at Home and Abroad, 1861–76.

Years.	At Home.		Abroad.	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.
Annually in the 15 years 1861–75	9·9	11·1	13·9	18·1
In the year 1876	12·4	9·4	13·2	13·4
Excess or defect in 1876	+2·5	−1·7	−·7	−4·7

The average strength of the Army abroad was 87,287, and the deaths were 1172. The rate of mortality per 1000 of strength was 13·2 among officers, and 13·4 among non-commissioned officers and men, against an average annual rate in the 15 years 1861–75 of 13·9 and 18·1 respectively. The mortality among officers serving abroad in 1876 was, therefore, ·7 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 4·7 per 1000 below the average.

Thirty-eight per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 48 per cent. abroad.

Mortality of the Navy.

Deputy Inspector-General T. R. Pickthorn, of the Royal Navy, reporting to Sir A. Armstrong, K.C.B., M.D., the Director-General of the Medical Department, on the sanitary condition of the service afloat in the year 1876, states that—

The total force in the service afloat was 45,010; the deaths were 416; so the mortality was 9·2 per 1000 force.

Compared with the preceding year there was an increase in the mortality of ·4 per 1000; in the cases of disease and injury of 38·6 per 1000, and of invaliding of 1·9 per 1000.

Compared with the average for 13 years there was a decrease in the death-rate of 1·4 per 1000, and in the cases placed on the sick list of 41·8 per 1000. In the ratio of invaliding there was an increase of 2·0 per 1000.

The number of deaths in the total force from disease was 270, and from wounds, injuries, and drowning 146. The death-rate from disease alone was 6·0, and from violence, including drowning, 3·2 per 1000, against 6·9 and 1·9, respectively, in 1875.

Of the 270 deaths from disease, 19 were referred to enteric fever, 4 to simple continued fever, 3 to yellow fever, 11 to remittent fever, 1 to cholera, 48 to consumption, 20 to heart diseases, 14 to aneurism, 25 to pneumonia, 13 to dysentery, 21 to other diseases of the digestive organs, 6 to kidney diseases, and 3 to delirium tremens. In every 100 deaths 35·1 were from drowning and other violence.

Of 100 deaths at all ages, forty-one were aged 15–25, thirty-one were aged 25–35, twenty-one were aged 35–45, and seven were aged 45 years and upwards.

The mean force employed on the *home* station was 20,800, and the deaths were 197, being in the proportion of 9·5 per 1000, against 7·5 in the previous year. The mortality from disease on this station was 5·8 per 1000 force, from violence 3·7 per 1000; against 6·3 and 1·2 in the previous year. The increased mortality from violence was chiefly owing to a boiler explosion in Her Majesty's Ship "Thunderer," whereby 35 officers and men lost their lives.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88. commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me, and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book kept for the purpose at this office called the Marine Register Book. The numbers recorded in the year 1876 were 469 births and 4208 deaths.

364 births of children and 738 deaths (including 3 of soldiers, marines, or seamen from the Royal Navy) occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The number of mariners at sea, exclusive of masters, in registered vessels, in the year 1876 as reported by the Registrar-General of Shipping and Seamen, was 198,638. The deaths (including some of those which occurred on board colonial and fishing vessels) were 4151, and the rate of mortality was 20·9 per 1000 of the registered strength. The average annual mortality in the 24 years 1852–75 was 21·5.

The number of mariners in the merchant service, exclusive of masters, whose deaths were referred to *drowning*, are shown in Table 30, together with the mortality by *drowning* in the Royal Navy in each of the years 1866–76.

TABLE 30.—DEATHS by DROWNING in the MERCHANT SERVICE and in the ROYAL NAVY in the Eleven Years 1866–76.

Average in the 10 Years 1866–75 -	199,064	1659	1053	2712	8·3	5·3	13·6	47,585	115	2·4
1876 -	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "*reported*" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

In the 10 years 1866–75, 27,119 lives were reported as lost in the merchant service by drowning; 16,588 by wreck, and 10,531 by accident: the average annual number drowned in those years was 2712 or 13·6 per 1000 strength. The proportional number lost by wreck was 8·3 and by accident 5·3 per 1000.

Wills.

A return in the annual report of Judicial Statistics for the year ending 31st October 1876, by the Senior Registrar of the Court of Probate, shows that the number of probates and administrations granted at the Principal Registry during the year was 17,251. The value of the effects was sworn under 73,258,190*l.*

The returns furnished by the district Probate Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 28,462. The value of the property under which these probates and administrations were sworn was 53,772,178*l.*

The results for the Principal and District Registries combined were—probates and administrations 45,713—value of effects sworn under 127,030,368*l.* The average value of each was 2779*l.* against 2788*l.* in the previous year. The proportion of the cases in which people dying above the age of 21 left wills, or left estates on which letters of administration were taken, was 1 in 6, or 17·5 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

European States.

Through the courtesy of Dr. Becker, Director of the Statistical Department of the German Empire, and of Mons. Keleti, Chief of the Statistical Bureau of Austro-Hungary, I am now enabled to publish returns of the vital statistics of the German Empire and of Hungary.

These returns, together with the usual details relating to the vital statistics in other Foreign States, will be found in a series of tables on pp. cix–cxv.

Table 31.—European States.

Spain*	15·1	—	—	—	37·2	—	—	—	29·7	—	—	—
Italy*	15·4	15·2	16·8	16·2	37·4	34·9	37·7	39·0	30·2	30·3	30·7	28·7

* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the ten years 1863-72.

The population of the German Empire at the Census of 1875 was 42,515,472, and it is now estimated at 43,072,342. In the year 1876 the marriage-rate of the Empire (persons married to 1000 of population) was 17·0, or 2 per 1000 less than the average annual rate in the five years 1872–76. The birth-rate in 1876 was 40·8 per 1000, which was slightly in excess of the average, 40·1; the death-rate was 26·3, the average rate in the five years 1872–76 being 27·6. The rapid decrease in the marriage-rate of the German Empire may be taken as an indication of the severe commercial distress that prevailed after the war and in spite of the war indemnity of 220,000,000*l.* sterling that had been paid by France; but it is remarkable that while the marriage-rate of the German Empire rapidly decreased during the last five years, the birth-rate slightly increased. The decline of the death-rate is encouraging, and leads us to hope that the skill and energy which have achieved the unity, will secure the health, of the nation. There is no reason why the Germans should die at a faster rate than the Swedes, Danes, English, and French. The statistics will show where the evils lie.

TABLE 32.—GERMAN EMPIRE.

YEARS.	PROPORTIONS per 1000 of Population.	
	Persons Married.	Births.
1872 - -	20·6	39·4
1873 - -	20·0	39·7
1874 - -	19·1	40·1
1875 - -	18·2	40·6
1876 - -	17·0	40·8

The population of Hungary, exclusive of Croatia and Sclavonia, at the Census of 1869 was 13,685,852. In the year 1875 it is estimated at 13,525,945. The marriage-rate in that year was 21·9 per 1000 of population against an average in the 10 years 1866–75 of 21·4; the birth-rate was 45·2, against an average of 42·2; and the death-rate was 37·2 per 1000 of population, or 2·5 below the average of the 10 years. In the years 1873 and 1874 cholera was epidemic: in the former year it raised the death-rate as high as 65·1 per 1000.

For Italy nature has done much, but the health of the population is in a very unsatisfactory state; it demands the attention of her scientific men, of her municipalities, and her enlightened government. Why should so many more children perish in Italy than in other countries? Why are so many men and women cut off in the prime of life by fever? Italy has outlived the age of ruins and of insanitary dwellings.

The "*Journal Officiel de la Republique Francaise*" publishes the results of the enumeration of the population of France at the Census of 1876. The Census is taken every five years in France, but owing to the Franco-German War in 1870–71 the Census which should have been taken in 1871 was not taken till 1872, so a period of only *four* years has elapsed between the two last enumerations.

At the Census of 1872 the population of France was - 36,102,921
At the recent enumeration in 1876 it was - - - 36,905,788

showing an increase of - - 802,867

or 2·23 per cent. in the four years, equivalent to 0·551 per cent. annually.

At the Census of 1876 the territorial sub-divisions of France consisted of 362 arrondissements, 2863 cantons, and 36,056 communes; the number of arrondissements remaining the same as in 1872, but the number of cantons being two less.

The greatest increase of population since 1872 occurred in the following seven departments :—

	Increase of Population.
Finistère	23,143
Gironde	30,093
Loire	40,002
Marne	21,623
Meurthe et Moselle	39,472
Nord	71,821
Seine	190,789
Total	416,943

In 20 departments there was a decrease of population, chiefly attributable to a diminution in the number of marriages, to an excess of deaths over births, to modifications introduced in agricultural pursuits, and to the consequent emigration of the inhabitants to the great centres of industry. About two-fifths (329,656) of the total increase of population in France in the four years 1872–76 occurred in 38 towns having a population of 30,000 inhabitants and upwards.

In Paris the population at the Census of 1872 was 1,851,792, at the Census of 1876 it was 1,988,806, showing an increase of 137,014. The annual rate of increase was 1·801 per cent.

The following results show the numbers enumerated under the three heads of civil condition at each of the Censuses of 1872 and 1876 :—

TABLE 33.—CIVIL CONDITION of the POPULATION of FRANCE at the CENSUSES of 1872 and 1876.

CIVIL STATE.	MEN.		WOMEN.		Increase in the Four Years 1872-76.	
	1872.	1876.	1872.	1876.	Men.	Women.
Bachelors or Spinsters	9,630,456	9,805,761	8,844,768	8,944,386	175,305	99,618
Married	7,344,519	7,587,259	7,316,730	7,567,080	242,740	250,350
Widowed	1,007,536	980,619	1,958,912	2,020,683	(Decrease) −26,917	61,771
TOTAL	17,982,511	18,373,639	18,120,410	18,532,149	391,128	411,739

The increase of population in the four years 1872–76 it will be observed has been greater among females than males.

TABLE 34.—NUMBER of MALES and FEMALES ENUMERATED in FRANCE at the CENSUSES of 1872 and 1876.

SEX.	1872.	1876.	Increase.
Males	17,982,511	18,373,639	391,128
Females	18,120,410	18,532,149	411,739

In the subjoined table the vital statistics of ten European States are returned, the States being arranged in the order of their respective average annual birth-rates. The rates are for the five years 1872–76, and are therefore undisturbed by any fluctuations from war.

TABLE 35.—AVERAGE ANNUAL RATES of BIRTHS, MARRIAGES, and DEATHS in TEN EUROPEAN STATES in the Five Years 1872–76.

STATES.	Average Annual Birth-rate.	Average Annual Marriage-rate.	Difference between the Birth and Marriage Rates.	Average Annual Death-rate
Hungary* - - -	42·8	21·9	20·9	46·8
Austria - - -	40·3	17·6	22·7	32·3
The German Empire - -	40·1	19·0	21·1	27·6
Prussia - - - -	40·1	19·1	21·0	27·0
Italy - - - -	37·1	15·8	21·3	30·1
Netherlands - - -	36·2	16·6	19·6	24·2
England and Wales - -	35·9	17·1	18·8	21·7
Denmark - - -	31·2	16·3	14·9	19·6
Sweden - - -	30·7	14·2	16·5	18·7
France - - -	26·3	17·2	9·1	22·5

* For Hungary the rates are for the four years 1872–75.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

Remarks on the Meteorology of 1876.

By James Glaisher, Esq., F.R.S., &c.

The most remarkable occurrences during the year were the unusual frequent falls of snow in the first four months of the year, especially in the month of April; and the long continued periods of low barometer readings in March and December.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer throughout the month of January were (with the exception of two days) above their average values. During the first four days of February the readings were a little in excess of the average, but from the 5th of February to the first of April the readings were all below their averages (with the exception of two days, viz.:—24th February and 20th March). During this period of 57 days the readings of the barometer were at times as much as one inch in defect of the average for two and three days together, and the mean amount in defect for the 57 days was 0·35 inch. From the 2nd to the 8th of April the readings were above their averages, they were below from the 9th to the 14th; and alternately above and below for short intervals from the 15th to the end of the month. From the 1st to the 21st of May the readings were all above their average values, they were below from the 22nd to the 27th, from the 28th of May till the end of June the barometer readings were alternately above and below their averages for a few days together. During the first eight days of July the readings were generally below, and with the exception of four days they were above their average values from the 9th July to the 13th of August, they were alternately above and below from the 14th to the 18th of August. From 19th August to 18th September the readings of the barometer were all below their average values, they were above on the 19th, 20th, 21st, and 22nd, and again below from the 23rd to the end of the month. The barometer readings were above their averages from the 1st to the 8th of October (with the exception of the 4th), they were below from the 9th to the 19th (with the exception of the 15th); from the 21st of October to the 10th of November they were above their average values, and alternately above and below from the 11th of November to the end of the month. Throughout the month of December the barometer readings were below their averages, with the exception of four days which were a little in excess of the average. On many days the readings were more than one inch below their averages. The mean reading for the month of December was 29·31 inches, being 0·49 inch below the average. The highest reading in the year was 30·480 inches on 15th January, and the lowest 28·209 inches on the 4th of December; thus giving a range of 2·271 inches.

Temperature.—From the 17th of December 1875 to the 4th of January 1876 the weather was mild, and the wind mostly from the S.W., on the 5th of January a cold period set in and lasted till the 16th, the mean amount below the average for these 12 days was 6¾°. On the 17th a warm period set in and lasted until the 3rd of February, the weather was then again cold from the 4th to the 13th, but on the 14th of February another warm period began and continued till the 8th of March, and the average daily excess for these 24 days was 6¼°. On the 9th of March the third long cold period began, and lasted till the 27th, and the average deficiency of temperature for the 19 days ending the 27th was 3¾°, from the 28th of March till the 9th of April the weather was warm, and the average daily excess of temperature for this period was 5½°. On the 10th of April a very

severe cold period set in, and snow fell generally over the country north of latitude 51°, on the 11th and 12th it fell more generally, and there were falls of snow in Cornwall and Devonshire. London was visited by a succession of snow-storms, accompanied with vivid lightning and loud thunder; on the 13th the weather was very severe, and it was experienced in all directions, a very great quantity of snow fell, and traffic between London and the North was impeded. On the 14th of April the most severe snowstorm of the whole winter was experienced. The severe cold weather somewhat moderated on the 15th, but it continued till the 19th. On the 20th a warm period set in and lasted till the 29th, the average daily excess for these 10 days being only 2°. From 30th April till 18th June the weather was cold, the wind was mostly from the E. and N.E., and from the 1st to the 20th of May no rain fell; the average deficiency of temperature for the 50 days ending 18th June was 3½°. From the 19th of June till the 22nd of August the weather was warm, and at times very hot, especially in the middle of the months of July and August, when the mean daily temperatures were as large as from 13° to 15° in excess of the average; scarcely any rain fell till after the middle of the month of August, and the mean daily excess of temperature for these 65 days was 3½°. On 23rd August a complete change of weather set in, and rain fell continuously; the weather was cold till 17th September, and the average daily deficiency was 3½°; from 18th September till 20th October the weather was warm with frequent rain, and the average excess of mean daily temperature was 4°; from 21st October till 12th November the weather was mostly cold, and but little rain fell, the average deficiency of temperature for this period was 3¼°, and from 13th November to the end of the year the weather was mostly warm with frequent rain; and the average daily excess for the 38 days was 4¼°. The average daily excess for the last five days of the year was no less than 12¼°.

The mean temperature of the air for the month of December was 44·1°, and in the preceding 105 years there have been only nine instances of so high a mean temperature in December.

Rain-fall.—The fall of rain in January was 1·1 in., being 0·8 inch below the average; in February it was the same as the average, viz., 1·5 inch; in March the fall was 2·3 inches, being 0·7 inch above the average. The fall in April was 1·3 inch, in May was 1·1 inch, and in June was 1·1 inch, being respectively 0·4 inch, 1·0 inch, and 0·9 inch below their averages. From 1st April to 30th June, rain fell on 24 days only, and during the first 21 days in May no rain fell. In July the fall of rain was 0·7 inch, being 1·9 inch below the average; and back to 1815, there are but six instances when the fall in July was as small as 0·7 inch. The fall in August 2·0 inches, being 0·4 inch below the average. The falls of rain were below their averages for five successive months, and the total fall for the five months ending 31st August, was 6·2 inches, being no less than 4·6 inches below the average. In September the fall of rain was 2·6 inches, being only 0·1 inch in excess of the average; in October the fall was 1·6 inch, being 1·2 inch below the average; in November it was 3·1 inches, being 0·8 inch above the average; and in December the fall was 5·8 inches, being as much as 3·8 inches above the average. The total fall from 1st November to 31st December, was 8·9 inches, being 4·6 inches above the average, and in the preceding 61 years there is but one instance of so large a fall in these two months; viz., in 1821, when it was 9·9 inches. There is no instance of so large a fall in December back to 1815. The total fall of rain during the year was 24·2 inches, being 1·2 inch below the average, and the number of days on which rain fell was 167. The total falls of rain in the year ranged from 54·10 inches at Allenheads, 48·15 inches at Lampeter, 47·04 inches at Stonyhurst, and 46·02 inches at Truro, to 21·02 inches at East Tilbury, 24·28 inches at both Ramsgate and Chiswick, and 24·50 inches at Cambridge. The

greatest number of rainy days in the year were 240 at Nottingham, 230 at Allenheads, 223 at both Calcethorpe and Bywell, and 222 at North Shields; and the least were 143 at Chiswick, 153 at Ramsgate, and 157 at East Tilbury.

Thunder storms occurred on 70 days during the year, of these, 14 were in September, 11 in August, 9 in March, 7 in April, 6 both in June and July, 5 in February, 4 both in October and December, 2 both in May and November, and there was none in January. The storms of March, June, and July were mostly in the Northern Counties; those in April were chiefly in the Midland Districts; those in August and September were general; and in October, November, and December were mostly in the South.

Thunder was heard, but lightning was not seen, on 71 days during the year. The greatest number of days in one month was 13 in August, and the least one in both November and December. *Thunder was not heard* at any place in January.

Lightning was seen, but thunder was not heard, on 57 days during the year, none of which were in either January or May.

Solar Halos were seen on 85 days in the year. On 13 in June, 11 in February, 10 in March, 9 both in April and July, 8 in May and September, 6 in August and October, 3 in January, 2 in November, and no days in December, and when seen at one place were generally seen at all parts of the country.

Lunar Halos were seen on 60 nights in the year. On 13 in March, 10 in October, 8 in December, 6 both in February and November, 4 both in April and September, 3 both in January and May, 2 in July, 1 in June, and none in August, and were generally visible over the country at the same time.

Auroræ Borealis were seen on the 19th of February at Calcethorpe, Liverpool, and North Shields. On the 1st of April at Stonyhurst and Leeds, on the 3rd at Leicester, on the 14th at North Shields, and on the 19th at Weybridge; on the 13th of June at Halifax; and on the 5th of December at Weybridge.

Snow fell on 15 days in January, 18 days in February, 19 days in March, and 8 days in April, and the falls were pretty general all over the country. Snow fell on 3 days in May, 7 in November, and 7 in December, or on 77 days during the year. The falls in November were pretty general, but in December they were more confined to the Midland and Northern Counties. The latest day in spring on which snow fell was May 14th at Allenheads, and the first day it fell in the following autumn was November 7th at Royston, Bywell, and North Shields.

Hail fell on 80 days during the year; 47 of which were in February, March, and April. The least number of days in any month was 1 in October, and the greatest 20 in March.

Fog prevailed on no less than 160 different days during the year (exceeding the number recorded in 1875 by 8 days), and they were distributed as follows:—January 20, February 11, March 7, April 18, May 4, June 6, July 7, August 10, September 19, October 16, November 21, and December 21.

Throughout the year fog was very much less frequent in the Southern Counties than either in the Midland or Northern Districts.

PRELIMINARY TABLES.

TABLE 1.—Estimated **Population**, and Number of **Marriages, Births,** and **Deaths** registered in **England** in each of the Thirty-nine Years **1838–76.**

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	338,984	153,590
1840	15,730,813	122,665	245,330	502,303	359,687	142,616

1876	24,244,010	201,874	403,748	887,963	510,315	377,653

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841–51–61–71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 66.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in each of the Thirty-nine Years 1838–76.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—**Marriages** in **England** in each of the Thirty-six Years **1841-76**; those solemnised according to, and not according to, the Rites of the Established Church; Civil Marriages; and detailed information respecting the Marriages in the Churches of the Established Church.

Mean Annual Rate per 1000 in each quarter during the 39 years					13·8	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 7.—**Marriages** in **England.** The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks,** and of Persons who were **Widowers** or **Widows,** in each of the Thirty-six Years **1841–76.**

Mean Annual Rate per 1000 in each Quarter during the 39 years					35·6	35·2	32·8	32·6

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 363 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, *see* note to Table 6.

TABLE 15.—**Proportional** Number of **Births** in **England** in each **Quarter** to **1000 Births** in the **Average Quarter*** of each of the Thirty-nine Years **1838–76.**

1875 -	11,656,400	12,288,059	24·2	21·5	107	113
1876 -	11,801,633	12,442,377	22·5	19·7	108	114
Average proportion in 39 years, 1838-76 -			23·3	21·3	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths of males; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females*; and that out of equal *numbers living* the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 20.—**Deaths** of 57 **Persons** (14 Males and 43 Females) REGISTERED in ENGLAND and WALES during the Year **1876** and RETURNED as **Aged 100 Years and upwards.**

Note.—The Table may thus be read:—Of each 1000 male children living under five years of age, 72·2 died in each of the 39 years 1838–76; in the five years 1841–45 this proportion averaged 69·0 per 1000; and in the five years 1871–75 it was 70·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841–71 (*see* Table 66), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE 24.—ENGLAND.—**Annual Rate of Mortality** per 1000 of **Males** living at Twelve groups of Ages in each of the Thirty-nine Years **1838-76.***

Note.—The Table may thus be read:—Of each 1000 female children living under five years of age, 62·3 died in each of the 39 years 1838-76; in the five years 1841-45 this proportion averaged 58·8 per 1000; and in the five years 1871-75 it was 60·2.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 66), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE 26.—ENGLAND.—**Annual Rate** of **Mortality** per **1000** of **Females** living at Twelve groups of Ages in each of the Thirty-nine Years **1838-76.***

Mean Annual Rate per 1000 in each Quarter during the 39 years					24·9	22·0	20·6	21·8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, *see* note to Table 6.

TABLE 30.—**Proportional Number** of **Deaths** in **England** in each **Quarter** to **1000 Deaths** in the **Average Quarter*** of each of the Thirty-nine Years **1838-76.**

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or † affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies an Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the five years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the Districts or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D signifies Improvement District.

* For method of framing these estimates see note * to Table 38. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Coventry, Dudley, Wigan, and Barrow-in-Furness have been based upon local information as to the increase of inhabited houses in these boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situated outside the Municipal boundaries.

* The figures in this column, excepting those for Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1876 by the addition of 5¼ times the annual rate of increase which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in 1871.

TABLE 39.—LONDON.—**Deaths in Public Institutions** in the 52 or 53 Weeks of each of the Thirteen Years **1864-76.***

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1876 will not agree with those given on page 100, which relate to the correct year instead of the 52 weeks; moreover, the same Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no In-pensioners have been received there.

Average Number living to One Annual Death in 37 years - - -	41	44	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered during each natural year from 1st January to 31st December.

Hampstead and Lewisham did not form part of London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

Total	1,549,010	5,467,075	1,165,628	243,229	8,424,942

Average annual emigration from the United Kingdom { From 1815 to 1876 - - 135,886 ; For the 10 years ending 1876 - 231,855

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815–24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; and 109,469 in 1876.

NOTE.—The number of Deaths in the cols. 3 to 6 are estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in Table 61; the proportions which prevailed in 1861 are used from that year up to 1871, and the proportions which existed at the Census in 1871 for subsequent years; previously to 1861 the proportions used are those existing in 1851.

TABLE 63.—**Births** and **Deaths** among **Passengers, British Subjects,** on board Merchant Vessels at Sea, exclusive of Soldiers, Marines, and invalided Seamen from the Royal Navy, in each of the Twenty-one Years **1856–1876**, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Shipping and Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.

(Furnished to the Registrar General by the Registrar General of Shipping and Seamen.)

In the 25 years 1852-76	4,648,495	99,737	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the *strength* in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 65.—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,151 Seamen** reported to the BOARD OF TRADE in the Year 1876 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of* 1877.)

TABLE 67.

ESTIMATED POPULATION OF THE UNITED KINGDOM,

(including ISLANDS in the BRITISH SEAS)

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 66, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in *1853*; in Sweden in 1853, 1857, and 1866; in Austria in 1866 and 1873; in Hungary in 1866, 1873, and 1874; in *Prussia* in 1866; in Belgium in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in *1871*; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and *1864*; in *Austria* in 1850; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860. Previous to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

TABLE **72.**—SWEDEN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1850** to **1876.**

(Supplied by Dr. Berg, Chief of the Statistical Department of Sweden.)

1876	4,429,713	31,184	62,368	135,890	86,334	14·1	30·7	19·5

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.
† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths (the highest number in any year since 1801), scarlet fever 2418 deaths, and typhus and typhoid fever 2149 deaths.

TABLE **73.**—AUSTRIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1876.**

(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 the States of Italy were included; since 1864, however, they are excluded. The facts for Hungary and Transylvania for years subsequent to 1865 appear in Table 74.
* Census years.
† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war.
‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE **74.**—HUNGARY AND TRANSYLVANIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1866** to **1876.**

1876	36,816,581	291,366	582,732	964,682	834,074	15·8	26·3	22·7

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years. † Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

TABLE **80.**—SPAIN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1861** to **1870.**

1869	16,883,986	137,120	274,240	602,287	550,660	16·2	35·7	32·6
1870*	16,935,613	105,543	211,086	599,786	509,639	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome) where the census was not taken until 1872, is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, not being legally recognized, escaped registration; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 82.—**Changes** in the **Constitution** of the **Superintendent Registrars' Districts** and **Registration Sub-districts** during the Year **1876.**

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District.]

Superintendent Registrar's DISTRICT and Registrar's *Sub-district* in which a change was effected, or from which a Transference was made.	Date of Change.	Place and Population (1871) transferred from the District in Column 1 to the District in Column 4. * The *Registration or Union Counties* consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1876.

‡ Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 90 cases of marriage after divorce, see Table 11, page lviii.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1876—*continued.*

* The *Superintendent Registrars' Districts* (632 in number at the end of the year 1876) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1876—DISTRICTS—*continued*.

* The Sub-districts (2190 in number at the end of the year 1876) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1876 are given on pages 99–119.

‡ For the change made in the sub-district of Berwick Street (4 : 2) see Table 82, page cxvi.

* For the changes made in the sub-districts of St. Martin (387 : 3.) and Warwick (396 : 1.), see Table 82, page cxvi.

† 387 : 4.—St. Paul sub-district was united with St. Philip sub-district from 1st October 1876, but as the St. Philip sub-district (thus enlarged) was abolished from 1st July 1877, St. Paul (as originally constituted) being added to All Saints, and St. Philip (as originally constituted) to St. Thomas, the numbers of births and deaths within St. Paul and St. Philip have been separately entered for the entire year.

DEATHS IN PUBLIC INSTITUTIONS, 1876.

THE following pages contain the numbers of deaths registered during 1876 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1410 Institutions; of which 716 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 611 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1410 Institutions 46,235 deaths were registered during the year, or 9·1 per cent. of the total deaths in England and Wales, against 8·7 and 8·8 per cent. in the two preceding years; 29,268 occurred in Workhouses, 12,354 in Hospitals, and 4613 in Lunatic Asylums. Each of these totals was below the corresponding number in 1875, and the proportion to total deaths was 5·8 in Workhouses, 2·4 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the **Public Institutions** of **England** in the **Year 1876.**

NOTE.—The Table may be read thus: Of the 265,076 deaths of Males, 72,552 were those of children under 1 year of age; 20,076 those of the age 1 and under 2 years; 9,296 of the age 5 and under 10 years; 6,200 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 14 males registered as aged 100 years and upwards; namely, 4 aged 100, 2 aged 101, 5 aged 102, 2 aged 103, and 1 aged 106 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 20, page lxvii. of Report.

The *Causes of Death* in England and in London, in combination with the Ages at Death, are given at pp. 146–161.

1876.

CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND AND LONDON.

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES, AND DISTRICTS.

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated "Heart Disease," in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is that disease of the organs without any further distinction.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND in 1876, by WILLIAM FARR, Esq., M.D., F.R.S. 225

TABLES (MISCELLANEOUS) 258

TABLE of CAUSES OF DEATH in ENGLAND in 1876, classified in accordance with the NOMENCLATURE drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS OF LONDON . . . 288

APPENDIX.

Letter to the Registrar General on the Causes of Death in England and Wales, by W. Farr, Esq., M.D., F.R.S.

Year 1876.

Sir,

Your Report shows that the deaths of 510,315 men, women, and children were registered in the year. It is not thought enough in England to record the fact, the date, and the place of every death. "Why did this "man, this woman, this child die?" is the question addressed in the first place to the informant, in the second place to the registered medical attendant, in the third place to the coroner. The medical attendant generally certifies the cause of death in conformity with instructions; and his name is entered in a column of the register. Of the importance of this special inquiry there can be no doubt. The slightest consideration shows that many causes can be controlled.

In the earlier ages when little was known of medical science, and when the passions of men were violent, attention was drawn to homicides; against murder the laws were chiefly directed, and the execution of murderers was the recognised remedy. The black death, sweating sicknesses, plagues, much more fatal than homicides, were looked upon as direct divine inflictions; and not as the results of violations of the laws of nature. These laws are now understood; and true causes are sought.

The advance of science leads us through several links of chains of causes; some of which are evident, while others can only be traced by the collation of innumerable observations under various conditions of time and place. The death of a man from a stab in the chest prompts us to inquire whether the stab was in the heart or in the lungs: and if in the lungs whether it was followed by emphysema, pleuritis, or pneumonia terminating fatally in a given number of days: then further what motive led to the stab; whether it was inflicted by an assassin deliberately, by a foe in the field, by an adversary in a duel, by a stranger in the heat of passion, or by a careless friend; or finally whether it was self-inflicted, and under a peculiar state of mind. Pneumonia is not only caused by wounds; it is induced by cold of different degrees of intensity; and the degree in which this cause operates at different ages in the two sexes is only determinable by the analysis of the extensive observations registered in comparison with exact daily and nightly meteorological returns extending over series of years. Pneumonia has in past times been recorded as an epidemic; but it was probably then confounded with influenza. In deaths by the zymotic diseases there is (*a*) the disease itself—say small-pox and the secondary diseases to which it may give rise, such as pneumonia; and (*b*) the infectious source from which the disease sprang. In prevention this plays an influential part; and the efficiency of this branch of medicine depends upon a thorough knowledge of Etiology which has not hitherto been sufficiently studied in the schools for the want of data such as the registers in part supply.

It will be observed that the statistical nosology is as it should be etiological. It divides deaths into five classes, which may be arranged circularly into those caused (1) by *zymotic diseases*—and referable, as small-pox is to extraneous organisms, and usually to men; (2) by *constitutional diseases* generally yielding new products as cancer springing up in the body of the suffering person; (3) by *local diseases* of particular organs; (4) by *developmental diseases* which result from the birth, growth, or decay of the individual; or (5) evidently by physical, chemical, electrical agents—such as act in suffocation, blows, wounds, drowning, fire, lightning, and venomous or other bites. Thus the circle begins with remoter organic causes outside the organism; then it includes causes (2, 3, 4) originating within the body; and finally it returns (5) to physical causes evidently acting from without.

The specific causes of every death being registered—as far as known—under some 270 names as in the Table on pp. 148–155, it is evident that they admit of a number of possible arrangements which could be only calculated by the continuous multiplication of the numbers 1, 2, 3 . . . . up to the last. Then they may be thrown into any number of groups. Now practically, several such groups have been formed and that with reference to the main objects in view. Thus, in medical practice, diseases have been divided into surgical cases, medical cases, and cases of midwifery. There is a debatable land; but the line is well drawn between the two main groups in the classical works of Sir Thomas Watson and Mr. Erichsen. Surgery (chirurgery, handicraft) takes all the cases of mechanical violence and cases where mechanical aid can be in any way rendered by operations or otherwise; thus it claims all the Class V. of our classification. It takes syphilis, cancer, scrofula, ovarian dropsy, joint diseases, ulcer, abscess, stone, and certain other affections which will be readily distinguished. The rest, including the majority of fatal diseases, it leaves to medicine.

Another classification which found some favor at the Paris Congress—leaving hygienic considerations aside as they were not then sufficiently thought of—divided diseases into *acute* diseases and *chronic* diseases; a practical distinction of considerable weight in jurisprudence.

A pathological classification places together in great groups all diseases of the same nature such as inflammations, tuberculoses, cancers, atrophies, hypertrophies, and so on, treating the parts affected as of subordinate value. This I tried in the Second Report, in which the causes of death for the year 1838 are shown according to this classification.*

The First Report exhibits a first attempt at Nosological classification in two groups; the first of epidemic, endemic, and contagious diseases, which is recognised by Hippocrates and by historians, and is retained in the zymotic class; the second of sporadic diseases including those of uncertain or variable seat (*morbi de incerta sede*) now called constitutional diseases; and local diseases: the final group included deaths from external causes. This classification with slight modifications was used down to the 20th Report; and it is still retained in Scotland. Since the 21st Report the present classification has been used.

The arrangement followed in the nomenclature of the College of Physicians is displayed in the Table 26, pp. 288–292.

In the following commentary I find it most convenient to treat the causes of death grouped as hitherto etiologically in five classes. The progress of medicine has now established the zymotic class.

I.—Zymotic Diseases.

96,660 persons died of diseases of this class; the greater number, 89,647 of the miasmatic order. Scarlet fever has been the prevailing disease

* Registrar General's 2nd Report, pp. 156–7.

since the year 1870, when it was extraordinarily fatal. Measles and whooping-cough were fatal each to about ten thousand children. There has been a decided decline of fever, which was, however, fatal to 10,746 lives, of which three-fourths were returned as dying from enteric or typhoid. The decline has been progressive since 1865–9, when the rate of death from the three forms, namely, typhus, enteric, and simple, was 934 (in 1,000,000 living); in the next quinquenniad it was 657; in 1875 it was 548; and finally in 1876 it was 445. By stricter attention to the water supply, the milk supply, washing, and other ways through which the specific germs (*Enterads*) of enteric fever are conveyed the ravages of this disease may be mitigated if not suppressed.

Of the enthetic diseases *syphilis* is the most fatal, and 2141 deaths were referred to it directly, while 280 deaths of men were referred to stricture of urethra, the consequence generally of gonorrhœa. The increase in the numbers of such deaths may be only apparent; and may imply no more than increased knowledge, or more accurate certificates. Upon referring to pages 148–9, it will be seen that 1718 of the dying from syphilis were children under 5 years of age; the sins of the fathers and mothers here had indeed been visited upon the children, and cut off their lives. Only 9 died of the age of 5 and under 15. The adults were 407 of the age of 15 and upwards; of whom 209 were men, 198 were women. The greatest number of men and women died at the ages 25–45.

53 persons, namely, 45 males, 8 females died of *hydrophobia;* women living much in-doors being least exposed to the bites of rabid dogs. In the years 1856–63 the deaths from hydrophobia were 26, or 3 annually. In the year 1862 only one death was ascribed to this cause. Not so now. In the last seven years 316 persons died of this dire disease; or 45 annually. It is probable that more dogs have been kept. But neither this nor the neglect of police regulation accounts for this extraordinary increase. The disease (*lyssa* in Greek) is caused by zymotic animal poison (*lyssine*) which varies in strength under conditions that require investigation.

There is a distinction between the zymotic germs, which for shortness may be called zymes, and poisons such as that of the *cobra capella*, which some researches lately presented to the Royal Society tend to show can be crystallized. My friend Dr. Richardson, apparently confounds the two matters; and considers the saliva of the dog that produces hydrophobia, of the same nature as the venom of the serpent. But there is a marked difference; the venom of the serpent is no more reproduced in any dog it slays than prussic acid; the *lyssine* is reproduced in successive generations in dog after dog. In human beings the zymes of small-pox, measles, scarlatina, enteric fever, and typhus reproduce themselves in successive generations, with various degrees of energy in an infected population. There is nothing like this in simple poisons, even of animal origin, which comport themselves like morphia, oxalic acid, and hydrocyanic acid. These bodies have the characteristic properties of living bodies of the simplest form, be they called cells, corpuscles, granules, molecules, or germs. They are of different natures; thrive in different conditions, produce different effects, go through their evolutions in different periods of time*. They have this in common with parasites; they are only observed in alien organizations, and all we at present know of them is their effect on those organizations. But the effects are as well marked and as specific as the effects of chemical reagents, and are as easily identified. They are zymotic germs, or *zymes*. The Latin name *contagium vivum* sometimes used, has to me an air of clumsiness; and is not drawn from the nature of the bodies themselves.

* Splenic apoplexy, and some contagious diseases of cattle and pigs have been referred to *bacteria*, of which microscopists are attempting to distinguish species by definite characters.

In syphilis the syphilitic zyme (*syphilad*) evidently undergoes certain transformations similar to the metamorphoses of the lower organisms. The same may be the case with other zymotics.

The slaughter of rabid dogs that spread hydrophobia, of glandered horses, and of cattle killed to exterminate disease no doubt is effectual to a certain extent. In dealing with the infectious diseases of human beings there are other courses open; you strive (1) to prevent their generation, (2) to isolate the sources of infection, (3) to take the utmost care that the zymotic matters shall be destroyed, (4) to arrange that these matters shall not be spread by water, air, or clothing. In the case of syphilis under the Contagious Diseases Act precautions are taken in the ports and in garrison towns, the effects of which on the mortality by the disease will be watched with interest. The registered deaths from syphilis in all England were 595 in 1849, and 2141 in 1876. The annual deaths to a million living were 37 in 1850–4; 81 in 1870–4; 90 and 89 in 1875 and 1876. In thirteen districts containing eleven protected stations the annual mortality by syphilis declined from 141 in 1861–5 to 108 in 1870–4. In the rest of England and Wales the death-rate by syphilis increased from 66 to 80.

Among dietetic diseases generally there has been a slight increase chiefly referable to the want of breast milk. The deaths from purpura and scurvy are not numerous but they are two and a third times as many as they were in 1849. The deaths ascribed to privation were 73 in 1850 and 97 in 1876; in proportion to the population they have varied little.

Alcoholism.—Delirium Tremens and Intemperance.

The deaths ascribed to *alcoholism* or to alcoholic drinks deserve close attention; they are of two kinds, (*a*) deaths by delirium tremens, and, (*b*) deaths ascribed directly under various names* to intemperance. The number of such deaths was 817 in 1849 and 1120 in 1876. The proportion of deaths from alcoholism to population (*a million*) in the five quinquenniads 1850 to 1874 was 46, 41, 40, 40, 34 *annually;* there was a decided and gradual decline from first to last. The decline was most striking in *delirium tremens* about the nature and cause of which there can be no mistake; unfortunately in the last two years the old level was attained, not as regards delirium but as regards alcoholism of other kinds. In the three years (1871–73) of high wages in the manufacturing districts the proportion of deaths by alcoholism was low. The deaths by drink rose on the other hand in the three years (1874–6) of depression probably because some sought consolation in drink, because the hours formerly spent in the workshop were spent in the public-house, or because the previous habits then began to bear fatal fruit. The fact remains, independent of any theory, that in three years of hard work and high wages —three years of prosperity—2230 people died of drink; while in the three years of idleness and reduced wages—three years of adversity—3316 died of the same causes—delirium tremens and other results of intemperance. This is contrary to a current opinion; and it may be worth while to point out that in the three years of prosperity the annual consumption of spirits in the United Kingdom was less than in the three years of adversity. It was 36 million gallons a year in prosperity, 42 million gallons a year in adversity. The working classes did not throw away their earnings to the extent some have asserted. The Savings Banks had a capital of £53 million at the beginning of 1871; to which 8,610,231*l.* were added in the three years of prosperity, 8,612,236*l.* in the years of adversity, making 70,280,120*l.* held at least to a considerable extent by the working classes.

---

* Alcoholism, intoxication, dipsomania, drunkenness, ebriositas, inebriety are the words occurring in the registers.

The ages at which deaths from alcoholism are registered are shown below.* They precede the ages at which deaths from insanity are most frequently recorded.

The greatest number of deaths from alcoholism was registered at 35–45, an age when the brain is most active; the greatest number of deaths from insanity at 65–75.

The number of deaths in six years ascribed directly to alcoholism was 5546, rather more in number than the 5450 deaths referred directly to insanity. The ages are shown in the Table below.† As insanity induces paralysis so alcoholism induces diseases to which a certain number of cases of alcoholism are ascribed in the certificates. Cases of delirium tremens are not necessarily fatal, as under judicious treatment many patients recover; and about their diagnosis there is little chance of mistake: for they can only be confounded with rare inflammations of the brain. This distressing disease is thus described in the lectures of Sir Thomas Watson. The picture is true to the life; and should be carefully contemplated.

"Let me remind you in a few words of the peculiar characters of deli-
"rium [tremens]. If you question the patient about his disease, he
"answers quite to the purpose; describes, in an agitated manner, his
"feelings, puts out his tongue, and does whatever you bid him; but
"immediately afterwards he is wandering from the scene around him to
"some other that exists only in his imagination. Generally his thoughts
"appear to be distressful and anxious; he is giving orders that relate to
"his business to persons who are absent; or he is devising plans to escape
"from some imaginary enemy. He is haunted by ocular spectra; fancies
"that rats, mice, or other reptiles, are running over his bed: sees spiders
"crawling on the ceiling, or a horse's head thrust through the wall of his
"room. He addresses remarks to strangers whom he erroneously believes
"to be present. He looks suspiciously behind the curtain, or under his
"pillow, and he is perpetually wanting to get out of bed; but he is readily
"induced to lie down again. It is very seldom that he meditates harm,

" either to himself or to others; there is rather a mixture of cowardice " and dread with the delirium."*

The few cases of *delirium tremens* induced by shock from injuries, would be referred to those injuries, so that all the deaths under this head in the registers may be accepted as deaths by excessive drinking in some of its various forms.

The effects of great and excessive doses of alcohol are well known; and so are the effects of the excesses of habitual drunkards.

Ramazzini described very clearly the effects of alcohol breathed in small continuous doses in the distilleries of Modena; not in cellars but in open porticoes, where the alcoholic vapor was necessarily diluted. The men who work in this vapor for several months, and generally pass the winter in the distilleries grow, he says, "lethargic, shrivelled, emaciated, melancholic, vertiginous with loss of appetite."† The next step leads us to the effects of drinking between meals through the day, which is also injurious, as is shown in the high rates of mortality among publicans and wine merchants. The effect of total abstinence has not yet been studied on a large scale, except so far as to show that no evident evil ensues, and that many under the regimen are perfectly healthy. I will show here in contrast the rates of mortality among two classes who differ considerably in habits, but have as a rule, ample supplies of the necessaries of life; namely, the clergy and the publicans and others dealing in alcoholic drinks. Now the publicans, and certainly the wine merchants, are not as a *body* "habitual drunkards;" nor drunkards in any sense. There are drunkards among them, but they are exceptional, marked men; what as a class they suffer from must be "*taking a glass*" *at intervals between meals with customers or in late hours alone. How fatal this tippling* is the Table shows.

ANNUAL RATES of MORTALITY per 1000 at Four Ages among CLERGYMEN and PROTESTANT MINISTERS, and among PUBLICANS and WINE MERCHANTS.

AGES.	Clergymen.	Protestant Ministers.	Publicans, Beer-sellers, Wine and Spirit Merchants.
25—35	4·65	5·83	14·49
35—45	6·28	7·30	20·44
45—55	13·24	9·33	28·59
55—65	22·70	24·60	43·03

NOTE.—The facts on which these calculations are based are taken from the Supplement to the Registrar General's 35th Annual Report, pp. clxxii, clxxv.

A few devoted clergymen abstain from alcoholic drinks for various reasons, but they have not as a body "*taken the pledge;*" some of the new as well as the old school, especially in cathedral towns, are said to have appreciated sound port wine, which retains its old pretentions to orthodoxy; but the temperance of the clergy of the day is beyond question, and neither they nor the well-bred classes of society usually drink spirits or wine without solid food. At the ages in the prime of life, Protestant ministers are nearly as healthy as the clergy of the Anglican church.

I may cite many other classes who drink in moderation, such as carpenters, or again, agricultural laborers who drink beer, but whose means are limited, and who in the country are less exposed to temptation. Their

* *See* Lectures by Dr. Thomas Watson on the Principles and Practice of Physic, Vol. I., p. 407.

† Ramazzini De morbis Artificum Ed. 1717, Genevae, cap. xx.

mortality does not at all approach that of the publicans and spirit dealers. All scientific observation goes in favor of temperance in drinks. As habitual drink alcohol is the most dangerous; wine and ale the most medicinal.

A Committee of the House of Lords has sat, the Duke of Westminster in the chair, to inquire "into the prevalence of Habits of Intemperance, and "into the manner in which those habits have been affected by recent "legislation, and other causes." The report is valuable in its scientific evidence as giving the results of the most recent research. The opinion that alcohol is always eliminated by the organs unaltered is refuted. Experiments upon animals and man, as for example, "the experiments of Professor Binz, of Bonn," clearly prove, says Dr. Burdon Saunderson, "that "there is no disengagement of alcohol by the breath, unless the quantity taken "is above a certain ill-ascertained limit; that limit is about *two ounces* "[of absolute alcohol]. That is to say, that an ordinary man may take as "much as *two ounces* of alcohol, and the whole of the alcohol will be "oxidised."* Qu. 9384. It is to that extent food; the oxidation produces some of the forms of force. Dr. Brunton asserts that alcohol in small doses increases the gastric secretion, and thereby aids digestion; it is then absorbed into the blood; it increases the action of the heart, and dilates the fine vessels, so that the warm blood from the interior of the body pours over the surface and gives a feeling of pleasant warmth and comfort. In the end as more blood is at the surface when the external air is extremely cold the person may be chilled down and die in consequence of the cooling. Such is Dr. Brunton's view.† That can only result from excess. It is evident that chemistry and physiological reasoning throw much light on the action of alcohol. But experience, which may be held to be a series of experiments, can alone determine the precise effects of food and drink of different kinds on the forces and health of men. Wine and ale contain different kinds of alcohol, æthers, and other organic compounds; but the predominating spirit is æthylic or common alcohol ($C_2 H_6 O$). "Pure "alcohol gives no taint to the breath, and good alcoholic liquids only "leave that smell which belongs to their ethers."‡ Some of the alcohols are extremely noxious. The wines are subject to changes, which Pasteur calls diseases of wine, and traces to different kinds of ferments.§ This explains some of the sad effects of bad spirits and wines on the people who drink them. Dr. Parkes shows in his experiments that good claret up to a pint had no sensible effect on the temperature of the interior of the body, but it raised the pulsations of the heart from 76·3 to 80·5. The psychical effect of the claret is not recorded; but 4 to 8 ounces of alcohol in the 24 hours produced torpor and sleepiness.‖

It is impossible to discuss the whole of the effects of alcoholic drinks—spirits, wines, and ales of such various qualities—on life and on disease. The facts I have in the reports are a contribution to the further investigation of this very important subject; connected as it is with health, crime, insanity, and the subsistence of families. It is not a mere Public House question; but even in that aspect it is not unimportant as a political inquiry. I will only state here briefly the practical results of the investigations up to this time bearing on the causes of death.

---

* Reckoning 1 part of sherry as 0·20 of alcohol, there are about 2·4 oz. of alcohol in half a bottle of sherry. It is the limit. Two to three glasses of sherry, three to four of claret, are average doses. For the bottles of past times put glasses, and you will be probably right; but the true standard is learnt by watchful experience.

† *See* Evidence before Lords' Committee. Qu. 9246–9378. It is borne out by the experiments of Binz in the paper cited below.

‡ Effects of alcohol on warm-blooded animals. By C. Binz, M.D., Journal of Anatomy and Physiology, vol. VIII., pp. 233–41. He shows by experiment, as Todd had, that in fever alcohol reduces the temperature.

Food (1) nourishes the body, replacing waste denoted by urea, and keeps the blood and all the tissues in a suitable fluid, physical condition; (2) it generates heat, which is in proportion to the amount of oxygen consumed—carbonic acid and vapor exhaled; (3) it sets free muscular force; and (4) finally it acts on the mind or generates psychical force. Water, milk, wheat, oats, rice, fruits, meats of various kinds suffice for the first three purposes; but under the fourth head these elements are supplemented by coffee, cocoa, tea, tobacco, spices, wines, and spirits. They directly affect the brain and nerves. Grape, hop, and barleycorn thus find a place. Their effects are not learnt from chemistry but from the senses, of which the poets of all ages and philosophers are natural expositors. In the arts—in music, science, eloquence, poetry,—soul sets soul in motion through etherial mediums; but material stimulants also play their part in the emotions of the loftiest as well as the lowest orders of mind. The Symposium of Plato gives us accurate ideas of the habits of the finest minds of Greece in the age most renowned for arts and eloquence; and the philosopher puts dramatically in the dialogue wise words in the mouth of the physician Eryximachus.

Agathon the poet celebrated a banquet, and offered up his sacrifice of victories won "in the presence of more than thirty thousand Hellenes."

"Then said Eryximachus, the weak heads like myself, Aristodemus, "Phaedrus, and others who never can drink, are fortunate in finding that "the stronger ones are not in a drinking mood. (I do not include "Socrates, who is able either to drink or to abstain, and will not mind, "whichever we do). Well, as none of the company seem to drink much, "I may be forgiven for saying, *as a physician, that drinking deep is a "bad practice, which I never follow, if I can help,* and certainly do not "recommend to another, least of all to any one who still feels the effects "of yesterday's carouse."

The speeches of unsurpassed eloquence then commence and go on, till Alcibiades enters drunk, and insists that the rest shall drink too. The wine cooler holding two quarts* which had caught his eye was filled and emptied; and then refilled for Socrates, who drank it off. "My device," said he, "will have no effect on Socrates; for he can drink any quantity of wine "and not be at all nearer being drunk."† The Symposium was then an established institution.‡ Lycurgus is said to have rooted up the vine; and Sparta had no drama, no art, no science. In Italy Horace and Cato alike were inspired by the Amphora.§

The great Elizabethan school of dramatists, which culminated in Marlow, Shakespeare, and Ben Jonson, was equally famous for its genial cups. "What things have we seen done at the Mermaid," writes Beaumont to one of the wits of his day. And the English statesmen, famous for eloquence in Parliament, drank wine freely in the last and the present century. Burns, Byron, and some modern poets took at times wine or spirits perhaps too freely. The Noctes Ambrosianæ of Christopher North, written in the hey-day of modern Athens, could scarcely have been conceived under the inspiration of water. They are not the dialogues of a Plato but works of genius. The Germans in the age of Tacitus, and the Northmen in their most glorious days excelled the Greeks, not indeed in art, but in drinking, and they had in them the energy that conquered Rome and the fairest countries in Europe, where their race rules to this day. Gœthe worked for six hours a morning. Adhering to the habits of his German ancestors; "he sat a long while over his wine chatting gaily to some friend or other

Sæpe mero caluisse virtus.

" (for he never dined alone). . . . He was fond of wine and drank daily his " two or three bottles [of Rhine wine]. The amount he drank never did " more than exhilarate him."* Unlike Schiller he never drank wine to stimulate his genius. In this he was a German Socrates. The Turk is a negative instance, his valour is unquestionable ; he smokes, but drinks no wine; he has never been famous in art, science, or industry.

Professor Binz, in his paper on some effects of alcohol, refutes the "prejudice" about alcohol which he says "Shakespeare represents very merrily." The German Professor falls into the common error of identifying Shakespeare with his characters; the words are put into the mouth of Falstaff. But before quoting the passage let us hear Dr. Richardson on the other side, who has studied the effects of alcohol as a physician, and thus delivers himself.† "To have to speak of diseases," he says, "originating from the use of a fluid which, next to water, forms " a part of the daily beverage of immense populations of civilized people, " seems a satire on civilization. . . In whatever direction the physician " turns his attention to determine the value of alcohol to man, beyond the " sphere of its value as a drug which he may at times prescribe, he sees " nothing but a void ; in whatever way he turns his attention to determine " the persistent effects of alcohol he sees nothing but disease and death; " mental disease, mental death ; physical disease, physical death. . . . . " The effects produced by alcohol are common, as far as I can discover, " to every animal. Alcohol is a universal intoxicant, and in the higher " orders of animals is capable of inducing the most systematic phenomena " of disease. But it is reserved for man himself to exhibit these phe- " nomena in their purest form, and to present through them, in the morbid " conditions belonging to his age, a distinct pathology. Bad as this is, it " might be worse; for if the evils of alcohol were made to extend equally " to animals lower than man, we should soon have none that were tame- " able, none that were workable, and none that were eatable. . . . . " The true place of alcohol is clear ; it is an agreeable temporary shroud. " The savage, with the mansions of his soul unfurnished, buries his restless " energy under its shadow."

So far Dr. Richardson who hates alcohol as he thinks with good reason. Now turn to Falstaff a philalcoholist, if there ever was one. The Duke of Lancaster, sober-blooded, is evidently a total abstainer, he doth not love Falstaff: "A man cannot make him laugh, but that's no marvel ; " he drinks no wine. . . . . None of these demure boys come to any " proof . . . . . they fall into a kind of male green-sickness [become " anæmic]. . . . . A good sherris-sack hath a twofold operation in it. " It ascends me into the brain ; dries me there all the foolish and dull and " crudy vapours which environ it; makes it apprehensive, quick, forgetive " [inventive], full of nimble, fiery, and delectable shapes ; which delivered " o'er to the voice . . . . becomes excellent wit. The second property " of your excellent sherris is the warming of the blood." Here Binz says, Falstaff is wrong; but although alcohol in the end cools the blood by some degrees in the drunkard, it at first warms the surface, "it illu- " mineth the face, ... and then the vital commoners and inland petty " spirits muster me all to their captain, the heart, who, great and puffed " up with this retinue, doth any deed of courage; and this valour comes " of sherris. . . . . Hereof comes it that Prince Harry is valiant. . . . . " If I had a thousand sons, the first humane principle I would teach them " should be, to forswear thin potations."‡ The two Orators have a great deal more to say for their extreme opinions ; the philalcoholist sees good, the misalcoholist sees all evil, in wine.

‡ *See* Henry IV. Part 2, Act IV., Scene 3.

Shakespeare knew all about the effects of wine, which are described by his various characters high and low. It is a mark of his dramatic genius that each person speaks in character: Hamlet denounces the "rouse" of the traitorous king; "it is better honoured in the breach than the observance:" Cassio who had "unhappy brains for drinking" and had just been cashiered sees all its evils; "O that men should put an "enemy in their mouths to steal away their brains! that we should with "joy, pleasance, revels, and applause transform ourselves into beasts. "..... Every inordinate cup is unblest, and the ingredient is a devil." Dr. Richardson can say nothing stronger. Then the final words are dropped, "Come, come, good wine is a good familiar, if it be well used."

It is a remarkable fact, but quite natural, that physicians and clergymen who have seen so much of the evils of drink, and men who have suffered from them, should speak in the strain of Cassio. They speak with weight. And as there are men of weak heads, incapable of self-control, the Church of England Temperance Society offers them judiciously the pledge of total abstinence. This pledge taken during the youth of both sexes, cannot but be beneficial; *fruit*, bread, meat, potatoes, milk, sugar, water suit them then better than fermented liquors.

Drunkenness, unlike gluttony, is a public scandal; and we find in 1876 that in the Metropolitan Police District 32,328 charges of drunkenness with or without disorder were made. Upon the one hand it is contended that the same person is charged two or three times a year, so that the number of *persons* drunk and disorderly annually may be reduced to more than half the above number; and upon the other hand it is known that many persons drunk and disorderly are never charged at all. Taking it that 32,328 *persons* were disorderly drunk in the year, then 4,179,279 were sober, and not in a state to disturb the public peace.* In the month of June 1877 the number apprehended as drunk and disorderly daily was 97,† of whom 80 were convicted. Thus such drunkards in a given day were to the rest of the people of the Metropolis as about *one* to 43,419. In studying the question on both sides, it is plain that an immense majority of the people are sober. Assuming that the 32,328 represent different persons drunk, or drunk and disorderly, one day in the year, then it follows that no charge was made against them for this crime on the remaining 364 days, when the rest of the population—more than four millions in number—gave the police no trouble.

The deaths by alcoholism in the Metropolitan District were returned at 164 in the same year, when the deaths from zymotic diseases were about 18,000, and the deaths from all diseases were 89,741.

By going into prisons, police courts, and lunatic asylums, we learn much of the condition of a fraction of the population; for they are instructive schools of morbid anatomy; but a census of the whole population teaches us a different lesson, and the mind through a clear and not a disturbing medium, sees the people in their true light. I have at a society of Odd Fellows and elsewhere seen a good deal of the really working classes, as they are called, and feel convinced that it would be most unjust to charge them as a body with occasional, to say nothing of frequent or habitual, drunkenness. The Odd Fellows expel drunkards; and from an annual return with which I have been favoured by the intelligent secretary, I find that in the six years 1871–1876, when the number of members rose from 442,575 to 508,013 in the United Kingdom, 222 were expelled for various causes, including only 4 for drunkenness—less than *one* annually. The Foresters with 509,519 members have not furnished me with returns, but from all I can learn, they are also as a body equally temperate.

---

* *See* Report of Lords' Committee on Intemperance, vol. I., p. 342; vol. III., p. 313.

† The greatest number was apprehended on Saturdays, 141, the smallest number on Fridays, 70. *See* Third Report of Lords' Committee on Intemperance, p. 315.

Canon Ellison, Canon Duckworth, and other devoted members of the Church have themselves taken the abstinence pledge: believing in the doctrines, and bent on calling sinners to repentance, they have reclaimed considerable numbers of drunkards.

The Church Society was established in 1861 as a purely total abstinence society; but in 1873 it was, under the auspices of the archbishops, placed on a broader basis more in accordance with the moderate principles of the English Church. Its object is to promote temperance in every way, without insisting on the pledge of abstinence. This, I venture to say, opens a wider, a more rational, and a more practical field of usefulness.

A large number of people now abstain altogether from alcoholic drinks, especially in towns; and those who uphold this course—some of them eminent in science—will, through the agency of the Temperance Society, be able to collect extensive observations, and to prove that men can live and enjoy health in towns without any fermented liquors. They will also be able to show, as I have, that any excesses injure health.* What is wanted is a scientific inquiry into the mortality of a large body of total abstainers. Why does not the United Kingdom and General Provident Institution publish the results of such an inquiry which its actuary, Mr. Hardy, is so competent to conduct? Its experience is extensive; and might be compared with the experience of other offices of the same standing.

I will now state my reasons for believing that the present mixed dietary of wines and ales, in due proportion with vegetable and animal food, while it yields the maximum energy of life, is conducive to its duration.

I will first notice a fallacy in some reasonings on the subject. Alcohol in excessive doses produces death and its effects are traced through the various organs of the body. On such a basis this is the reasoning. Alcohol in given repeated doses is fatal; therefore in every dose it poisons men quickly or slowly according to circumstances. It is always a poison. Test this argument on the active remedies of the pharmacopœia. Take arsenic; in doses of ten grains it kills a man in excruciating agony in a few hours. In small doses has it any injurious effect? None whatever. On the contrary, it restores or preserves health. Fowler's arsenical solution cures ague. Sulphuric acid is according to the dose a corrosive poison, or a remedy for the diarrhœa premonitory of cholera. Opium puts out life or simply soothes and sends sufferers to sleep. Chloroform kills *one* patient in a thousand, but it quells pain in tens of thousands and is otherwise harmless, so it is still administered in surgical operations. Excess in meats of any kind induces indigestion; and over-feeding is probably as fatal as over-drinking; yet no one advocates entire abstinence from food; and only vegetarians abstain from animal food: ascetics justly call fasting *mortification*. Love, as well as wine, is sung by the poets; but it has its fatal abuses; yet no one on the strength of these abuses has counselled total abstinence from marriage. It is quite possible, then, in accordance with these analogies that wine in excess might be a poison, and *in limited doses* a virtuous delight to divines, doctors, prophets, and princes. Instead of shortening it might lengthen life. The ancients who created symbols of mental states in their mythology represented Dionysus as the graceful, beautiful youth of Greek art, wandering about with Ariadne (why not with Ceres?) at one time, and at another time figuring as the riotous Bacchus drawn by panthers in the midst of frantic bacchantes followed by the besotted Silenus on his ass. In some places he was the physician, the healer, the saviour, the inspired or inspiring god.†

Alcohol has undoubtedly a medicinal effect in many maladies; it stimulates the fainting heart after shocks of every kind. Port wine is a potent

---

* *See* Dr. Richardson's Six Cantor Lectures on Alcohol delivered before the Society of Arts; and "Temperance and Abstinence" by Dr. W. B. Carpenter, F.R.S.

† *Ἰατρός, ὑγιατής, θεὸς σωτήρ.*

remedy in fevers; instead of raising it reduces the burning heat of the blood, and calms the delirium of the brain. Alcohol appears to arrest the action of zymotic diseases; as it prevents weak wines from fermenting. Like camphor, alcohol preserves animal matter; this is not now disputed. But may it not do more? May it not prevent the invasion of some kinds of zymotic diseases? I invite the attention of those who have portrayed the bad effects of alcohol to consider whether it does not prevent the action of various infections on the temperate. The neglect of this side of the question throws a doubt on many of their inferences. The deaths ascribed to zymotic disease in 1876 were 96,660, to alcoholism 1120; now it is evident that any effect depressing the prevalence of zymotic diseases that kill their tens of thousands will save the lives of thousands: the same sanitary improvements that diminish the prevalence of disease undoubtedly diminish intemperance and feverish thirst.

Experience that speaks so strongly against excess speaks as decisively in favor of the use of wines which I take as the type of alcoholic drinks. The experience of mankind is in its favor. Wine is taken generally at and after meals in society, when indeed there are no *Symposia* or *Noctes* with Plato and Christopher North for reporters, but common conversation, and at public dinners, after-dinner speeches which are often amusing and in England sometimes eloquent. The dinners at the Mansion House and in the halls of the City Companies are examples; so are the banquets in support of hospitals, literature, science, and charities; so are the club dinners in connection with the meetings of learned societies. Dr. Richardson, like Luther at the diet of Worms denouncing Indulgencies in the presence of the Emperor, would dash down the cups before the Lord Mayor and the Masters who are supposed to be able to judge of the effects on their health of what they eat and drink. He denounces alcoholic drinks altogether; the Sage suppresses neither the cellar nor the kitchen, but insists on the temperate use of the contents of both. The temperance which is now the rule in the cultivated classes and the provident orders of all ranks, will, we may hope, reach in the end the whole of the community. Education will supply the mind with natural stimulants; and science will teach wine-bibbers who sin from ignorance, as some among the publicans do, like Van Dunck never drunk but drinking spirits daily, that their life breaks down inevitably under such a system. They will then leave no longer so many widows. The grocers as well as the publicans will be alive to the dangers of the spirit trade. It is a remarkable fact that the official returns show that the mortality of grocers was at every group of ages much higher in the year 1871, after they had begun to retail spirits, than it was in 1860–61; *see* table below.* The deaths from alcoholism among the other classes in that year were nearly the same as they were in 1860–61.

* Mortality per Cent. of Grocers, 1860–1 and 1871.

Ages - -	15–	25–	35–	45–	55–	65–	75 and upwards.
Years 1860-1 - -	·531	·840	·923	1·280	2·053	4·334	12·488
1871 - -	·592	1·115	1·021	1·466	2·567	5·461	13·442
Excess in 1871 - -	·061	·275	·098	·186	·514	1·127	·954

Note.—In 1860 an Act of Parliament was passed by which, for a license of £2 2*s*. or £3 3*s*., according to rental, grocers or dealers in other commodities than wines and spirits might sell *wine* in quart or pint bottles in any quantity less than two gallons not to be consumed on the premises; previous to that year the license was £10 10*s*., and the quantity was unrestricted. In 1860 also an Act of Parliament empowered licensed dealers in spirits (grocers among others) to take out a license, additional to the £10 10*s*. license for spirits, authorizing them to sell *foreign liquors* in reputed quart bottles or bottles in which the same may have been imported; while a further Act passed in 1861 allowed the sale of Foreign or British Spirits in any quantity not less than one reputed quart bottle. In 1872 the law compelled retailers of wines or spirits to get a magistrate's certificate prior to the grant of a license.

The clergy of the Church of England are quite justified, without insisting on total abstinence, in endeavouring to promote temperance of which they themselves experience the full benefit. The rate of mortality among publicans of 35 and upwards is 3·94 per cent.; among the English clergy it is 2·96. Their duration of life is shown below* in comparison with that of other classes. The report of the Lords Committee will no doubt be of great practical importance, and may suggest further scientific research to determine the points at which wine loses its natural virtues and becomes a poison. Dr. Parkes's careful experiments were made on a soldier not in company, and the effects on his mind were not noted; yet, that is more striking and important than the effect on temperature, and on the secretions. The effect on the brain stands before that on the heart.

In dealing practically with alcoholism two kinds of treatment are in fine distinguishable, both wisely recognised by the Church Society.

TOTAL ABSTINENCE, voluntary or enforced, is indicated in the case of the dipsomaniac; so it is in some idiosyncrasies. The savage cannot be entrusted with *fire-water* in any form; he has not learnt self-control. The same may be predicated of the roughs of Liverpool and other cities. Spirits cannot be withheld altogether from them; but the number of public-houses might be reduced in their quarters to a minimum. The publicans ask to be allowed to refuse to serve people known to them as habitual drunkards;† and their request should be conceded, coupled with the condition that where a drunkard is fined an equal fine should be imposed on the vendor of the intoxicating liquors. The teetotallers should have free scope among this class of the population; for their exertions Father Matthew and his followers deserve the highest praise.

TEMPERANCE is the more excellent way. It is rational, it is founded on experience, and it is in itself a virtue. Men have many wants: they want water, but only a certain quantity; they want wine, but only a certain quantity; they want meat, but only a certain quantity; precisely as a working steam-engine wants water and wants fuel in definite proportions. But the wonderful human machine supplies its wants automatically. It

---

* DURATION OF LIFE in various CLASSES of the COMMUNITY, notably in those of CLERGYMEN and PUBLICANS.

AGE. (x)	MEAN AFTER-LIFETIME IN YEARS AT AGE x.				
	By English Life Table. (Males.)	By Healthy Districts Life Table. (Males)	Of the Clergy.	Of other Protestant Ministers.	Of Publicans.
15 - -	43·2	47·2	—	—	38·0
25 - -	36·1	39·9	42·1	41·6	31·3
35 - -	29·4	32·9	33·8	33·8	25·4
45 - -	22·8	25·7	25·7	26·0	20·0
55 - -	16·5	18·5	18·6	17·9	14·9
65 - -	10·8	12·0	11·9	11·4	10·3

The Table may be read thus:—At the age of 25 the mean after-lifetime of the Clergy is 42·1 years, of Publicans is 31·3 years, the difference in the two classes being nearly 11 years; thus the future lifetime of the Publican is one-fourth or 25·7 per cent. shorter than that of the Clergyman. The mean after-lifetime at age 25 is 42·1 years among the Clergy, 41·6 years among Protestant Ministers, 39·9 years in the Healthy Districts among populations chiefly agricultural, 36·1 years among the whole population, and 31·3 years among Publicans. Clergymen of this age have lived 25 years, and will on an average live 42 years longer, so their mean age at death is 67 years; while Publicans of the same age live on an average only 31 years longer, and their mean age at death is 56. They lose 11 years of life. At the age of 45 the mean after-lifetime of the Clergy is 25·7 years, exactly the same as that of the populations of the Healthy Districts; it is 26·0 years among Protestant Ministers, 22·8 years among the whole population, and 20·0 years among Publicans.

NOTE.—The above calculation of the mean after-lifetime is based for the Clergy on 59,084 years of life and 1105 deaths, for Protestant Ministers on 24,944 years of life and 472 deaths, for Publicans on 228,592 years of life and 7127 deaths. See Sup. to 35th Report, pp. clxxii-clxxv.

† See evidence of R. A. Cole, Chairman of Licensed Victuallers Protection Society (qu. 10,242) Lords' Committee.

has appetites; it measures its wants; and the more useful a thing is the more it is desired; but the desire has to be regulated by a higher faculty; for beyond a certain amount the good becomes evil. How can the separating line be drawn? It differs in every man. As organisms differ, so do their wants. But there are limits to the exercise of the appetites; and every man has to cultivate the observance of a varying standard, changing with climate and season; he changes from day to day, and so his wants fluctuate, but there is a middle point through which temperance draws the line. There is no better exercise for this virtue than the regulation of the appetite for wine and other foods. Temperance shuns both extremes of defect and of excess, and the man who does this is trained to virtue. The clergy can inculcate temperance as a religious duty.

Virtus est medium vitiorum et utrinque reductum.*

The temperance party will have a wider field of action than the total abstainers. It has statistical science, morality, and religion on its side, Aristotle and St. Paul alike are with it. All the clergy here are at one; while some might have scruples against the denunciation of the vine—the beneficent vine—which had been a sacred symbol; and wine which was poured out at the first miracle and at the last supper. The archbishop, if he could not ask them to fill the loving cup with water, might well address the city companies and induce them to drink the best wines in smaller quantities. And the Church Society might even extend its principles of temperance to dishes as well as glasses; to luxuries of every sort; for excesses of solid food are to individuals as injurious as any other excesses.

The primary step to put a stop to deaths from alcoholism will be to secure pure air and ample supplies of pure water in every town—every house; for bad air disorders the head; and water, as well as wine and ale, is required for drink by men as well as by women and children. Tea, coffee, and cocoa are stimulants and will replace, but not supersede, wine, and all we have to ask the brewers is to perfect the process they have carried so far of brewing sound ale of a low alcoholic standard.† Pasteur has shown in his "Maladies des Vins" how wines might be matured rapidly by exposure to a high temperature; so that the merchants might supply ripe wines at prices unloaded with the interest accumulating through many years. The noxious alcohols should be treated as poisonous adulterations.

The capital antidote to intemperance is knowledge, not merely of reading and writing, but of the bad effects of excesses of every kind. Science has on it claims which it will meet. Let us convince the publicans and the wine merchants—as I hope we are doing—that frequent drinking throughout the day kills them, cuts their lives short, and floats them from their families to the cemetery before their time, and I feel convinced Offices may then insure their lives at ordinary rates. To the grocers selling spirits and others exposed to temptation we say—Beware; intemper-

* Horace, in his epistle to Lollius and elsewhere, paraphrases the fine passages in Aristotle on the golden "mean."

"This, then, we must first observe, that things of this kind are naturally destroyed "both by defect and excess (for it is necessary in the case of things which cannot be "seen to make use of illustrations which can be seen) just as we see in the case of "strength and health; for too much as well as too little *exercise* destroys strength. In "like manner *drink* and *food*, whether there be *too little* or *too much* of them *destroy* "*health*, but moderation in quantity causes, increases, and preserves it. The same "thing, therefore, holds good in the case of *temperance*, and *courage*, and the other "virtues; for he who flies from and is afraid of everything, and stands up against "nothing, becomes a coward; and he who fears nothing at all, but goes boldly at "everything, becomes rash. In like manner, he who indulges in the enjoyment of "every pleasure, and refrains from none, is intemperate; but he who shuns all, as "clowns do, becomes a kind of insensible man. For temperance and courage are "destroyed both by the excess and the defect, but are preserved by the *mean*." Ethics B. II., c. 3., R. W. Browne's translation.

† The Austrian beer does not intoxicate; why should the best English beer?

ance brings death. Our skilled artizans are men of keen sense; their hands for fine work must be steady, and they will not with their eyes open run the risk of trembling delirium. The navvy takes care of himself according to his lights; he is the last man to poison himself or to run into neck-breaking dangers if he knows it. He leaves that to his betters.

We may thus hope to see the day when the deaths from alcoholism in the returns will approximate to zero; they are declining.

II.—Constitutional Diseases.

The first Order of this Class consists of the diathetic diseases. The most fatal disease presents several varieties, and affects women more than men. Its common name is cancer, to which 11,604 deaths were referred. It is a slow, chronic, painful disease, in which medicine can yet do nothing; and the surgeon's knife, except perhaps in the case of the epithelial variety, affords only temporary relief from suffering and death. The deaths under this head have increased from 4808 in 1849 to 11,604 in 1876. To 1,000,000* living, the annual deaths in the five quinquenniads 1850–74 were successively 302; 327; 369; 404; 443. The mortality was 480 and 481 in the last two years. Thus increase of cancer, a strange new growth, is much more rapid than increase of population. The causes of death during the whole of the period have, in the majority of cases, been returned on medical certificates; and as the diagnosis of the disease, when affecting the uterus and internal organs, has been facilitated by the speculum and other means, the increase may be partly nominal. Diseases now referred to cancer may have been formerly undistinguished or referred to other heads. But after every allowance has been made, it is evident that there is a real increase of deaths by cancer in England. Of every 1000 deaths 23 are by cancer. It is a disease that chiefly infests men and women of mature age. Cancer demands inquiry, the more as it (1) certainly runs in families, and (2) the question may arise whether this living heterologous growth is in any other way communicable except by hereditary transmission.

The tubercular order is of pre-eminent importance. The diseases of this order were fatal to 70,179 persons of all ages, of whom 51,775 were destroyed by phthisis (consumption), 7769 by tabes mesenterica, 7546 by hydrocephalus, and 3089 by scrofula. There is one cheering circumstance about these diseases. They are to a considerable extent under control; give way to hygienic measures; and have decreased step by step during the last 27 years. The mortality was at the annual rate of 3655 in the first, 3018 per million living in the last five years; and at the rate of 2908 in 1876.

III.—Local Diseases.

This class of diseases is sub-divided into eight orders corresponding with the several organs of the body. The diseases are generally of the nature of inflammation, or the remoter consequences of that too common affection. Sometimes they are the result of chemical deposits as in calculus. They were the causes of 229,379 deaths. At the top of the orders are the diseases of the brain, spinal marrow, nerves and senses, to which 67,737 deaths were due. Next follow 31,951 deaths by affections of the heart and its appendent arteries and veins: in the five quinquenniads the annual rate of mortality rose from 700 to 1196; and in 1876 the rate ran as high as 1324. Heart disease has thus rapidly increased; but the increase is at least to a certain extent only apparent, for what was once returned as

* 1,000,000 is the basis of the annual rate in this Letter unless the contrary is expressed. See Table 4, Appendix to Report.

dropsy is now recognised by the progress of pathology as due to defects of the central circulating organ.

The blood has to circulate through the lungs in every one of its rounds, and life is sustained by the incessant absorption of oxygen and the exhalation of water and carbonic acid through thinsided air cells. Thus the respiratory system is the keystone of the arch of human life. By the affections of this system 90,034 persons died; among them 54,055 of bronchitis, 24,492 by pneumonia.

Arranging diseases in the order of their fatality two stand at their head; bronchitis and phthisis. One death in four (25·5 per cent.) of the total deaths were by bronchitis, pneumonia, and phthisis.

The stomach is the centre of the great *Digestive system*; extending from the mouth downwards, and associated with innumerable secreting glands, some large, like the liver and pancreas, others scattered over the whole intestinal surface. It pours out juices that will digest its own membranes when they are not permeated by circulating blood, and it absorbs liquified aliment. That this marvellous apparatus—through which the pabulum of life enters the system—should be subject to derangements at various stages of existence is not strange. 24,592 persons died of diseases of the digestive organs; namely, 7449 by gastritis, enteritis, peritonitis, ulcerations, 1082 by hernia, 2406 by stricture and other stoppages, 119 by fistula, 2599 by other intestinal diseases, 10,832 by liver diseases (including 523 by ascites), 96 by spleen affections, and 9 by disease of pancreas, not easily or frequently detected.

The organs through which the metamorphosed nitrogenous or phosphatic elements escape as urea or phosphatic salts, are subject to numerous fatal derangements, which have been studied carefully during recent years. Chemistry has detected the nature of some of these affections. 9889 deaths were ascribed to diseases of the urinary organs. The progress of pathology rather than the progress of these diseases may be traced in the rise of the fatal cases from 2950 in 1849 to 9889 in 1876. *Nephria* is a new name of a really newly found disease not yet thoroughly understood, first called after the name of its discoverer Bright's disease. To it 400 deaths were referred in 1849, and 4100 in 1876. Calculus on the other hand caused 219 deaths in 1849 and 242 in 1876. Cystitis has unfortunately increased, and this increase demands the attention of Operators. Diabetes was the cause of 910 deaths.

The diseases of the organs of generation were fatal to 1288 persons including 327 who died from ovarian dropsy. Thanks to Spencer Wells, and other skilful operators, the lives of many women have been snatched from the jaws of this cruel disease. The operation requires the utmost precaution and skill which cannot in all cases be commanded; otherwise we might not, when the deaths from the disease were 214 in 1849, have had to record 327 deaths from ovarian dropsy in 1876.

The organs of locomotion are subject to disease but not very often to fatal disease; 2116 persons died of diseases of the bones and joints.

The *integumentary system* on the surface of the body is subject to the most various growths, parasitic and other, in contact with the atmosphere that surrounds us. Many of these affections have disappeared with the progress of cleanliness; their germs are washed away with soap and water. If people in general—and sweating workmen in particular—could be induced to treat their skin as well as grooms treat the hides of horses, not only the common skin diseases but other infectious ailments would be diminished and might disappear. In the meantime it is satisfactory to find that we have got rid of the leprosy so common in the dark and dirty middle ages, when offensive smells were held to be odours of sanctity. 867 deaths were due to phlegmon, 382 to ulcer, and only 523 to various specific skin diseases. The ulcers of the legs of honest, hardworking laborers are not so carefully and skilfully treated as they deserve to be.

IV.—Developmental Diseases.

These diseases are incidental to the birth and growth of the body. They include premature births; and malformations chiefly in the young; atrophy and debility; old age; and childbirth, which, though not a disease, is sometimes the cause of the death of the mother.

I propose to notice this at some length.

Childbirth: how it is a cause of death.

Childbirth is a physiological process; but to the mother and the child—next to conception and death—it is the most important event in their existence. It is a revolution: (1) to the child which, after absorbing its nutriment and oxygen from the mother's blood, takes both directly from her milk, and from the air; (2) to the mother, who no longer carries her child in her bosom, but in her arms. So marvellous, however, are the adaptations of nature that the mother, with the slightest assistance, survives in the great majority of instances, and with the aid of the art of the midwife or the physician the danger is reduced to a minimum.

There is scarcely a person of note whose life—or whose mother's life—might not at one time have depended upon the skill of a midwife. Every childbearing woman looks for some help in her travail. Newton had a narrow escape. Gœthe begins his remarkable autobiography by observing that through the unskilfulness of the midwife he was born for dead, and only after manifold efforts of those around him saw the light (1749). His misadventure so impressed his grandfather Textor, the Mayor, that he introduced an obstetrician, and instituted or restored the school of midwifery in Frankfort.* What had been his danger proved a means of safety to the city. Shortly afterwards the Royal Maternity Charity was founded in London. This admirable institution was established in 1757 for the instruction and employment of midwives to attend married women in their confinements at home.

In treating of the mortality from childbirth we have to consider several cases. *Two lives* are at risk, and the following are the four possible combinations of their fates:—

(*a.*) The mother (m) and child (c) generally survive - mc
(*b.*) The mother survives (m), the child (c^1) dies - mc^1
(*c.*) The mother dies (m^1), the child (c) lives - - m^1c
(*d.*) The mother dies (m^1), and the child dies (c^1) - m^1c^1†

There is generally one *child* at a birth; but there may be two, three, or more; and they may be still-born, or die immediately after delivery, or die in the first month (called *chrisomes* in the old Bills of Mortality).

---

* Dichtung und Wahreit aus meinem Leben.

† Note.—From the returns of the Royal Maternity Charity it appears that 9019 ($m+m^1$) mothers were delivered; 8998 (m) surviving, 21 (m^1) dying; while 9117 ($c+c^1$) children were born, of whom 8832 (c) lived, 285 (c^1) died, including 244 still-born, 41 live-born. Then before delivery we have these four probabilities:—

mc ·96648 mother and child will live;
mc′ ·03119 mother will live and child die;
m′c ·00226 mother will die and child survive;
m′c′ ·00007 mother and child will die;

note that $(m+m^1)(c+c^1) = 9019 \times 9117$ is the divisor of the numbers from which the probabilities *mc*, &c. are derived.

Thus the probability that the mother will live, is ·96648 + ·03119 = ·99767; will die, is ·00233. The probability that the mother will live and the child will die is ·03119. The probability that the child will live is ·96874; that it will die is ·03126. Mother and child survive in 966 deliveries out of 1000; mother lives, child dies in 31; mother dies, child lives in 2 cases; in only ·07 mother and child die. In the case of two or more children, the problem is somewhat more complicated.

The *mother* usually survives; but in a few rare cases she dies during, or soon after, delivery, the child surviving or dying.

The cases of still-born children are not returned to this office, and the registers do not enable us to distinguish the deaths of mothers or children in the three classes (*b.*, *c.*, *d.*). The rare instances in which the mother dies and the child survives are very sad. To turn over the *black book* of the office, and to find the *death* of the young mother at a date earlier than the *birth* of the child is recorded in the *red books*, affects the coldest heart. The orphan enters life without a mother, but it lives and may perpetuate its race's virtues.

In the still sadder case mother and child are entered together in the same *black book*, which may be the only lasting proof that they have lived. Stem and seed perish together. These cases are fortunately very rare.

I have every year specially dwelt on the causes of death in childbirth for two reasons; firstly because the lives themselves are at the most precious age, and secondly because skill can do more here in averting danger and death than in other operations.

Such Deaths* are followed year by year in Table 14, which shows that in 30 years (1847–76) no less than 106,565 mothers died in childbirth; that is, 5 to every 1000 children—*one* to every 200 children—born alive. The proportions varied from year to year; 42 mothers died in 1857 and 69 in 1874 to every 10,000 children born alive, and these were the extreme limits. In the year 1876 the mortality of mothers was 47.

This is a deep, dark, and continuous stream of mortality. How can it be accounted for? In the present state of obstetrical science a certain number of deaths from divers causes is inevitable. There are cases which foil the most consummate skill. Then there are difficult cases which defeat the ordinary practitioner, and the instructed midwife. But great numbers of midwives have never been instructed and have never mastered their art so as to deal with intricate cases. The Obstetrical Society of London shows in its valuable Report that in the country villages from 30 to 90 per cent., in the small towns of 10,000 inhabitants 5 to 10 per cent., of the cases are attended by midwives. Perhaps as large a proportion is attended by midwives in the large manufacturing towns as in the villages. In the east end of London also from 30 to 50 women in 100 delivered are attended by midwives; in the west end of London few.†

In answer to the question "Are the women instructed in midwifery," the Committee of the Society on Infant Mortality says, "Answers in the "negative have been received from all parts of the country, with the "exception of Glasgow and Sheffield." From "several districts the "replies indicate not merely a want of any special education, but "gross ignorance and incompetence, and a complete inability to contend "with any difficulty that may occur." The Committee notices that in London many women are practising who have received a certain amount of instruction at various institutions. Thus a very large number of the mothers is attended by midwives; some instructed in practice, others incompetent to deal with ordinary cases of difficulty. A large proportion of the mothers is attended by physicians, surgeons, and apothecaries; some at the head of their art in Europe, and others skilful or unskilful in various degrees. Dr. Pitman, Registrar of the College of Physicians, says, "To the best of my belief the College included "midwifery as one of the subjects of its examination as early as 1518." The Licentiates of the London Apothecaries Company have been examined in midwifery since 1830.‡ There appears to have been a

---

* Page 279. *See* also Tables 12 and 13.

† 34th Report of Registrar-General, pp. 225–6.

‡ Mr. Wheeler, the Secretary of the Society of Apothecaries, states that in consequence of a correspondence between the Obstetrical Society, Sir Robert Peel, and the Company in 1829, the next printed regulations enjoined two courses of midwifery during the second year of study.

general, but not a special, examination in midwifery by the examiners in both the College of Physicians and the Hall: at the College of Surgeons the midwifery license is a distinct qualification from that of membership. It is granted by the college under a clause in the Charter of the 18th of March 1852. The license was conferred for the first time on the 1st of December 1852.

There is no examination in midwifery for the membership.

The midwifery examinations, the nature of which is published by the College, "are still in abeyance arising out of the difficulty in obtaining "examiners." Thus a registered M.R.C.S., without any other qualification, has passed no examination in midwifery. Many are in large and successful midwifery practice; others, it is to be feared, must labor under disqualifications disadvantageous to themselves and their patients.

Under this state of things *four thousand six hundred and ten* mothers died in childbirth annually in the five years 1872-6. What number of these lost lives, have we any reason to believe, would have been saved, had all been watched over by skilful midwives acting under skilful physicians?

I must here notice two remarkable institutions which have furnished returns that will enable me to answer this question. The Royal Maternity Charity was, as I have said, founded in 1757. It had in 1876 two physicians and 22 midwives (located in different parts of London) who delivered in that year 3069 married women at their own homes. The midwives are instructed by the Charity's Lecturer, Dr. J. Hall Davis. 2952 of the women were "delivered by the midwives themselves;" in 117 cases the physicians were called into consultation, either from complication in the delivery, or from serious illness before or after labour.* The cost was not more than 9*s.* a case. On an average a midwife delivered 134 women in the 365 days; at average intervals of less than 3 days (2·7 days); she may also have private practice. The midwives are superannuated when old. There is an auxiliary fund managed by visiting ladies; who are authorized to expend about 5*s.* in each case of need. "It was "painful to hear from the midwives, 'they report,' of the lamentable and "destitute condition in which some of the patients were found." Others were in better circumstances. Such is the class of cases.

Now the deaths of mothers to 9019 delivered by the Royal Maternity Charity in the three years 1875–7 were 21. The mortality was at the rate of 2·33 to 1000 deliveries. Dr. Roper, M.D., one of the physicians of the Charity says, "Our maternal mortality is as correct as possible, because "whenever a patient is taken ill after confinement, her case is followed "up either to recovery or death."†

The Birmingham Lying-in Charity was founded when the *Lying-in Hospital* of that town was broken up, and has similar rules to those of the London Maternity Charity. The mothers are attended at their own homes by four instructed midwives, acting under a Consulting Medical Board. 8607 mothers were delivered in ten years, of whom 20 died. The mortality was at the rate of 2·32 deaths to 1000 mothers delivered, or as nearly as possible the same as in the London institution. The midwives are not allowed to practise privately; and they must be fully employed, as each of the four midwives delivered about 215 women annually. The physician was called in one time in sixty. Precautions are taken against the spread of puerperal fever. The Birmingham Charity has the merit of publishing a very interesting statistical report.

At the rate of mortality among the patients of these two charities in London and Birmingham, the annual deaths by childbirth in England and Wales

* Report of Charity for 1876, p. 25.

† Letter dated March 25th, 1878.

would have been 2009 ; the *actual deaths* registered *were* 4610 ;* so that 2601 mothers *perish annually through* the want of such an amount of care and skill as the midwives, acting under the consulting physicians of the two charities, bring to bear in their attendance.

Some allowance should be made for the circumstance that these charities only undertake to attend *wives*, and that they have apparently fewer than usual of mothers bearing their first children (*primiparæ*). Upon the other hand, these mothers are often poor ; and I have a further careful return of 4390 cases in the private practice of Mr. G. Rigden of Canterbury, where the deaths were 9 in 4390 deliveries, or 2·05 per 1000.† Other private practitioners, keeping equally accurate accounts, could no doubt supply results equally favourable.

Childbirth is not fatal in itself, but by reason of certain supervening diseases or injuries, which should as well as "childbirth" be always stated in the medical certificate of the cause of death in conformity with the instructions in the medical certificate books in the hands of all registered practitioners. In the five years 1872–76, of the 23,051 deaths in childbirth, 10,498 were referred to *metria* (puerperal fever), 8400 to specified diseases or injuries, and 4153 to causes not specified, and therefore imperfectly certified. By distributing the 4153 proportionally over the specified causes the following approximate numbers are obtained under the several heads:—

ENGLAND and WALES—DEATHS from METRIA and other fatal DISEASES or INJURIES in CHILDBIRTH in the Five Years 1872–76.

NOTE.—In this Table the 4153 Deaths simply returned as in *Childbirth*, without distinguishing the precise cause of death, have been distributed proportionally over the several heads.

	Deaths in the Five Years 1872–76.	*Annual* Deaths in the Five Years 1872–76.
Metria and other Diseases or Injuries in Childbirth	23,051	4610
Metria (Puerperal Fever)	12,805	2561
Other Diseases or Injuries in Childbirth	10,246	2049
Causes other than Metria:—		
Miscarriage	356	71
Abortion	568	114
Puerperal Mania	573	115
„ Convulsions	2692	538
Extra uterine fœtation	54	11
Cæsarian operation	16	3
Placenta prævia	1308	262
Retention of Placenta	354	71
Flooding	3524	705
Rupture of Uterus	181	36
„ Perineum	1	·2
Phlegmasia dolens	456	91
Breast Abscess	51	10
Deformed Pelvis	112	22

* *See* Table at foot of page 245.

† *See* Registrar General's 33rd Annual Report, p. 412.

Puerperal fever is the most fatal of specified causes; it sets in some time after delivery and has to be strictly guarded against, for it is contagious in the highest degree. Where a case occurs, the midwife of the Birmingham Charity is not allowed to attend cases for some time. Some other zymotic diseases appear to communicate infections to puerperal patients. Miscarriage and abortion are imperfect descriptions; in themselves they are not fatal. Phlegmasia dolens and breast abscess are sequels. Embolism, and air entering the veins are rare affections; they are not distinguished. Deformed pelvis necessarily obstructs delivery, and sometimes to a fatal extent. Cæsarian operation was fatal in 3 cases annually. For rupture of uterus before delivery there is no preventive, no cure. About 36 women die from this cause annually. Puerperal convulsions are fatal to 538, puerperal mania to 115, women yearly. Such affections are always serious complications, and in the hands of even the skilful physician are sometimes fatal.

There remain flooding before, during, or after delivery fatal to 705; and retained placenta fatal to 71 mothers annually under the present system of practice. These are nearly all really cases of flooding, and so are 262 cases of *placenta prævia*, making in all 1038 cases of fatal hæmorrhage. The placenta fixed over the os uteri presents to the physician extraordinary difficulties; and bleeding goes on when it is partially detached until in some cases the clotted blood occupies the place of the child, while the serum oozes away. It is in the cases of ordinary flooding that the skilful midwife saves the mother's life. The authorities agree that the afterbirth is usually expelled in less than 20 minutes; and that where there is delay beyond half-an-hour the utmost care is required. The removal of the placenta by pressure and by gentle mechanical help excites the contractions of the uterus and at once stops the flow of blood. If this is not done, the patient bleeds to death; the heart, no longer filled with the vital fluid, struggles in vain; pangs and syncope follow.

This question of the placenta is of so much practical importance in its connection with deaths by hæmorrhage that I have addressed queries on the subject to the two lying-in charities before referred to in order to

---

ENGLAND AND WALES. — Annual Deaths of Mothers to Deliveries, 1872-76, according to the Mortality among (1) the Total Population; (2) patients of the Royal Maternity Charity of London; and (3) patients of Mr. G. Rigden, M.R.C.S., of Canterbury.

Annual Births of Liveborn Children, 1872-76.	Annual Deliveries, estimated from the *proportion* of Liveborn Children to Deliveries prevailing among Patients of the Royal Maternity Charity.	Annual Mortality of Mothers to 1000 Deliveries according to		
		Deliveries deduced from Births and Deaths registered in England, 1872-76.	Experience of the Royal Maternity Charity, 1875-77.	Experience of Mr. G. Rigden, M.R.C.S.
		5·34	2·33	2·05
		Annual Deaths of Mothers at the above Rates.

* The deaths of Mothers according to the experience during ten years of the Birmingham Lying-in Charity would be 2004.

Note.—The women attended in the above period by Mr. Rigden numbered 4390, of whom 9 died. They were of all classes above paupers; and Mr. Rigden states that he keeps a record of all midwifery cases, noting the peculiarities of each case, and has them under his notice for at least two weeks, or longer if he has reason to fear unfavorable symptoms. As his attendance is private and entirely unconnected with any lying-in charity, his experience embraces a due number of first confinements.

ascertain the actual prevailing practice among their instructed midwives; and the following are the answers with which I have been favoured :—

The following questions were addressed to Dr. J. Hall Davis, M.D., F.R.C.P., the physician and lecturer to the Royal Maternity Charity. The following are his replies :—

[NOTE.—Cases of placenta prævia are excluded from this inquiry.]

Question 1.—What is your general practice as to the placenta, when it is retained, say an hour? And what time generally elapses before you think it necessary to interfere?

When the placenta is retained within the uterus for an hour, we then counsel its removal at the end of that time. Should, however, hæmorrhage take place, I advise its removal forthwith. If it is not morbidly adherent, it is best removed by grasping the uterus and expressing it. I am opposed to the removal of the afterbirth by dragging at the funis. If there should be difficulty from morbid adhesion of placenta or spasmodic contraction with or without hæmorrhage, the midwife is required to call in one of the physicians or a neighbouring surgeon.

Question 2.—In such cases what precautions do you take to guard against hæmorrhage—internal or external?

Grasping pressure on uterus; and if from history of former labours hæmorrhage is anticipated, ergot (liquid essence) should be given towards the close of the second stage. Ice will be useful in some cases passed into the vagina, or applied to the hypogastrium. Injections of ice cold water into the rectum. If the placenta is not thrown off it should be removed at once.

Question 3.—What leads you to suspect internal hæmorrhage?

An enlarged flabby uterus, pallid face where previously it was not pallid, a weak, intermittent, or extinct pulse at the wrist, sighing, gaping or yawning, extreme restlessness (jactitatio). The introduction of one or two fingers into the uterine cavity finds an obstructing clot at os uteri, sometimes in upper part of vagina also, and an accumulation of coagulated blood within the uterus. These must be removed, and if hæmorrhage continues with relaxed uterus, an injection into the uterus of cold water or of a solution of perchloride of iron should be resorted to.

By the courtesy of J. D. Goodman, Esq., the Chairman of the Board of the Birmingham Lying-in Charity, similar questions were addressed to the four midwives of the Charity. The following are their replies*:—

Replies to Question 1 :

Answer from A.—I do not remember ever having a placenta retained an hour without its being necessary to interfere; it would be impossible to put a limit as to time; sometimes hæmorrhage takes place immediately after birth, sometimes not for 20 minutes or half an hour; directly I perceive any sign of loss I should insert my hand and remove it.

Answer from B.—I introduce my hand and take the placenta, after waiting 45 minutes. If hæmorrhage sets in I should interfere at once, if no hæmorrhage I should wait, as stated, three quarters of an hour.

Answer from C.—If there is no hæmorrhage I should not interfere with a case of retained placenta under two hours; I should then insert my hand and extract placenta.

* The following are the names of the four midwives who furnished the above information : U. Phillips, M. Whittock, M. Francis, and M. Humfrey. The four honorary surgeons to the Birmingham Lying-in Charity were Dr. T. Savage, Dr. E. White, Mr. T. H. Ravenhill, M.R.C.S., and Mr. W. S. Mann, M.R.C.S.

Answer from D.—In my general practice, if the placenta is not expelled spontaneously within 15 to 20 minutes after the birth of the infant, I take measures to withdraw it, observing due precaution in so doing.

Replies to Question 2 :

Answer from A.—By firm pressure on the uterus, and give the patient ℥ xv of liq. ergot in water.

Answer from B.—If patient has suffered at her previous confinement with hæmorrhage, I give ergot before the birth of the child; this refers to external hæmorrhage. I never had a case of internal hæmorrhage; and if I met with such I should at once send for medical assistance.

Answer from C.—To guard against hæmorrhage I press the abdomen.

Answer from D.—I excite uterine contraction manually and ergotically, and if I suspect internal hæmorrhage, I explore the uterus and remove the placenta membranes and coagula, and bind and compress the uterus as soon as I have swept its cavity. The signs that lead me to suspect internal hæmorrhage before the expulsion of the placenta are distension of the uterine walls, loss of contractility, and a peculiar action of the uterus by which it fills and refills with blood even with firm pressure upon the fundus.

Replies to Question 3 :

Answer from A.—The uterus becomes much distended, and the patient becomes faint, frequently sick, her face becomes livid. I should also judge from the state of the pulse.

Answer from B.—I should ascertain internal hæmorrhage by the state of the pulse, fainty appearance, and such like indications, enlarged state of abdomen, and from the state of the uterus.

Answer from C.—Patient appears faint, the abdomen enlarged, and the state of the pulse.

Answer from D.—On the part of the patient symptoms of syncope, pallor and coldness of the skin, serious loss of blood, with other general symptoms.

The replies of the midwives of the Birmingham Lying-in Charity to the questions submitted by Dr. Farr having been read, it was resolved, at a meeting of the Medical Board, held March 21, 1878 :—

In considering the replies of the midwives, this Board is of opinion that on the whole they are satisfactory, and may fairly be considered to account for the successful practice of the midwives of this Charity in the cases where the complication of retained placenta has been present.

Only in cases of such extreme urgency as severe hæmorrhage, and when the services of the medical officer cannot be very quickly obtained, does this Board consider it justifiable for the midwife to introduce the hand into the uterus.

Celsus, at the date of the birth of Christ, thus describes the Roman treatment of the afterbirth, which appears to have been perhaps too summarily removed; but the description of the operation is very brief :

Quoties autem infans protractus est, tradendus ministro est. Is eum supinis manibus sustinere; medicus deinde sinistra manu leniter trahere umbilicum debet, ita, ne abrumpat, dextraque eum sequi usque ad eas, quas *secundas* vocant, quod velamentum infantis intus fuit; hisque ultimis apprehensis, venulas membranulasque omnes eadem ratione manu diducere a vulva, totumque illud extrahere, et si quid intus præterea concreti sanguinis remanet.—*A. Corn. Celsi Medicinæ. Lib. vii. cap.* 29.

Mr. G. Rigden of Canterbury, whose returns have been quoted, thus replies to these queries :

[Mr. Rigden distinguishes "retained placenta" in the earlier months from the same retention in full term cases, with which alone we have now to do.]

Answer to Question 1 :

After the patient has had a little rest, or certainly within half an hour, I proceed to remove the placenta; I remove it at once if there is hæmorrhage; 1st. by grasping the uterus through the abdominal walls, and 2nd, if necessary, by insinuating my hand into the uterus, and thus removing it.

Answer to Question 2 :

I invariably apply a *binder* immediately after the expulsion of the child, and if there is fear of hæmorrhage apply a large pad between it and the abdomen over the region of the uterus.

Answer to Question 3 :

I have not met with such cases for several years past ; but should there be much faintness after labour, I should be particularly careful in examining the uterus both externally and internally. I should remove any clots that were in the uterus, and would prefer injecting warm water at a temperature rather above 100° to any other injection.

The books and manuals on midwifery in English and French are now very much at one on this question. It must be so. The vessels of the uterus are in direct communication with the mother's heart. They are naturally torn and closed by the contraction of the uterus. So long as any portion of the placenta remains in the uterus complete closure is impossible and hæmorrhage is imminent. After a slight rest if contraction be not spontaneous it is provoked by pressure above and by the removal of the afterbirth. The womb then does its duty and every open vessel is sealed. A judicious practitioner like Mr. Rigden proceeds to remove the placenta within half an hour. The Obstetrical Society, in "Suggestions to the Medical Council with reference to Duties of Midwives," proposes to make it a regulation that in labor the midwife shall "send for help" "in every other case where any symptom appears indicating exhaus-" tion or threatening *danger* either to mother or child; and specially in " every instance in which the *afterbirth* is not expelled within *half an* " *hour after the birth of the child.*"

The following is an instance of a different practice which was brought under the notice of this office. It throws light on some of the deaths by hæmorrhage. A death from childbirth occurred in the Outer Ring of London on January 13th, and inquiries were made of the Registrar. He writes on the 24th, or 11 days after the death :—"This evening I have " just registered a death from childbirth, and enclose the certificate." Omitting names, the certificate runs thus :—

I hereby certify that I attended ———— whose age was stated to be 29 years ; that I last saw her on the 13th day of January 1878 ; that she died on the 13th day of January 1878 at ———— ; and that to the best of my knowledge and belief the cause of her death was as hereunder written :

(*a*) Childbirth ; (*b*) extreme exhaustion ; (*c*) from anæmia of the heart (4 hours).

Witness my hand this 13th day of January 1878.

———— Registered qualification L. R. C. S. E.

Residence ————.

"*Anæmia* of the *heart*" is an unusual term, and further inquiry was made ; it apparently meant "absence of blood from the heart" which could only have resulted from hæmorrhage; but this was not explicitly stated. The L. R. C. S. E. expressed the greatest sympathy with the father of the lady as she was a personal "friend of my wife and myself." He attended promptly and the fine child was safely born after a short, natural, labor. In such another case he would, he writes, certainly adopt the same kind of treatment. The following history of the case is given in the husband's sad, but simple, words.

It should be stated that the delay, to be much regretted in the registration, led to the burial without a registrar's certificate by the curate of the Rev. ———— of ———— in the small cemetery of that place. In sudden deaths inquests may be held ; and registrars are instructed to communicate with the coroners in certain cases ; on this account the death should invariably be registered before burial as an inquest can only be held on "view of the body."

EXTRACT FROM HUSBAND'S LETTER, March 12th, 1878.

On Saturday evening January 12th, about 10 o'clock, Dr. ——— saw my wife in her bedroom, upon which he told me that she was approaching her confinement very satisfactorily, that the child might be born at midnight or thereabouts, and that he would not go to bed, but be ready at a moment's notice; that as nurse was watching the case there was no need for him to remain, and he went back to his house. About *2 a.m.* on the 13th he was again with my wife, and *20 minutes after* I heard the cry of the child. I stood outside the bedroom door listening, and heard her speak with a firm and cheerful voice, "O nurse, what is it? a girl, O I am so glad, do give me the "darling, let me kiss it," and I heard her kiss the child. She further remarked, "what a voice," meaning the child's. On one of my sisters entering the room she said to her in German, "J———, nurse wants you to take the child; isn't it a fine "baby?"

On the nurse coming from the bedroom to fetch something from another room, I asked her how my wife was, and she said, "all right, of course a little faint." Nurse having returned to my wife, and given her an egg beaten up with brandy in it, I heard my wife say, "that is right, that is just how I like it, I don't like much brandy in it." The time might then have been 10 minutes to *three* o'clock, or quite *three* o'clock.

About 20 minutes or so later, upon some remark of the Doctor, I think I heard my wife say, at any rate the nurse afterwards stated that she did, "wasn't I brave, you "will tell, nurse, my husband how brave I was." A little while after I heard my wife say, "Oh, I am so hot, nurse, fan me a little."

The bedroom door was ajar, and I heard my wife say, "Oh, what a pain," and the Doctor ask "where?"

I was told afterwards that she pointed to her chest, or said "in my chest." I think it was then that she asked, "am I flooding Doctor, if so, you can have ice?" Upon that he replied, "not at all, only keep quiet, it will soon be over." It might by that time have been *4 o'clock*. A little while later I heard Dr. ——— exclaim, "good gracious nurse, "what is this?" I was afterwards told that that had reference to convulsive twitchings in my dear wife's face. Some time elapsed, when suddenly Dr. ——— came to me, and in a very excited state asked whether I had any Eau-de-Cologne, adding, "I am "afraid your wife is seriously ill; she has suddenly taken a very bad turn." He then urged me to run quickly and fetch his assistant, to ask him to knock at his wife's bedroom door, and to ask her for some Eau-de-Cologne. This might have been about 4·30. I returned with the assistant at exactly 5 o'clock. I looked at my watch just as we were close to my house—the assistant Mr. F ——— having asked me what the time was.

As we reached the top of the staircase leading to the bedroom where my wife was, and I was about forcing my way to her, I was kept back by Dr. ———, with the remark, "only wait one moment." He entered with Mr. F ——— an adjoining room, and closed the door, and in a few seconds they both emerged from it and entered my wife's bedroom, I following them, Dr. ——— calling out "she is dead, she is dead." As I called, in my agony, my precious wife by her name, and bowed over her, though her eyes were already fixed, she made a convulsive movement with her *left* hand (for I was told she had turned herself over on the right, the opposite side she had been lying during delivery) to grasp mine. Mr. F.——— tried to moisten her mouth with brandy, felt for her pulse, and for the beating of the heart, and pronounced her life extinct. While I was leaning over that precious body, I heard Mr. F. ——— say to Dr. ———, "Haven't "you taken it away? take it away then and don't let the woman die with it in her."* Dr. ——— then put his hand under the bedclothes, and brought out the placenta, throwing it into some vessel, asking the nurse to remove it at once. They, Dr. ——— and his assistant, soon after left the house, but returned about half an hour later, took the nurse with them into the bedroom, and as I was afterwards told, bandaged the body * * *.

In recollecting her pale lips and blanched cheeks as she lay, the tears rushed to her father's eyes.

In questa forma
Passa la bella donna e par che dorma.

Such fearful cases should be judged by the Medical Council.

The 2601 deaths annually in England in childbirth over those 2009 that appear inevitable in the present state of obstetrical art are found in all classes of life; for Byron wrote in error when in the stanzas on the death of the Princess Charlotte he sang, "Peasants bring forth in safety." This lady had studied in Cambridge for three years, and the principal of ——— Hall writes

* The fact that the afterbirth was removed at this time is confirmed by the evidence of the assistant and the nurse. The nurse speaks to unusual losses and clots of blood.

of her many distinctions in the University examinations.* All was dashed to the earth in three hours. It is impossible to estimate the value of such a life so precious to her parents, husband, friends by whom she was beloved, and to her child, "the darling." But she had just been appointed Principal to a new Training College for Teachers at a rising salary of 300*l.* a year, and the value of that can be calculated. It was not less than 2,900*l.*; that sum might have been claimed from the directors of a railway company for such a life lost by the accidental negligence of one of their servants.

What the economic value is of all the women's lives lost annually by uninstructed midwives, or unskilful surgeons it is impossible to calculate, without investigating the facts of each case. It must be large. This is one example.

The new Medical Bill, clause 24., prescribes a special examination in midwifery for women. And some suggestions which that admirable institution, the Obstetrical Society of London, has offered, have been discussed recently by the Medical Council in conjunction with the clause of the Bill in a tone not offering much encouragement to the promoters of improvement. The Council can do little that is effectual. The conjoint scheme, in which the license to practice will be through a common door, prescribes an examination in midwifery; and will obviate one great default which the Royal College of Surgeons has not yet succeeded in rectifying under its charter.

The number of liveborn children registered in 1876 was 1,155,186 in the United Kingdom; of whom about 173,278 belonged to the middle and upper, and 981,908 to the lower, classes of society. Certain additions should be made for the cases of still-born children. But assuming that 30 per cent. of the mothers registered were attended exclusively by medical men, 687,336 will remain among the lower class to be attended by midwives. In towns a midwife in full practice may attend 100 cases a year, or one every 3 or 4 days on an average; but one case a week (52 in the year) will be a fair average, so at least 10,000 instructed midwives will be required. At the Census of 1871 only 3349 midwives, such as they have been above described, are returned: 31,180 women were returned as nurses.†

It has been wisely decided by the University of London to confer the same medical degree on women after the same examination as men. So it is not now a question of sex. The M.B. or M.D. is proved by examination qualified as far as that goes to practise medicine in its obstetric as well as other branches. But we may accept the practical proposal of the Obstetrical Society to license and register midwives not versed in the full knowledge of medicine, but competent to deal with all the ordinary cases of labor. They could follow their calling at a rate of remuneration which it would be well worth the while of the working man to pay; and in cases of complication call in the help of the experienced physician. The local examination by competent boards might be in the large central or county towns. The register could be conveniently kept, with the Registrar-General's sanction, by the Superintendent Registrars; and the licensed midwives would be authorized to certify the births of the children they bring into the world.

What is wanted besides examinations are good local Schools, founded on the admirable system now in operation in London and Birmingham. The Royal Maternity Charity was founded in 1757, when, under the administration of a great minister, the population of England took a start which has continued up to the present day. This institution does not appeal to the imagination, but its utility, economy, and simplicity commend it to the minds of practical statesmen. The Duke of Wellington became its President in 1818, the year after the Princess Charlotte died, and remained

* Journal of the Women's Education Union, vol. vi. No. 62., 15th February 1878.

† *See* Census Reports, 1871.

its President until the year of his death (1852). He was "a liberal con- "tributor to its funds, and a judicious dispenser of its benefits." The Duke saw its importance; midwifery had given him his Guards. It would have been difficult to get the Duke to preside over some of our sensational societies, but he at once saw that the mothers of workmen and soldiers had claims for skilful help at their homes in the sorrows of labor. It was a plain good thing that appealed to his mind. Who will perfect the work?

Two things are wanted in every great centre; (1) a Society to set midwives to work under an obstetrical practitioner charged with their instruction and guidance; to be followed by (2) a Self-supporting Society among the independent third class, who would thus provide themselves all the skilful help in childbirth their means will enable them to command. The results will amply repay the contributions.

V.—Violent Deaths.

These deaths require vigilant attention. Their causes are evident; and they are to a large extent under human control. They are incidentally due in part to the progress of the mechanic arts and chemical science. They are of five orders; the first order comprises 15,995 deaths by accident or negligence: the other four follow; *none* in England by battle; 412 by homicide; 1770 by suicide; 21 by execution. 181 violent deaths could not be classified under any of these heads, chiefly through incomplete or inexplicit returns.

The rate of mortality by violent causes was 746 in 1850–4, and 762 in 1876.

Suicide usually presents little variation from year to year. In the three quinquenniads (1860–74) the suicides per *million* of population were 66·6; 67·2; and 67·0. The suicides were 1601 in 1875 and 1770 in 1876. The increase in the year was 169; 11 deaths due to gun shot wounds, 20 to poison (in spite of the Acts), 50 to drowning, 63 to hanging, 34 to other causes. Cut, stab, showed a decrease of 9. In the three years 1871–2–3 of prosperity 1495, 1514, 1518 persons committed suicide; in the three following years of adversity, when alcoholism abounded, 1592, 1601, and 1770.

The violent deaths of the first order are largely due to the mines and the railways. The particulars of each kind of death are analysed in the Tables pp. 198–221, in the hope that by pointing out the dangers to life their fatality may be diminished.

It has long been a popular notion that the East wind is noxious, and has something in it especially prejudicial to health. It has been difficult to prove it directly, as this cause is mixed up with the influence of cold and other agencies, but Mr. F. J. Williams has examined this closely, and has advanced facts in the following paper to prove that the east wind in Spring is the enemy it was suspected to be. He has also thrown new light on the causes of death among infants.

I have the honour to be,
Sir,
Your very obedient servant,

To WILLIAM FARR.
The Registrar General.

Effect of Atmospheric Vicissitudes on the Mortality.

The difference in the mean temperature of the two years 1875 and 1876 was comparatively slight (49°·2 in 1875, and 50°·1 in 1876), and great alternations occurred in the winters of both years, but the long continuance of east winds in the severe winter of 1875 rendered it unusually trying, and caused an excessively high rate of mortality from pulmonary diseases.

During the three months of February, March, and April of the year 1875, the wind was in the east for 32 days. In the winter of 1876 the weather was cold, and there were heavy falls of snow, but east winds prevailed during these three months for only 13 days. The chief cause, therefore, of the reduction in the death-rates of children and elderly people in 1876 was, probably, the comparative immunity from bitter east winds in the winter and spring.

Table A.—ENGLAND. Death-rates per 1000 of Population at different Ages.

Age.	1875.	1876.	Reduction in 1876.
All Ages - -	22·8	21·0	1·8
Under 5 - -	66·9	63·0	3·9
5— - -	6·7	6·2	0·5
10— - -	3·8	3·6	0·2
15— - -	5·7	5·4	0·3
20— -	7·5	7·1	0·4
25— - -	9·5	8·8	0·7
35— - -	13·7	12·8	0·9
45— - -	18·8	17·2	1·6
55— - -	34·4	31·2	3·2
65— - -	69·4	62·1	7·3
75— - -	153·9	134·3	19·6
85 and upwards -	327·7	277·4	50·3

The effects of such atmospheric phenomena are exhibited in the death-rates at the different ages in 1875 in the above table. The cold, intensified by the biting east wind, had apparently the effect of raising the mortality from diseases of the respiratory organs higher than in any year since the commencement of civil registration.

TABLE B.—ENGLAND. DEATH-RATES per 1000 of POPULATION from DISEASES of the RESPIRATORY ORGANS.

YEARS.	Proportional Numbers.
Mean of 5 Years 1850–54 -	2·769
„ 1855–59 -	3·155
„ 1860–64 -	3·409
„ 1865–69 -	3·418
„ 1870–74 -	3·614
Mean of 25 Years 1850–74 -	3·273
Year 1875 - -	4·354
Year 1876 - -	3·731

The difference in the mortality in the two years, at the different ages, is more accurately measured by the results in the subjoined table.

TABLE C.—ENGLAND. DEATH-RATES at DIFFERENT AGES per 1000 of POPULATION LIVING at **All Ages.**

AGE.	**1875.**	**1876.**	Reduction in Rates in 1876.
ALL AGES - -	22·82	21·05	1·77
Under 5 - -	9·04	8·52	·52
5— - -	·80	·74	·06
10— - -	·41	·39	·02
15— - -	·55	·51	·04
20— - -	·66	·63	·03
25— - -	1·40	1·29	·11
35— - -	1·55	1·45	·10
45— - -	1·66	1·52	·14
55— - -	2·03	1·84	·19
65— - -	2·34	2·09	·25
75— - -	1·84	1·61	·23
85 and upwards -	·54	·46	·08

Thus the death-rate in England and Wales at all ages in 1875 was 22·82 per 1000 of population, in 1876 it was 21·05, so the reduction in the rate in 1876 at all ages was 1·77 per 1000 of population, of which ·52 was at ages under 5 years, ·14 at ages 45 and under 55, ·19 at ages 55 and under 65, ·25 at ages 65 and under 75, and ·23 at ages 75 and under 85.

For England no returns are published showing the number of deaths registered from different causes during each month; but for London this information has been obtained approximatively for certain causes from the weekly returns, and from these results the annual death-rates from *diseases of the respiratory organs* in each month of the years 1875 and 1876, and in the ten years 1865–74, have been deduced. The subjoined

table also shows the meteorological phenomena most directly influencing the mortality from those diseases.

TABLE D.—LONDON. MORTALITY from DISEASES of the RESPIRATORY ORGANS; MEAN TEMPERATURE; and RELATIVE PROPORTIONS of NORTH and EAST WINDS in 1875–76, and in the Ten Years 1865–74.

MONTHS	DEATH-RATE from DISEASES of the RESPIRATORY ORGANS. Annual Deaths to 1000 living.			TEMPERATURE. Mean for the Month.			Lowest by Night.			Mean of all Lowest.			RELATIVE PROPORTIONS of NORTH and EAST WINDS. Number of Days of North Wind.			Number of Days of East Wind.		
	1876	1875	Average in 10 years, 1865–74.	1876	1875	Average in 10 years, 1865–74.	1876	1875	Average in 10 years, 1865–74.	1876	1875	Average in 10 years, 1865–74.	1876	1875	Average in 10 years, 1865–74.	1876	1875	Average in 10 years, 1865–74.

Note.—In calculating the annual death-rate a correction has been made for the difference in the number of days in the several months.

Year 1875.—In reviewing the mortality from this class of diseases in London in connexion with such phenomena, it will be observed that low mean temperature together with a long continuance of east winds preceded the exceptionally high death-rates in the winter and spring months of the year. Thus the month of December 1874 was remarkable for its low mean temperature (33°·2); on some days it was 14° in defect of the average, and on one "painfully cold" day (31st December) it was as much as 16½° in defect. This severe weather left its impress on the death registers, and its effect may be traced in the mortality in that and in the following month of January 1875, when the excessively high death-rate of nearly 9·0 per 1000 was recorded (see col. 2). In February the mean temperature (col. 5) was as much as 5°·7 below the average; in March and April it was also in defect, and the average daily deficiency for the 54 days ending 24th March was over 3°. During this period the wind was almost continuously E., or a compound of E. (col. 17), and the effect of all this is visible in the high death-rates in each of the five months from February to June (col. 2).

Year 1876.—In February the death-rate from diseases of the respiratory organs in London was very high compared with the average in the ten years 1865–74 (cols. 1 and 3), for the mean temperature of the preceding month (col. 4) had fallen below the average. Then in May the influences of low tem-

perature (col. 4) and a long period of north and east wind (cols. 13 and 16) are reflected in the high death-rates (col. 1) in that and in the following month of June, whereas a remarkably low death-rate prevailed in December, for the mean temperature of that and the preceding month had been above the average (col. 4).

Causes of Death of Children under One Year of Age in Large Towns.

The results in the subjoined table show the principal causes of death among infants in fifteen large towns in the three years 1873–5, and in the year 1876. In Birmingham, Leicester, Newcastle-upon-Tyne, Nottingham, Leeds, Sunderland, Manchester, and Sheffield, there was a considerable reduction in the mortality in 1876 compared with the average in the three preceding years.

Table E.—Proportional Number of Deaths of Children under One Year of Age from different Causes in England, in Scotland, and in Fifteen large Towns, 1873–6.*

* The results for the eleven causes in the fifteen large towns are deduced from returns supplied by the Medical Officers of Health. As far as practicable differences in nomenclature have been adjusted.

Proper maternal care is the one great protection to infant life; in some cases destitution sets this aside, but the mothers of England must be looked to, as a body, to assist in the great work of removing the unfavourable conditions which are so prejudicial to the development of infant life. Sanitary measures alone will not reduce the regrettable high mortality of infants: at this tender age the health officer can do comparatively but little; it is the mothers who are responsible, and until they are alive to their responsibility and to the importance of their duty, it is feared that much of the great sacrifice of infant life which has occurred in the past will continue in the future.

In the last Report attention was drawn to the great disparity between the proportional number of deaths of infants in England and Scotland from convulsions and diarrhœa; the low proportion in Scotland being chiefly attributed by Dr. Stark to better feeding and nursing.

If, therefore, a comparatively low proportional number of deaths of infants from these two causes may be taken as an indication of good feeding and nursing, then of fifteen large towns it would appear, according to the results in the subjoined table, that infant life was most carefully nurtured and cherished in London.

Dr. Russell, the Medical Officer of Health for the City of Glasgow, has favoured the Registrar General with a return showing the number of deaths of infants in that City from different causes in the four years 1873–76.

TABLE G.—NUMBER of DEATHS of CHILDREN under ONE YEAR of AGE, and the PROPORTIONAL NUMBER to every 1000 BIRTHS ANNUALLY in the FOUR YEARS 1873–76, in the CITY of GLASGOW and in LIVERPOOL, from DIFFERENT CAUSES.

CAUSES OF DEATH.	DEATHS of CHILDREN under One Year of Age annually in the Four Years 1873-76.			
	GLASGOW. Estimated Population in 1876, 545,144.		**LIVERPOOL.** Estimated Population in 1876, 521,544.	
	Average Annual Deaths in the Four Years 1873-76.	Proportional Number of Deaths to every 1000 Births annually in the Four Years 1873-76.	Average Annual Deaths in the Four Years 1873-76.	Proportional Number of Deaths to every 1000 Births annually in the Four Years 1873-76.

Other Causes - - -	553·2	26·6	546·5	27·7

* Including convulsions, hydrocephalus, cephalitis, brain diseases, and teething.
† Including tabes mesenterica.

In Glasgow convulsions and teething are returned under the head of nervous diseases, together with hydrocephalus, cephalitis, and brain diseases, as Dr. Russell believes "that the medical diagnosis of such diseases is not refined enough to make them separately valuable." For the sake of comparison the causes of death in Liverpool, for these years, have been classified in the same manner, and the results in the above table show the success that has attended the Scottish method of rearing infant life in a large town, for in Glasgow there were 160 deaths of infants from all causes to every 1000 births, whereas in Liverpool the proportional number was 216. This difference is chiefly accounted for under diarrhœal diseases, nervous diseases, and atrophy and debility, the proportional numbers for which were 59·9 in Glasgow, and 112·0 in Liverpool.

NOTE.—For the causes of death in the 5 years 1838-42, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843-46.

* Order 2, comprising Violent Deaths in Battle, is inapplicable to the civil population.

† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the "Criminal Returns," inasmuch as the executions therein recorded in each year are classed according to the *dates of conviction*, while the numbers in this Table are placed under the years in which the deaths are *registered*.

in each of the **28 Years 1849-1876.**

	ORDER 5. (EXECUTION.) †														
	1 Hanging										9	7	10	11	17
	Violent Deaths (not classed)	12,445	13,128	12,659	13,520	13,729	14,040	14,125	13,960	13,917	—	—	32	120	137
	Sudden Deaths (Cause unascertained)	3,555	3,560	3,458	3,591	4,018	3,993	4,139	3,474	3,403	3,096	2,821	2,894	2,697	2,778
	Causes not specified or ill-defined	10,248	9,776	9,070	9,187	9,327	8,267	8,205	7,204	6,936	5,638	5,484	5,767	5,057	4,788

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note on page 258.

	CAUSES NOT SPECIFIED NOR DISTRIBUTED.	‡60·8	214·8	89·2	—	—	—	—	—

* The rates given in this Table for the various groups of years are the means of the *calculated rates in the several years*. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1863 these have been distributed ratably over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, *is omitted, as inapplicable to the civil population.*

‡ Average in 10 years.

TABLE 4.* (*continued.*) **Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **25 Years 1850-74,** and in each **Quinquenniad** of that Period; also the **Rate** of **Mortality** in the Years **1875** and **1876.**

* The populations of these counties have been estimated to the middle of 1876 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1876. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

III.-9	DISEASES OF THE DIGESTIVE SYSTEM.			
	1. Diseases of the Lips	6	5	1
	2. ,, ,, Mouth	1629	843	786
	4. Diseases, Malformations, & Injuries of the Teeth, Gums, and Alveoli	4886	2694	2192
	12. Diseases of the Tongue	8	6	2
	13. ,, ,, Fauces and Palate	418	214	204
	14. ,, ,, Pharynx	29	22	7
	16. ,, ,, Œsophagus	4	2	2
	17. ,, ,, Stomach	3468	1615	1853
	18. ,, ,, Intestines	30379	15742	14637
	19. ,, ,, Rectum and Anus	224	106	118
	20. ,, ,, Liver	10201	5225	4976
	21. ,, ,, Hepatic Ducts and Gall Bladder	108	26	82
	22. ,, ,, Pancreas	9	7	2
	23. ,, ,, Spleen	96	54	42
	24. ,, ,, Peritoneum	2594	1027	1567
III.-10	DISEASES OF THE URINARY SYSTEM.			
	1. Diseases of the Kidney	7094	4168	2926
	2. ,, ,, Bladder	1204	1021	183
	3. ,, ,, Prostate Gland	589	589	-
	4. Gonorrhœa and its complications	1	1	-
	5. Diseases of the Urethra	299	296	3
III.-11	DISEASES OF THE GENERATIVE SYSTEM.			
	Male Organs of Generation.			
	3. Diseases of the Cord	-	-	-
	4. ,, ,, Tunica Vaginalis	5	5	-
	5. ,, ,, Testicle	1	1	-
	6. Other Diseases (Uterus)	21	21	-
	Female Organs of Generation in the Unimpregnated State.			
	1. Diseases of the Ovary	327	-	327
	3. ,, ,, Broad Ligament	-	-	-
	4. ,, ,, Uterus	787	-	787
	7. Functional Diseases	97	-	97
	Affections connected with Pregnancy.			
	13. Disorders of the Generative System	147	-	147
	14. Affections connected with Parturition	407	-	407
	15. ,, consequent on Parturition	1746	-	1746
III.-12	DISEASES OF THE FEMALE BREAST.			
	1. Diseases of the Female Breast	5	-	5

TABLE 26. (*continued.*)—**Deaths** by different **Diseases** in **England** in **1876,** CLASSIFIED according to the Nomenclature drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS OF LONDON.

No.	NAME.	Persons.	Males.	Females.
III.-14	DISEASES OF THE ORGANS OF LOCOMOTION.			
	1. Diseases of the Bones	527	308	219
	2. " " Joints	1591	896	695
	3. " " Spine	308	209	159
III.-15	DISEASES OF THE CELLULAR TISSUE.			
	1. Diseases of the Cellular Tissue	314	182	132
III.-16	DISEASES OF THE CUTANEOUS SYSTEM.			
	1. Cutaneous System	2600	1394	1206
	2. Parasitic Diseases of the Skin	9	7	2
I.	GENERAL DISEASES A.			
	1. Small-pox	2408	1305	1103
	2. Cow-pox	21	11	10
	3. Chicken-pox	149	84	65
	4. Measles	9971	5104	4867
	5. Scarlet Fever	16883	8616	8277
	7. Typhus Fever	1165	614	551
	8. Cerebro-spinal Fever *	27	11	16
	9. Enteric Fever	7550	3728	3822
	10. Relapsing Fever	30	17	13
	11. Simple Continued Fever	1974	992	982
	13. Yellow Fever	-	-	-

	43. Syphilis: *c.* Hereditary "			
	44. Cancer	11411	3664	7747
	44. Cancer: *b.* Medullary Cancer	37	15	22
	44. Cancer: *c* Epithelial Cancer	13	13	-
	44. Cancer: *d.* Melanotic Cancer	31	16	15
	46. Lupus	83	35	48
	47. Rodent Ulcer			
	49. Scrofula with Tubercular Meningitis	2698	1442	1256
	" Phthisis Pulmonalis	49795	25127	24668
	" Hæmoptysis	1043	1193	650
	" Tabes Mesenterica	7451	3957	3494
	" Tubercular Peritonitis	318	142	176
	50. Rickets	254	139	115
	51. Cretinism	1	1	-
	52. Diabetes	910	582	328
	53. Purpura	300	144	156
	54. Scurvy			
	55. Anæmia	557	240	317
	56. Chlorosis	19	-	19
	57. General Dropsy	2921	1257	1664
III.-1	DISEASES OF THE NERVOUS SYSTEM.			
	1. *Diseases of the Brain and its Membranes.*			
	Diseases of the Brain	3173	1773	1400
	60. Meningitis (Cephalitis)	6275	3491	2784
	61. Inflammation of the Brain, with Red and Yellow Softening	2893	1722	1171
	65. Apoplexy	13215	6527	6688
	67. Chronic Hydrocephalus	7746	4379	3367

No.	NAME.	Persons.	Males.	Females.
III.-1 —*cont.*	DISEASES OF THE NERVOUS SYSTEM—*continued.*			
	2. *Diseases of the Spinal Cord and its Membranes.*			
	75. Inflammation (Myelitis)	495	266	229
	77. Tabes Dorsalis	2	2	-
	80. Spina Bifida	628	276	352
	Spinal Marrow Disease	169	97	72
	3. *Diseases of the Nerves.*			
	84. Paralysis	11890	6051	5839
	4. *Functional Diseases of the Nervous System.*			
	90. Tetanus (Idiopathic)	37	25	12
	91. Hydrophobia	53	45	8
	92. Infantile Convulsions	25408	14390	11018
	93. Epilepsy	2839	1539	1300
	96. Laryngismus Stridulus	647	436	211
	97. Shaking Palsy	104	62	42
	98. Chorea	76	19	57
	99. Hysteria	14	-	14
	100. Catalepsy	3	-	3
	101. Neuralgia	34	13	21
	Sea Sickness	1	1	-
	5. *Disorders of the Intellect.*			
	105. Mania	839	392	447
	106. Melancholia	104	39	65
	Grief	1	1	-
	Fright	9	2	7
	Rage	1	-	1
III.-2	DISEASES OF THE EYE.			
	1. *Diseases of the Conjunctiva.*			
	111. Ophthalmia	33	13	20
	4. *Diseases of the Iris.*			
	136. Iritis	-	-	-
	5. *Diseases of the Choroid and Retina.*			
	146. Amaurosis	1	-	1
	7. *Diseases of the Lens and its Capsule.*			
	152. Cataract	-	-	-
	8. *General Affections of the Eye.*			
	156. Glaucoma	-	-	-
III.-3	DISEASES OF THE EAR.			
	Diseases of the Internal Ear (Otitis)	133	75	58
III.-4	DISEASES OF THE NOSE.			
	213. Epistaxis	41	20	21
	215. Polypus Nasi	29	9	20
III.-5	DISEASES OF THE CIRCULATORY SYSTEM.			
	DISEASES OF THE HEART AND ITS MEMBRANES.			
	1. *Diseases of the Pericardium.*			
	Heart	27519	13115	14404
	219. Pericarditis	397	210	187
	222. Dropsy (Hydropericardium)	111	49	62
	2. *Diseases of the Endocardium.*			
	224. Endocarditis	210	105	105
	3. *Diseases of the Muscular Structure of the Heart.*			
	227. Carditis	64	30	34
	229. Hypertrophy	522	298	224
	241. Cyanosis	782	459	323
	242. Angina Pectoris	397	237	160
	243. Syncope	1617	789	828

* Deaths so returned are classed to typhus.

TABLE 26. (*continued.*)—**Deaths** by different **Diseases** in **England** in **1876**, CLASSIFIED according to the Nomenclature drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS of LONDON.

No.	NAME.	Persons.	Males.	Females.
III.-5 —*cont.*	DISEASES OF THE CIRCULATORY SYSTEM—*continued.*			
	DISEASES OF THE BLOOD VESSELS.			
	1. *Diseases of the Arteries.*			
248.	Occlusion: Embolism	254	94	160
250.	Aneurism	799	618	181
	2. *Diseases of the Veins.*			
260.	Phlebitis	108	51	57
261.	Phlegmasia Dolens	90	-	90
266.	Varicose Veins	42	15	27
III.-6	DISEASES OF THE ABSORBENT SYSTEM.			
	1. *Diseases of the Bronchial Glands.*			
271.	Inflammation of Glands (Adenitis)	21	14	7
III.-7	DISEASES OF DUCTLESS GLANDS.			
	1. *Diseases of the Thyroid Gland.*			
280.	Goitre (Bronchocele)	65	10	55
	3. *Diseases of the Supra Renal Capsules.*			
286.	Addison's Disease	92	43	49
III.-8	DISEASES OF THE RESPIRATORY SYSTEM.			
	1. *Diseases of the Respiratory System not strictly local.*			
288.	Croup	4204	2262	1942
	3. *Diseases of the Larynx.*			
293.	Laryngitis	1224	676	548
296.	Œdema of the Glottis	49	29	20
	4. *Diseases of the Trachea and Bronchi.*			
306.	Bronchitis	54055	27899	26156
314.	Asthma	2351	1395	956
	5. *Diseases of the Lung.*			
315.	Pneumonia	24492	14085	10407
318.	Passive Congestion of Lungs	3643	2029	1614
319.	Pulmonary Extravasation	72	41	31
322.	Emphysema	435	271	164
329.	Grinders' Asthma	3	3	-
	Lung Disease	1736	1032	704
	6. *Diseases of the Pleura.*			
331.	Pleurisy (including Diaphragmitis)	1140	659	481
333.	Empyema	146	100	46
336.	Pneumothorax	37	23	14
III.-9	DISEASES OF THE DIGESTIVE SYSTEM.			
	1. *Diseases of the Lips.*			
347.	Malformations (*a.*) Hare Lip	6	5	1
	2. *Diseases of the Mouth.*			
348.	Stomatitis	275	132	143
350.	Thrush	1242	685	557
353.	Cancrum Oris (Noma)	112	26	86
	4. *Diseases, Malformations, and Injuries of the Teeth, Gums, and Alveoli.*			
365.	Teething	4886	2694	2192
	12. *Diseases of the Tongue.*			
412.	Glossitis	8	6	2
	13. *Diseases of the Fauces and Palate.*			
	Cleft Palate	111	66	45
422.	Quinsy	156	81	75
423.	Tonsillitis			
424.	Sloughing Sore Throat (Cynanche Maligna)	151	67	84

No.	NAME.	Persons.	Males.	Females.
III.-9 —*cont.*	DISEASES OF THE DIGESTIVE SYSTEM—*continued.*			
	14. *Diseases of the Pharynx.*			
431.	Pharyngitis	29	22	7
	16. *Diseases of the Œsophagus.*			
443.	Œsophagitis	4	2	2
	17. *Diseases of the Stomach.*			
449.	Gastritis	1020	460	560
451.	Hæmatemesis	346	198	148
460.	Dyspepsia, with Gastrodynia	279	141	138
462.	Pyrosis	14	5	9
463.	Vomiting	-	-	-
	Stomach Disease, &c.	1809	811	998
	18. *Diseases of the Intestines.*			
464.	Enteritis	2804	1455	1349
466.	Dysentery	636	375	261
467.	Ulceration	1011	466	545
468.	Perforation	227	116	111
471.	Fistula	119	74	45
473.	Melæna	151	80	71
476.	Obstruction	1368	673	695
477.	Stricture (of Intestines)	397	208	189
478.	Intussusception	459	261	198
479.	Internal Strangulation (Ileus)	182	96	86
480.	Hernia, exclusive of:	402	237	165
	Umbilical	123	20	103
	Inguinal	173	124	49
	Scrotal	25	25	-
	Congenital	37	31	6
	Femoral	137	19	118
	Operation for Hernia	195	87	108
483.	Parasites (Worms)	162	71	91
484.	Diarrhœa	21781	11334	10447
	19. *Diseases of the Rectum and Anus.*			
489.	Pelvic Abscess	53	-	53
491.	Hæmorrhoids (Piles)	22	12	10
497.	Malformations: Anus Imperforatus	149	94	55
	20. *Diseases of the Liver.*			
501.	Hepatitis	1467	695	772
506.	Cirrhosis	2570	1494	1076
513.	Jaundice	1026	839	787
	Liver Disease, &c.	4538	2197	2341
	21. *Diseases of the Hepatic Ducts and Gall Bladder.*			
520.	Gallstones	108	26	82
	22. *Diseases of the Pancreas.*			
	Pancreas Disease	9	7	2
	23. *Diseases of the Spleen.*			
	Spleen Disease	96	54	42
	24. *Diseases of the Peritoneum.*			
531.	Peritonitis	2071	850	1221
532.	Ascites	523	177	346
III.-10	DISEASES OF THE URINARY SYSTEM.			
	1. *Diseases of the Kidney.*			
538.	Bright's Disease (Nephria)	4109	2343	1757
	Nephritis	985	566	419
553.	Hæmaturia Renalis (including Uræmia)	475	334	141
554.	Suppression of Urine (Ischuria)	140	92	48
555.	Diuresis	8	6	2
	Diseases of Kidney	1385	836	549
	Dysuria	1	1	-
	2. *Diseases of the Bladder.*			
557.	Cystitis(including Catarrh of Bladder)	620	507	113
570.	Calculus (Stone)	192	162	30
576.	Incontinence of Urine (Enuresis)	-	-	-
	Gravel	3	3	-
	Operation for Stone	47	44	3
	Diseases of the Bladder	342	305	37

TABLE **26.** (*continued.*)—**Deaths** by different **Diseases** in **England** in **1876,** CLASSIFIED according to the Nomenclature drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS of LONDON.

No.	NAME.	Persons.	Males.	Females.
III.–10 –*cont.*	DISEASES OF THE URINARY SYSTEM—*continued.*			
	3. Diseases of the Prostate Gland.			
	Prostatic Disease	589	589	–
	4. Gonorrhœa and its Complications.			
585.	Gonorrhœa	1	1	–
587.	Phimosis	–	–	–
588.	Paraphimosis	–	–	–
	5. Diseases of the Urethra.			
596.	Stricture of Urethra	280	280	–
598.	Urinary Abscess (of Perineum)	19	16	3
III.–11	DISEASES OF THE GENERATIVE SYSTEM.			
	DISEASES OF THE MALE ORGANS OF GENERATION.			
	3. Diseases of the Cord.			
613.	Varicocele	–	–	–
	4. Diseases of the Tunica Vaginalis.			
617.	Hydrocele	5	5	–
618.	Hæmatocele	–	–	–
	5. Diseases of the Testicle.			
620.	Orchitis	1	1	–
628.	Spermatorrhœa	–	–	–
	6. Other Diseases.			
	Uterus Disease	21	21	–
	DISEASES OF THE FEMALE ORGANS OF GENERATION IN THE UNIMPREGNATED STATE.			
	1. Diseases of the Ovary.			
637.	Encysted Dropsy	327	–	327
	3. Diseases of the Broad Ligament.			
653.	Hæmatocele (operation for)	–	–	–
	4. Diseases of the Uterus including the Cervix.			
655.	Inflammation of Uterus	48	–	48
	Uterus Disease	739	–	739
	7. Functional Diseases of the Female Organs of Generation.			
693.	Dysmenorrhœa (Paramenia)	30	–	30
694.	Menorrhagia	67	–	67
	AFFECTIONS CONNECTED WITH PREGNANCY.			
	13. Disorders of the Generative System.			
703.	Abortion	75	–	75
704.	Premature Labour	64	–	64
705.	Extra-uterine Gestation	8	–	8
	14. Affections connected with Parturition.			
708.	Mechanical obstacle to the action of the Uterus, viz., Distorted or Contracted Pelvis	28	–	28
709.	Hæmorrhage from Placenta Prævia	282	–	282
710.	Rupture or Laceration of the Uterus	29	–	29
713.	" " " Perineum	1	–	1
714.	Retention of the Placenta	67	–	67
	15. Affections consequent on Parturition.			
717.	Post-partum Hæmorrhage	569	–	569
726.	Puerperal Mania	132	–	132
727.	Puerperal Convulsions	387	–	387
	Childbirth	658	–	658

No.	NAME.	Persons.	Males.	Females.
III.–12	DISEASES OF THE FEMALE BREAST.			
730.	Abscess of Breast	5	–	5
III.–14	DISEASES OF THE ORGANS OF LOCOMOTION.			
	1. Diseases of Bones.			
755.	Ostitis	6	4	2
	a. Periostitis	23	17	6
759.	Caries	332	181	151
760.	Necrosis	157	103	54
761.	Mollities Ossium	5	1	4
765.	Non-malignant Tumours: *a.* Exostosis	4	2	2
	2. Diseases of Joints.			
768.	Acute Synovitis (Arthritis)	80	47	42
769.	Chronic Synovitis			
771.	Abscess (White Swelling)	2	–	2
	Diseases of the Joints	1500	849	651
	3. Diseases of the Spine.			
785.	Psoas, Lumbar, and other Abscesses	368	209	159
III.–15	DISEASES OF THE CELLULAR TISSUE.			
818.	Inflammation: Phlegmon	314	182	132
III.–16	DISEASES OF THE CUTANEOUS SYSTEM.			
	1. Cutaneous System.			
827.	Erythema	39	19	20
830.	Urticaria	1	1	–
835.	Lichen	–	–	–
838.	Psoriasis	27	16	11
	Lepra	2	2	–
840.	Miliaria	1	1	–
841.	Herpes	10	5	5
842.	Pemphigus and Pompholyx	59	31	28
843.	Eczema	263	160	103
844.	Impetigo	23	9	14
845.	Rupia	11	4	7
846.	Ecthyma	7	4	3
848.	Sycosis	–	–	–
850.	Ichthyosis	1	–	1
859.	Ulcer	382	143	239
861.	Boil	8	6	2
862.	Carbuncle	211	146	65
865.	Whitlow	4	–	4
866.	Gangrene (Mortification)	660	387	273
	a. Senile Gangrene	634	368	266
	b. Bedsore	138	37	101
869.	Elephantiasis	23	7	16
	Skin Disease	96	48	48
	2. Parasitic Diseases of the Skin.			
889.	Tinea Porrigo	7	6	1
894.	Scabies	2	1	1
IV.	CONDITIONS NOT NECESSARILY ASSOCIATED WITH GENERAL OR LOCAL DISEASES.			
903.	Premature Birth	11446	6448	4998
904.	Old Age	25461	10870	14591
905.	Debility	27286	14364	12922
V.	POISONS (VEGETABLE).			
938.	Alcohol (Intemperance)	658	411	247
	a. Delirium Tremens	462	406	56

TABLE **26.** (*continued.*)—**Deaths** by different **Diseases** in **England** in **1876,** CLASSIFIED according to the Nomenclature drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS of LONDON.

No.	NAME.	Persons.	Males.	Females.
VI.	INJURIES (INCLUDING OTHER POISONS).			
	GENERAL INJURIES.			
	Accident or Negligence.			
	1. Fractures and Contusions	7280	6015	1265
	2. Gunshot	95	89	6

	Other Violent Deaths (not classed)	181	128	53
	SUDDEN DEATHS, CAUSE UNASCERTAINED	2537	1462	1075
	CAUSES NOT SPECIFIED	1958	1053	905
	Abscess, Tumour	386	204	182

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 297) *and "Index of certain Towns"* (page 307).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstoke, 88.
Amersham, 139.
Amesbury, 253.
Ampthill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Aston, 388.
Atcham (Shrewsbury) 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

B

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-in-Furness, 481*a*.
Barrow-upon-Soar, 409.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.
Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.
Berkhampstead, 138.
Berwick, 562.
Bethnal Green, 15.
Beverley, 518.
Bicester, 150.
Bideford, 287.
Biggleswade, 171.
Billericay, 190.
Billesdon, 403.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.
Bodmin, 294.
Bolton, 462.
Bootle, 573.
Bosmere, 211.
Boston, 418.
Bourn, 415.
Brackley, 155.
Bradfield, 117.
Bradford-on-Avon, 249.
Bradford (Yorkshire), 496.
Braintree, 199.
Bramley, 499.
Brampton, 567.
Brecknock, 604.
Brentford, 125.
Bridge, 55.
Bridgend, 586.
Bridgnorth, 348.
Bridgwater, 307.
Bridlington, 524.
Bridport, 268.
Brighton, 76.
Bristol, 320.
Brixworth, 161.
Bromley, 40.
Bromsgrove, 385.
Bromyard, 341.
Buckingham, 145.
Builth, 603.
Burnley, 472.
Burton-upon-Trent, 368.
Bury, 463.
Bury St. Edmunds, 206.

C

Caistor, 425.
Calne, 245.
Camberwell, 25.
Cambridge, 178.
Camelford, 290.
Canterbury, 56.
Cardiff, 583.
Cardigan, 597.
Carlisle, 569.
Carmarthen, 593.
Carnarvon, 624.
Castle Ward, 555.
Catherington, 102.
Caxton, 176.
Chapel-en-le-Frith, 443.
Chard, 309.
Cheadle, 366.
Chelmsford, 191.
Chelsea, 2.
Cheltenham, 335.
Chepstow, 577.
Chertsey, 30.
Chester, 452.
Chesterfield, 441.
Chester-le-Street, 549.
Chesterton, 177.
Chichester, 83.
Chippenham, 244.
Chipping Norton, 153.
Chipping Sodbury, 322.
Chorley, 475.
Chorlton, 465.
Christchurch, 92.
Church Stretton, 346.
Cirencester, 331.
Cleobury Mortimer, 347.
Clifton, 321.
Clitheroe, 473.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring to the "*Abstract of Marriages*," District number 600 (see page 24); and the numbers of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the respective Tables.

Clun, 345.
Clutton, 316.
Cockermouth, 571.
Colchester, 195.
Congleton, 450.
Conway, 626.
Cookham, 120.
Corwen, 619.
Cosford, 204.
Coventry, 393.
Cranbrook, 51.
Crediton, 282.
Crickhowell, 605.
Cricklade, 242.
Croydon, 37.
Cuckfield, 74.

D

Darlington, 540.
Dartford, 41.
Daventry, 160.
Depwade, 230.
Derby, 438.
Devizes, 247.
Dewsbury, 501.
Docking, 235.
Dolgelly, 621.
Doncaster, 510.
Dorchester, 265.
Dorking, 34.
Dover, 63.
Downham, 238.
Driffield, 523.
Droitwich, 384.
Droxford, 101.
Dudley, 375.
Dulverton, 304.
Dunmow, 200.
Durham, 546*a*.
Dursley, 324.

E

Easington, 547.
Easingwold, 527.
East Ashford, 54.
Eastbourne, 69.
East Grinstead, 73.
Easthampstead, 121.

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

Sub-District.	District.	No.
A		
Abbey	Bath	317; 3
Abbey Holme	Wigton	570; 2
Abbots Bromley	Uttoxeter	367; 2
Abbotsbury	Weymouth	264; 4

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P., President of the Local Government Board, &c. &c.

General Register Office, Somerset House, 31st March 1879.

(1877.)

SIR,

THE year 1873 presented a remarkably high marriage-rate which since that year has declined to a low point; and in that has followed the depression of trade according to the law which shows that the prospects of getting a livelihood largely regulate marriages in this country. The numbers that married in the year 1877 otherwise than by the rites of the Established Church were large; they amounted to 51,956 or to 27 per cent. The greatest increase has been observed since 1851 when the proportion was only 15 per cent. The proportion of Roman Catholic marriages has since that date remained stationary. The increase has been chiefly among other religious denominations and in the marriages in the Superintendent Registrars' offices. Since the years 1856–60 the proportions of marriages by license have diminished in the Established Church, while those by banns have increased. In the year under review 83 divorced persons were re-married. The tendency to early marriage which has been observed to increase since 1841–5 attained its maximum in 1874, when 23 in 100 females, and 8 in 100 males were under age at the date of marriage. The proportion of men and women who write their names in the marriage register has, I am happy to report, gone on increasing; and in the year 1877 only 15 men and 21 women in 100, signed the register with marks. The men in Scotland are fewer by 6, women by 3; so that comparatively the women are better educated in England than in Scotland. Ireland in the education of both men and women lags sadly behind the other divisions of the United Kingdom. I have to notice still an excess of male births over the births of females; but the disproportion is diminishing; in the ten years 1838–47 there were 105·0 males to 100 females registered, in the ten years 1868–77 the proportion had declined to 103·9 males to 100 females. The birth-rate was 36·2 per 1000; which is above the rate of the last ten years. The proportion of illegitimate children has fallen from 6·4 per cent. in 1855–64 to 4·7 per cent. in the three years 1875–77. The cause of this happy decrease is not obvious on the face of the returns; but I have shown the comparative proportions in every county. The mortality was remarkably low in the year 1877; it was at the rate of 20·4 per 1000. In the country districts the mean mortality was 18·2, in the town districts 22·0. The death-rates in 1847 and 1877 were 29·0 and 22·0 in the town districts; 21·3 and 18·2 in the country districts. Thus the mortality

declined by 7·0 in the town districts, and by 3·1 in the country districts. The death-rate of males in the whole of the country exceeded the death-rate of females; the rates were respectively 21·8 and 19·0. The greatest differences occurred at the ages under 5 and above 65. The mean annual rates of mortality were in the four quarters of the year 22·3, 21·4, 17·7, and 20·2.

There has been a considerable increase in the number of hospitals since 1872 when the number was 450; in 1875 they were 582, and in 1877 the number of hospitals had increased to 644. The number of deaths in each of the three years was 11,638, 12,548, and 12,570; thus there has been no increase of death at all corresponding to the increase of hospitals.

There has been a great decrease in the mortality of the army abroad; the mortality of non-commissioned officers and men was 17·8 in the 16 years 1861–76, against 10·6 in the year 1877. The mortality of officers in the corresponding years was 13·9 and 12·5. The mortality of non-commissioned officers and men at home was 11·0 in the 16 years against 8·3 in 1877. The officers are older than the men and their mortality is higher in 1877 than the mortality of men. The mortality of the navy was 7·1; 6·2 on the Home station, 14·8 in China, and 13·2 in the East Indies.

The deaths by drowning in the Royal Navy were less than one in 1000 in the year 1877. The Merchant Service lost eight times as many in proportion by wreck as Her Majesty's Navy. The mortality by wreck was 7·4, by accident 5·5; making 12·9 in the aggregate. This is slightly below the average 13·4. Some of the deaths on board colonial and fishing vessels are included, whereas the strength on which the mortality is calculated relates only to the registered vessels of the United Kingdom. It is to be regretted that the improvement is so slight after all the agitation that has taken place on the subject.

I have brought together the three divisions of the United Kingdom. The marriage-rate in Scotland was only 14·5, in Ireland was only 9·3; the marriage returns of both countries are evidently defective. The birth-rate in Scotland was 35·6, in Ireland 26·2; this is partly due to the diminished proportion of women in Ireland between the ages 15 and 55; but it is partly due to defective registration. The mortality in Ireland is set down at 17·5. The mortality is low in Ireland, but the difference is probably partly due to defective registration.

Probates and administrations were granted in England and Wales in 44,661 cases in the year; the value of the effects were sworn under 125,547,904*l.* The average value in each case was 2811*l.* against 2779*l.* in the previous year. The proportion of persons of 21 and upwards who left wills, or left estates on which letters of administration were taken out, was 17·0 per cent.

I have shown the number of births to a marriage in ten of the chief states of Europe, from which it appears that the fecundity is 4·92 children to a marriage in Prussia, and 3·42 in France. England occupies an intermediate position, 4·63, but is much nearer Prussia than France.

The meteorology of the year was remarkable by its high winter temperature and its low summer temperature; the winter was exceptionally mild, whereas the summer temperature was below the average. The rainfall was above the average.

I proceed now to discuss the facts in detail, of which I have given the above summary.

Emigration from and Immigration into the United Kingdom. — Mr. Giffen reports a further decline in 1877 in the annual number of emigrants from the United Kingdom.

In the annexed table it will be observed that the total emigration in 1877 was 119,971 against 138,222 in the previous year, showing a decrease of 18,251.

TABLE I.—EMIGRANTS of VARIOUS NATIONALITIES, 1863–1877.

YEARS.	Of British Origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	28,619	6,291	209,801
1866	58,856	12,307	98,890	170,053	26,691	8,138	204,882
1867	55,494	12,866	88,622	156,982	31,198	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	105,293	22,935	74,283	202,511	48,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,490	20,286	60,496	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,347	1,787	173,809
1876	73,396	10,097	25,976	109,469	25,584	3,169	138,222
1877	63,711	8,653	22,831	95,195	21,289	3,487	119,971

The number of emigrants of *British origin*, after adding a certain proportion of 3,487 whose birthplaces were not distinguished was 97,967 against 112,045 in the previous year, showing a decrease of 14,078.

The *total* number of immigrants in 1877 was 81,848, showing a reduction of 11,709, or 12·5 per cent. compared with the number in the previous year. As regards immigrants of British origin only, the number was 64,060 in 1877, against 72,960 in the previous year, being a reduction of 8,900 or 12·2 per cent.

The excess of emigrants over immigrants of *British origin* in 1877 was, therefore, *33,907* against *39,085* in *1876*.

These figures, it will be borne in mind, only refer to passengers to and from places out of Europe.

Of the 97,967 emigrants of British origin 65,785, or 67 per cent. were English, 8,900 or 9 per cent. were Scottish, and 23,282 or 24 per cent. were Irish, the proportions being the same as in the previous year.

In the number of emigrants of *Irish* origin there was a further decrease of 3,047, or 11·6 per cent. on the comparatively small number in the previous year.

The gradual decrease of emigrants of Irish origin is remarkable; the number who left the United Kingdom, according to these returns, during the fifteen years 1863–77 was 1,148,567; of these 544,869 or 47 per cent. emigrated during the five years 1863–67, 364,726 or 32 per cent. in the five years 1868–72, and 238,972 or 21 per cent. in the five years 1873–77. The number of emigrants of Irish origin in 1877 was 82 per cent. less than that in 1863.

In the emigration return of the Registrar-General of Ireland the number of natives who emigrated from *Ireland* in each of the six years 1872–7 is in excess of the number of emigrants of Irish origin from the *United Kingdom*, published by the Board of Trade. This is probably owing to a certain number crossing over to Great Britain; thus of the 38,503 Irish who left their native soil in 1877, less than one half (18,232) went abroad, for 11,573 came to England and Wales, and 8698 to Scotland. Of 37,587 Irish who emigrated from Ireland in the previous year (1876) 20,800 went to the Colonies or foreign countries, and 16,787 crossed over to Great Britain. No returns of the destination of emigrants from Ireland are published previously to 1876. Since 1871 the Irish have probably migrated in larger numbers from one part of the United Kingdom to another.

TABLE II.—IRISH EMIGRATION.

YEARS.	NUMBER OF EMIGRANTS OF IRISH ORIGIN. From the *United Kingdom*, according to the Returns of the Board of Trade.	From *Ireland only*, according to the Return of the Registrar General of Ireland.	Excess or Defect of numbers in Col. 1. over or under the numbers in Col. 2.

Total in the 15 Years 1863–1877 - -	1,148,567	1,155,654	– 7087

The number of emigrants to Australasia in 1877 was nearly the same as in the previous year, while the numbers to the United States and to British North America in 1877 were still less than the already greatly diminished numbers in the previous year. The emigrants to the several destinations, however, bore nearly the same proportions to the total as in 1876. See Table III.

TABLE III.—SHOWING the AVERAGE ANNUAL NUMBER of EMIGRANTS of BRITISH ORIGIN to each of the under-mentioned PLACES.

PERIOD.	TO UNITED STATES.		TO BRITISH NORTH AMERICA.		TO AUSTRALASIA.		TO ALL OTHER PLACES.		TOTAL.
	Average Annual Number.	Per-centage of Total.	Average Annual Number.	Per-centage of Total.	Average Annual Number.	Per-centage of Total.	Average Annual Number.	Per-centage of Total.	
Three years 1853-55	143,606	62	27,856	12	59,876	26	395	—	231,733
Five years 1856-60	74,956	61	7,968	6	37,136	30	3,437	3	123,497
„ 1861-65	93,208	65	9,548	7	37,268	26	3,535	2	143,559

Year 1876 - -	54,554	50	9,335	9	32,196	29	13,384	12	109,469
„ 1877 - -	45,481	48	7,720	8	30,138	32	11,856	12	95,195

Note.—No correction has been made in the above table for those whose nationality was not distinguished.

The subjoined table shows the number of emigrants and immigrants of British origin. In 1877 the number of emigrants to the United States (45,481) was nearly the same as the number of immigrants therefrom (44,878), the excess of emigrants over immigrants being only 603. To British North America the numbers were—emigrants 7,720, immigrants 5,687, and the excess of emigrants was 2,033. To Australasia the emigrants were 30,138, while the immigrants therefrom were only 4,637, showing an excess of 25,501 emigrants.

TABLE IV.—EXCESS of EMIGRANTS over IMMIGRANTS of BRITISH ORIGIN in 1876 and 1877.

DESTINATION OR COUNTRY OF DEPARTURE.	Emigrants of British Origin.		Immigrants of British Origin.		Excess or defect of Emigrants.	
	1876.	1877.	1876.	1877.	1876.	1877.
United States - - -	54,554	45,481	54,697	44,878	– 143	603
British North America -	9,335	7,720	6,629	5,687	2,706	2,033
Australasia - - -	32,196	30,138	2,579	4,637	29,617	25,501
All other places - -	13,384	11,856	7,499	8,688	5,885	3,168
TOTAL - -	109,469	95,195	71,404	63,890	38,065	31,305

Note.—The numbers in this Table are uncorrected for those whose nationality was not distinguished.

The age, sex, and occupation of emigrants and immigrants, *according to their nationalities*, are published for the first time in 1877. Mr. Giffen directs attention to the large proportion of children emigrating to Australasia compared with the proportion to the United States, which appears to confirm the inference drawn from other features of the returns that emigration for permanent settlement to the United States and to British North America is suspended.

This inference is further confirmed by reference to the occupation returns, which show that while a comparatively large number of agricultural labourers and of female domestic servants emigrated in 1877 to Australasia, a much smaller proportional number of servants, and hardly any agricultural labourers, proceeded to the United States.

Increase of Population.—The natural increase of population in England and Wales in 1877, derived from the excess of births over deaths, was 387,684. The net loss of persons of British origin to the population of the United Kingdom by excess of emigration over immigration was 33,907, about 73 per cent. of which (24,752) probably represents the proportion belonging to England and Wales. This number deducted from the natural increase of population gives 362,932 as the net gain in 1877, which approximates to the increase of population (305,193) during the twelve months, estimated from the actual rate of increase during the thirty years 1841–71.

Meteorology.—There were low barometer readings at the commencement of the year. During the 181 days ending 30th June the readings were below their averages on 105 days, and above on 76 days; from 1st July to 31st December the readings were below their averages on 95 days, and above on 89 days. During the first 56 days of the year 1877 there was an average daily excess of temperature of 6°·1 and the winter of 1876–7 was exceptionally mild; after this there were alternations of temperature until the 23rd March and for 26 days previously to that date there was an average daily deficiency of temperature of 2½°. From then to April

11th there was an average daily excess in the mean temperature of about 3°; afterwards a cold period set in and lasted from 12th April till 2nd June. From 1st to the 6th of May the average deficiency of temperature was as great as 11½°. There was an average daily deficiency of mean temperature of 4° during the 52 days ending 2nd June; after this the weather was somewhat warmer. For the 43 days ending August 12th there was a deficiency in the mean temperature of 1¼°, and the average deficiency for the 40 days ending September 30th was 3°·1; indeed Mr. Glaisher reports that the mean temperature during the month of September was lower than that of any September back to 1803. The temperature of the summer of 1877 was therefore below the average. There were severe gales on the 14th October and on the 11th November; on the latter date the lowest reading of the barometer for the year was recorded. During the remainder of the year the temperature was variable, and from the 13th to the 28th December the alternations were still more frequent. The average daily temperature of the 47 days ending with the latter date was ¾° in excess. The mean temperature of the year at Greenwich was 49°·4 or 0°·9 in excess of the average of 106 years.

The rain-fall in January was excessive, and at Greenwich it measured 4·35 inches; this, reports Mr. Glaisher, is most remarkable since the rain-fall in December of the previous year was excessive. The total fall in the first four months was 4·8 inches above the average. In June and September the quantity was remarkably small, while the fall in November was very large. Rain or snow fell in 185 out of the 365 days, and the total fall in the year was 26·9 inches, or 1·6 inches above the average of the previous 62 years. Snow fell on 71 days in the year.

The total horizontal movement of the air was greater than usual.

Prices.—The country, in 1877, had not recovered from the commercial depression which prevailed in the three years 1874–76. Four years of industrial distress have therefore now been experienced since the period (1871–73) when high wages raised the cost of production so extravagantly high.

For three successive years the harvest has been bad. In 1877 cold and rain in July and rain in August damaged the crops, especially in the north, and the average price of wheat rose from 46*s.* 2*d.* per quarter in 1876, to 56*s.* 9*d.* which, however, considering that it was a period of war in Europe, was comparatively low. But in order to provide food for 33 millions of people (who it is estimated consume between 22 and 23 millions of quarters of wheat annually) the wheat grown in the United Kingdom was supplemented by an import for home consumption* of 12,310,957 quarters of foreign and colonial wheat in 1877 against 10,069,050 quarters in 1876.

The area under wheat in the United Kingdom, including the Isle of Man and the Channel Islands, in 1876 was 3,124,000 acres, being 11 per cent. less than in 1875, and 22 per cent. less than in 1869.

Among the most noteworthy events at home which contributed to the depression in 1877 may be mentioned an unsatisfactory harvest, the prevalence of strikes in most of the great trades, distress in the iron and coal trades; agricultural interests also suffered greatly, the potato and fruit crops failed generally, and the year, like its predecessor, was altogether unfavourable for the farmer; indeed, had there not been a good foreign supply of corn and other imports to compensate for the deficiency of home produce, the distress would have been greatly aggravated.

Much depression was also experienced on the continent, and in the United States, the political conflict in France, the war between Russia and Turkey, and the famine in Southern India contributing more or less to the general state of depression.

---

* A certain quantity of home-grown wheat is exported from the United Kingdom every year, no notice of which is here taken.

The quantity of meat imported in 1876 was 788,973 cwts., showing an increase of 257,065 cwts. over that in 1875. In 1877, the quantity was still greater, viz., 1,277,686 cwts., being 488,713 cwts. in excess of that imported in 1876.

TABLE V.—QUANTITY of MEAT IMPORTED in the Seven Years, 1871–7, exclusive of PORK.

——	1871.	1872.	1873.	1874.	1875.	1876.	1877.
	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.
Beef, Salted or Fresh -	302,079	228,912	260,554	261,721	215,581	413,351	678,505
Meat, „ „ -	42,340	55,354	79,841	119,403	144,954	92,556	130,178
Total - -	344,419	284,266	340,395	381,124	360,535	505,907	808,683
Meat, Preserved otherwise than by salting - - -	254,833	350,729	260,749	265,223	171,373	283,066	469,003
Total Meat -	599,252	634,995	601,144	646,347	531,908	788,973	1,277,686

This largely increased importation of meat has probably had the effect of reducing the recent high price of butchers' meat. The average price per pound of beef by the carcass at the Metropolitan meat market was $6\frac{5}{8}d.$ in 1876; in 1877 it was $6\frac{2}{8}d.$, or 5·7 per cent. less. The average price per pound of mutton was $7\frac{4}{8}d.$ in 1876; in 1877 it was $7d.$, showing a decrease of 6·7 per cent.

Potatoes were very dear in 1877, the mean price for the best quality at the waterside market in Southwark being 146*s.* 0*d.* per ton; only once in the last 26 years has this price been exceeded, viz., in 1873, when they were 159*s.* per ton.

In the importation of animals there is a marked decrease in 1877 compared with the previous year; in oxen and bulls of 20,339, in calves of 13,926, in sheep and lambs of 167,274, and in swine of 23,521. See subjoined table.

TABLE VI.—NUMBERS and VALUE OF ANIMALS IMPORTED in 1875, 1876, and 1877.

ANIMALS.	NUMBERS.			VALUE.		
	1875.	1876.	1877.	1875.	1876.	1877.

Cows - - - -	51,264	58,520	25,404	963,684	1,097,019	444,456
GRAND TOTAL -	1,321,278	1,356,463	1,098,287	7,329,585	7,260,115	6,012,778

NOTE.—The figures in this Table, excepting for Sheep and Lambs, are derived from the Monthly Return of "Trade and Navigation of the United Kingdom," compiled by the Board of Trade, as the "Statistical Abstract" does not distinguish the several kinds of cattle or give the number of Swine.

Pauperism.—The average number of paupers returned on the last day of each week in each of the years 1876 and 1877 was—in-door 137,930 and 146,843—out-door 531,344 and 519,493, showing an increase in the number of in-door paupers relieved, but a decrease in the number of out-door paupers relieved.

MARRIAGES.

From a commercial point of view 1877 was more unfavourable than the previous year, and this fact is represented by a further decrease in the marriage-rate; the number of marriages fell from 201,874 in 1876, to 194,352 in 1877, or the number of persons married to 1000 persons living fell from 16·7 to 15·8; so low a rate has not been observed since 1847, about the the time of the Irish famine.

The marriage-rate (persons married to 1000 persons living) is invariably lower in the agricultural counties than it is in the counties where the population is engaged in mining and manufacturing industries. The rate in 1877 in the chiefly agricultural counties ranged from 10·7 in Hereford, 11·2 in Herts, 11·3 in Cornwall, 11·9 in Cambridge and in Essex, to 13·7 in Dorset, 14·2 in Norfolk, 14·6 in Sussex, 14·6 in Hants, 14·6 in Lincoln, and 15·0 in Devon. The rates in 1877 in the counties where the population is principally engaged in mining and in skilled labour ranged from 15·0 in North Wales, 15·1 in Worcester, 15·4 in Cheshire, and 15·7 in Stafford, to 18·5 in Nottingham, and to 18·7 in the East Riding of York and in Lancaster; in London the rate was 19·0.

In Dorset and Nottingham the rate was slightly in excess of the average, while in Cumberland and North Wales it was considerably above the average, but in nearly all the other counties the rate was below the average of the preceding ten years. The counties of Cambridge, Durham, Northumberland, and Monmouth were conspicuous for a rate much below the average.

Some of the general causes which have contributed to the fluctuation in the number of marriages in England and Wales during the past thirty-nine years are shown in Table 85.

In the ten years in the table (1839–48) preceding the period when the Act relating to free trade came into operation the average price of wheat was high, 58*s.* 7*d.* per quarter, and there were great fluctuations in the marriage rate.

In the first five years of the decade the average price of wheat fell gradually from 70*s.* 8*d.* per quarter in 1839 to 50*s.* 1*d.* per quarter in 1843; but the hopes and prospects of the people were depressed, so the marriage-rate declined from 15·9 in 1839 to 15·2 in 1843. The most noteworthy events of the period were the chartist riots in 1839, and the turn-out of cotton spinners and great general distress in 1842, when the depression reached a crisis and expressed itself in the lowest marriage-rate (14·7) recorded since the commencement of civil registration. Previously to 1842 the country had suffered from four successive bad harvests.

In the second half of the decade (1844–48) the marriage-rate rose, but the potato disease in England and Ireland, and three deficient harvests in 1845, 1846, and 1848, together with a commercial panic, brought the rate down to 15·8 in 1847, the year when 10,000,000*l.* were voted for the relief of the Irish who were suffering from famine. During these ten years just reviewed (1839–48) the quantity of wheat imported into the United Kingdom, and retained for home consumption, never exceeded 12,000,000 cwts.

In the five years 1849–53 the mean marriage-rate was high; it increased from 16·2 in 1849 to 17·5 in 1852, and notwithstanding the very deficient harvest in 1853, the rate rose to 17·9 in that year. This is the highest marriage-rate on record. During this period (1849–53) the duty on corn was reduced to 1*s.* per quarter; gold was discovered in Australia, the great exhibition was opened, and owing to free trade the quantity of foreign wheat imported began to increase; in 1853 it reached 20,913,000 cwts.; the average price of wheat was low, and in 1851 reached a minimum price of 38*s.* 6*d.* per quarter.

The five years 1854-8 witnessed some events of great importance; in 1854 there was an extremely good harvest, but war was declared against Russia, and the year 1857 was memorable for the Indian mutiny and for a great commercial panic; all these events had a depressing effect on the prospects of the community, and the marriage-rate declined from 17·2 in 1854 to 16·5 in 1857 (and notwithstanding a good harvest) to 16·0 in 1858.

In the decade 1859-68 the annual marriage-rate was 16·8. In the first five years of this period, although provisions were cheap, the marriage-rate fell to 16·3 in 1861, and to 16·1 in 1862, when great distress prevailed in the cotton districts of Lancashire, owing to the temporary disruption of the United States; in both these years the harvest was deficient. For the first three years (1864–6) of the second lustre, the marriage-rate was high, and the price of wheat comparatively low, but the effects of the rinderpest which broke out in 1865 and was not stamped out as an epidemic until about the middle of 1867, and the great monetary panic in London in 1866, soon made their impression on the rate, and it fell from 17·5 in 1866 to 16·5 in 1867, and to 16·1 in 1868, the year of the Abyssinian war. The year 1866 was memorable as the commencement of a period of commercial depression which lasted until the end of 1870. From the year 1868, owing to the ravages of the cattle plague, both beef and mutton rose considerably in price. In each of the three years 1865–7 the harvest was deficient.

The next five years, 1869–73, comprised two (1869–70), when trade was dull and the marriage-rate was low. In 1869 the duty on corn ceased, but in this and the following four years the harvest was deficient. In the last three years (1871–3) of this lustre the country revived; the year 1871 witnessed a remarkable rise in prices and in the wages of labor and commerce and manufactures recovered from the languor of the previous five years; but a year or two afterwards a reaction set in, wages were greatly reduced, and these three years of prosperity were followed by four years (1874–77) of commercial difficulties and stagnation in trade. There was an abundant harvest in 1874, but in 1875–7 the harvests were unsatisfactory, trade was depressed, strikes were prevalent, and commercial failures were experienced. All this was expressed in the marriage-rate of the country, which rose from 15·9 in 1869 and 16·1 in 1870 to 16·7 in 1871, 17·5 in 1872, 17·6 in 1873, and fell to 17·1 in 1874, to 16·8 in 1875, to 16·7 in 1876, and to 15·8 in 1877. The marriages in the last ten years experienced nearly as great fluctuations as they did in the decade previously to the introduction of free trade.

The gradual increase in the supply of foreign wheat, a few years after the duty on corn was reduced, is remarkable. Thus the number of cwts. of wheat imported into the United Kingdom to every 100 of population in the five years 1854–8 was 54, whereas in the five years 1859–63 the proportional number was 94.

In the four years 1863–6 when the price of wheat was low, there was a considerable reduction in the quantity imported, but in 1867 when the price rose to 64*s.* 5*d.* per quarter, after two or three deficient harvests, a new impetus was given to the importation of corn, and the foreign supply still further increased; the average number of cwts. imported in the five years 1869-73, to every 100 of population, was 121, and in 1874–7 it was 144.

In 1877 the number of cwts. imported for home consumption was no less than 53,347,482 or 159 cwts. to every 100 of population, an enormous increase compared with the quantity in 1846 (8,592,458 cwts.) immediately before free trade was in operation.

Forms of Marriage.—194,352 marriages were celebrated during the year 1877; 142,396, or 73·3 per cent., according to the rites of the Establishment, and 51,956, or 26·7 per cent., otherwise.

Of the marriages according to the rites of the Established Church 18, or ·01 per cent., were by special license, 16,365, or 11·55 per cent., by license, 121,820, or 85·96 per cent., after banns, and 3,511, or 2·48 per cent., by Superintendent Registrar's certificate.

In my last report I drew attention to the fact that in the English Church for some reason or other opinion has, since 1861, set in favor of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation. The subjoined table shows the proportion of marriages by license, banns, and Superintendent Registrar's certificate at different periods, after correction for imperfect returns. Thus, the number of marriages by license increased from 15 per cent. in 1841–5 to 16 per cent. in 1856–60, and then gradually fell off to 12 per cent. in 1876. The number of marriages after banns declined from 83 per cent. in 1841–5 to 81 per cent. in 1856–60, after which period the number gradually increased, until in 1877 the proportion per cent. reached 86.

TABLE VII.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–77.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS of MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.				
	Total.	Special License.	License.	Banns.	Superintendent Registrar's Certificate.
1841–45 - -	100	·01	15·42	83·28	1·29
1846–50 - -	100	·01	15·47	82·39	2·13
1851–55 - -	100	·01	15·58	81·53	2·88
1856–60 - -	100	·01	16·01	80·88	3·10
1861–65 - -	100	·01	14·93	81·94	3·12
1866–70 - -	100	·01	13·56	83·43	3·00
1871–75 - -	100	·01	11·58	85·71	2·70
Year 1876 - -	100	·02	11·89	85·59	2·50
„ 1877 - -	100	·01	11·55	85·96	2·48

In 682 instances,* or ·48 per cent., in 1877 the clergy omitted to state under which of the foregoing heads the marriages should be recorded: this is a comparatively large number, and only 16 fewer than the previous year, so that although the number of such imperfect returns has gradually decreased in previous years there was no improvement in 1877, as will be seen by the subjoined results, showing to every 1000 marriages according to the rites of the Established Church the number of cases in which the words "by license," "by banns," or "by Superintendent Registrar's certificate" were omitted in the years 1841–77:—

Years.	Mean Annual Number.
In the five years 1841–45 - -	159
„ „ 1846–50 - - -	122
„ „ 1851–55 - - -	41
„ „ 1856–60 - - -	29
„ „ 1861–65 - - -	25
„ „ 1866–70 - - -	20
„ „ 1871–75 - - -	7
Year 1876 - - -	5
„ 1877 - - - - -	5

* These 682 cases have been proportionally distributed over the foregoing headings.

Although the proportional number of cases was nearly the same in each of the years 1876 and 1877 the results in the annexed table show that the proportions varied considerably in the different Registration Divisions in the two years.

TABLE VIII.—To every 1000 MARRIAGES according to the RITES of the ESTABLISHED CHURCH in each of the 11 REGISTRATION DIVISIONS the NUMBER of INSTANCES in which the CLERGY omitted to state whether the MARRIAGE was by LICENSE, by BANNS, or by SUPERINTENDENT REGISTRAR'S CERTIFICATE.

York - - - - -	3·38	3·00
Northern Counties - -	3·71	3·63
Wales - - - -	7·59	5·70

Of the 51,956 marriages not according to the rites of the Establishment, 8,277, or 15·93 per cent., were solemnized in the registered places of Roman Catholics, and 21,905, or 42·16 per cent., in the registered places of other Christian denominations, and 21,269, or 40·94 per cent., took place in the offices of Superintendent Registrars without any religious rite. Seventy-eight, or ·15 per cent., were celebrated according to Quaker rites, and 427, or ·82 per cent., were marriages of Jews.

First Marriages; Re-marriages.—The number of men who married in 1877 was 194,352; of these, 167,443 were bachelors, and 26,909 were widowers; 158,798 of the bachelors married spinsters; and 8645 bachelors married widows. Of the 26,909 widowers who re-married 16,238 wedded spinsters, and 10,671 wedded widows.

Of the same number of women who married, 175,036 were spinsters, and 19,316 were widows; 158,798 of the spinsters were wedded to bachelors, and 16,238 to widowers. Of the widows, 10,671 were re-married to widowers, and 8645 tc bachelors. The *number of persons* who re-married in 1877 was 46,225.

The number of marriages of divorced persons in 1877 was 82, or 8 fewer than in 1876. Of 38 divorced men who re-married, 26 married spinsters, and 11 married widows. Of 45 divorced women who re-married, 30 married bachelors, and 14 married widowers. There was one marriage in which both parties had been divorced.

Ages at Marriage.—It has still to be regretted that in a large proportion of cases the marriage registers are imperfect as to age: thus of the 194,352 couples who married in 1877 the precise ages of both parties were not stated in 41,957 instances, the age column of the marriage register in these cases being filled in by the officiating minister or by

the registrar of marriages with the words "of full age," "minor," or "under age;" such imperfect returns amounted to 21·6 per cent. of the total marriages, a reduction of only 1·2 from the per-centage of the previous year.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table:—

TABLE IX.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1858–77.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8
1867	33·5	1877	21·6

The returns, as to age, continue to be very incomplete in London, the proportional number of cases in which the ages of both parties were not stated in 1877 being 40·4 per cent. In the South Midland, South-western, South-eastern, and Eastern counties the proportions were high. The returns were more complete in the mining and manufacturing counties than in and around London; thus, in Yorkshire the ages of both parties were omitted to be stated in only 8·7 per cent. of the total marriages, in the Northern counties the proportional number was 9·9, in Monmouthshire and Wales 13·9, and in the North-western counties 15·2.

The annexed table shows the proportion of imperfect returns in each of the years 1876 and 1877 in each registration division of England and Wales:—

TABLE X.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1876 and 1877.

GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	
	1876.	1877.		1876.	1877.
Yorkshire - - -	8·0	8·7	Eastern Counties - -	23·0	24·2
Northern Counties - -	11·2	9·9	South Eastern Counties -	27·7	24·8
Monmouthshire and Wales	14·5	13·9	South Western Counties -	26·8	25·3
North Western Counties -	15·7	15·2	South Midland Counties -	28·3	27·1
West Midland Counties -	20·1	17·9	London - - - -	43·9	40·4
North Midland Counties -	21·9	21·5			

If the clergy, especially of London, would endeavour to cause the precise ages to be returned at the time of registering a marriage it would not only enhance the statistical value of these national records, but it would also be in the interest of the parties themselves to return their precise ages, for tracing pedigree, and for other purposes of personal identification.

The mean age at marriage as determined from the 304,790 men and women whose ages were stated in the year 1877, including the re-married, was 27·9 years for men, and 25·8 for women. For 133,110 bachelors it was 25·7 years, and for 138,305 spinsters 24·4 years. The mean age at marriage of 19,285 widowers was 43·0 years, and of 14,090 widows 39·6 years. These mean ages are almost exactly the same as those of ten years ago.

Minors.—A comparison of the number of minors married with the *total marriages* indicates, though less accurately than a comparison of the number of minors married with the number of minors living, the increasing tendency to early marriage. The results in Table 8. of the preliminary tables show that the proportional numbers marrying under 21 years of age gradually increased from 1848 to 1874, after which they began to decline. Thus the proportion of minors to 100 marriages attained its maximum (15·54) in 1874, and probably owing to the depression of trade gradually declined until in 1877 it fell to 15·07. The proportion has increased at a greater rate among men than among women.

The annexed table shows the proportions in periods of five years from 1841.

TABLE XI.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841–77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841–45	4·38	13·33
1846–50	4·48	14·23
1851–55	5·45	17·28
1856–60	5·94	18·65
1861–65	6·55	19·87
1866–70	7·08	20·84
1871–75	8·15	22·22
Year 1876	8·25	21·99
„ 1877	8·11	22·03

The counties which generally show the highest proportions of marriages of minors were enumerated in my 38th Annual Report.

15,758 males and 42,815 females married in 1877 under 21 years of age; therefore to every 100 males married 8·11 were under age, and to every 100 females married 22·03 were under age.

Signature in Marriage Registers.—A fresh impetus has been given to education during the last 25 years, and this will probably account for the decrease in the proportional numbers of men and women who sign the marriage register with marks. Of the 70,237 persons who signed with marks in 1877, 29,707 were men, and 40,530 were women, so the

men were better educated than the women, the proportion to every 100 marriages being 15·3 for men against 16·3 in the previous year, and for women 20·9 against 22·1 in the previous year. Thus the number of both sexes unable to affix their names to the marriage register is still comparatively large, being equal in 1877 to 18·1 per cent.

The results in the subjoined table show the improvement that has taken place during the last thirty-seven years.

TABLE XII.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS, 1841–77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.	
	Men.	Women.	Men.	Women.

Buildings registered for the solemnization of Marriages.—The number of these buildings on the register on the 31st of December 1877 was 8,051 being an increase of 255 during the year, to which number the Presbyterians of all descriptions contributed 10, the Independents 35, the Baptists 44, the Roman Catholics 15, the Unitarians 3, the various sects of Wesleyan Methodists 111, the Calvinistic Methodists 21, the New Jerusalem Church one, and other religious denominations 16, whilst the Countess of Huntingdon's Connexion showed a decrease of one.

Certified Places of Meeting for Religious Worship.—The number of certified places of meeting for religious worship on the register on the 31st of December 1877 was 19,546, being an increase of 482 during the year. The following is a list of the descriptions of the congregations on whose behalf places have been certified. Those printed in italics have been added since the publication of the list in the last Report :—

Working Man's Evangelistic Mission Chapels.

Births.

The number of births registered in 1877 was 888,180 being in excess of the number registered in the previous year. The marriage-rate in the three years 1875–7 was lower than that of the previous three years, and this, to some extent, kept down the birth-rate of 1877, which was nevertheless as high as 36·2 per 1000 of population, a rate somewhat below that of 1876 (36·6), but above the average of the last ten years (35·6).

Compared with the preceding year the only counties in which any increase is observed in the birth-rate in 1877 are Sussex, Suffolk, Devon, Warwick, Rutland, East Riding of York, Cumberland, and the counties of North Wales.

The disparity between the rates in the different counties, owing primarily to difference in the several industries carried on, is remarkable.

If the birth-rate for the whole of England and Wales be taken as a standard, viz. 36·2, there were fourteen counties containing the great centres of the mining and manufacturing industries with high birth-rates, ranging from 37·5 in the counties of South Wales to 43·5 in Durham, and averaging 39·8.

There were as many as thirty counties with birth-rates below this standard, in which the rate averaged 31·5, and ranged from 27·6 in Dorset to 36·1 in Cheshire.

London showed a rate of 36·3, as usual approximating to that of England and Wales.

Sex.—The enumeration of the population of England and Wales at the various Censuses shows that there is an excess of females living over males living, and it is noteworthy that this excess is greater now than it was some years ago.

Table XIV.—Proportional Number of Males living to every 100 Females living (exclusive of the portion of the Army, Navy, and Merchant Seamen abroad).

Census Years.	To 100 Females the Number of Males in England and Wales.
Mean of 1821–31 - -	96·35
„ 1831–41 - -	95·87
„ 1841–51 - -	95·80
„ 1851–61 - -	95·51
„ 1861–71 - -	94·96

Thus to every 100 women living in England and Wales at the Censuses of 1821 and 1831 the mean proportional number of men living was 96·35, but this number fell in 1841 and 1851 to 95·80, and fell still further in 1861 and 1871 to 94·96.

This disparity in the proportion of males and females living is attributable to the higher rate of mortality, and the much greater amount of emigration among males than among females. The emigration returns of 1877 show the relative proportion of the *sexes* of emigrants of *English origin*; when they have been published for a series of years they will throw some light on this interesting point. The number of male emigrants of *English* origin in 1877 was 39,829 and of female 23,882.

More boys than girls are born every year in England and Wales. In 1877 the boys were in the proportion of 103·6 to every 100 girls. The proportions of the sexes are perhaps regulated by some natural law in operation immediately preceding, or at some early stage of, intra-uterine life; probably several other causes also exert their influence, such as the social status and relative ages of the parents at marriage. The excess in the births of males over those of females is believed to be greater among first-born children than it is among those born afterwards.

To whatever influences the relative proportion of the sexes at birth is due, it is well known that an excess in the number of boys born prevails not only in England but among all European races.

Dr. Bertillon and others have collected facts which throw some light on this interesting subject. In the meantime I wish to draw attention to the remarkable fact that this excess in the proportional number of boys born to girls born in England and Wales is less than it was, as will be seen by the subjoined table.

TABLE XV.—PROPORTIONAL NUMBER of MALES BORN to FEMALES BORN.

Years.	Males born to every 100 Females born.

„ „ 1858–67 -	104·4
„ „ 1868–77 -	103·9

Children born out of wedlock.—The births of 42,155 illegitimate children were registered in England in 1877. This number is 561 in excess of that in 1876, and 1342 in excess of the number in 1875, but considerably below that recorded in previous years; thus the average annual proportion per cent. of illegitimate to total births has declined from 6·4 in the ten years 1855–64, to 5·7 in the ten years 1865–74, and to 4·7 in the three years 1875–77. The results in these three years represent the proportional numbers since the operation of the recent Act by which the registration of births was rendered compulsory.

The counties showing the lowest rates in these three years were Middlesex (*extra-metropolitan*) 3·4, Durham 3·8, Surrey (*extra-metropolitan*) 3·9, Monmouth 3·9, Essex 4·0, Warwick 4·0, Kent (*extra-metropolitan*) 4·3, Hants 4·4, Lancaster 4·4, Gloucester 4·5, Hunts 4·5, Somerset 4·5, South Wales 4·5. The rate in London was as low as 3·7. The counties with the highest rates in these three years were:—Nottingham 6·0, Suffolk 6·0, Cornwall 6·1, Bedford 6·5, North Wales 6·7, Hereford 7·1, Westmorland 7·5, Cumberland 8·2, Norfolk 8·2, and Salop 8·3.

As the rate of illegitimacy in the different counties is, as a general rule, influenced by the proportional number of spinsters living at the child-bearing ages, I thought it would be interesting to keep up the subjoined table which appeared for the first time in my last annual report, and by which it will be observed that in the mining and manufacturing counties such as Durham and Stafford, where the proportional number of unmarried women aged 20–40 enumerated in 1871 was low, the rates of illegitimacy were also low, whereas in the counties of Cumberland, Norfolk, and Salop, with high proportional numbers of spinsters, the per-centage of illegitimate children was also high.

TABLE XVI.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES of ENGLAND and WALES in 1855–64, 1865–74, and in 1875–7.

[Counties arranged according to rates prevailing in 1875–7.]

A great reduction in the rate of illegitimacy has taken place during the *last* 16½ years (reckoning from the middle of each of the periods 1855–64 and 1875–7): the reduction per cent. reached 39 in Leicestershire, 35 in Cheshire and Nottinghamshire, 34 in Derbyshire and the North Riding of York, 33 in Essex and Lancashire, 32 in South Wales and Wiltshire, 31 in Berkshire, and 30 in Durham. Indeed, in the whole of England and Wales the fall in the rate in the 16½ years was not less than 27 per cent.

Deaths.

500,496 deaths were registered in the year 1877 out of an estimated population of 24,547,309, so the mortality was at the rate of 20·4 per 1000.

The death-rate of the previous year (1876) was low, 21·0; but the rate in 1877 was remarkably low and only thrice before in 40 years has it fallen below 21·0, viz., in 1845 (20·9), in 1850 (20·8), and in 1856 (20·5).

Measles was epidemic in some parts of the country, and the deaths from whooping-cough were numerous, but those from scarlet fever and fever were below the average number and—probably owing to a cool summer—diarrhœa was also less fatal than usual; London, however, suffered from an epidemic of small-pox.

Mortality increases in some proportion to density of population, so the death-rate in the urban districts of England and Wales is always in excess of that in the rural districts. In the five years 1851–5 (when the average annual rate of mortality was 25·5 in the urban, and 20·1 in the rural districts) this excess was as great as 27 per cent., but in the two years 1876–7 (when the annual rate was 22·4 in the urban, and 18·4 in the rural districts) the excess was only 22 per cent.

The reduction in the death-rates during these 23½ years (reckoning from the middle of each of the above periods 1851–5 and 1876–7) is equal to 12·2 per cent. in the urban, and 8·5 per cent. in the rural districts.

Testing the mortality of town and country populations in these two ways, it will be observed, first, that the difference between their respective rates has been reduced; and, secondly, that this reduction is chiefly due to the improved sanitary condition of the urban districts.

There has also been an improvement in the health of the rural districts, but not to the extent observed in the urban districts, partly, perhaps, because attention has been concentrated more on the town than on the country districts, and partly because the towns were much more unhealthy than the country, and therefore afforded greater scope for sanitary effort; but the results are encouraging, and show how much the health of the community is under the control of skilful sanitation.

Mean of 31 Years 1847–77	22·3	24·7	19·7

Sex and age.—The numbers of males and females who died in the year 1877 were respectively 260,567 and 239,929. The death-rate of males was 21·8 per 1000 males living; that of females 19·0 per 1000 females living. The average rates in the 25 years 1848–72 were 23·5 for males and 21·4 for females. The deaths of males in the year were as 109 to 100 deaths of females; the average of 40 years being 104 to 100. These proportions are derived from the deaths among unequal numbers living of males and females, for there is an excess of females in the population. The deaths in 1877, were there *an equal number of both sexes* living, would be in the proportion of 115 deaths of males to every 100 deaths of females.

A comparison of the death-rates at different ages in 1877 with the rates in the previous year shows that the reduction in the total mortality in 1877 was mainly due to a much lower rate among children. The exceptionally low mortality from zymotic diseases of childhood, especially summer diarrhœa, is remarkable.

TABLE XVIII.—ANNUAL RATE OF MORTALITY per 1000 Living in ENGLAND AND WALES at DIFFERENT AGES in 1848–72, and in 1877.

Compared with the mortality in the 25 years 1848–72 the death-rate in 1877 was less at every period of age among males except at ages 35–65, and less among females at every period except at ages 65–75.

Seasons.—The meteorological phenomena of the first three months of 1877 differed in many respects from the average. The mean temperature of the air (42°·3) was remarkably high being 3°·6 in excess of the average of the preceding 106 years, and Mr. Glaisher reports that there were but six instances during that period of so high a mean temperature in a March quarter. In January it was as much as 6°·2 in excess, in February it was 4°·9 in excess of the average, and in March it was near the average. 135,000 deaths were registered during these three months, and the mortality was at the comparatively low annual rate of 22·3 per 1000 of the estimated population, the average for the corresponding season in the ten years 1867–76 being 24·3. The rain-fall in these three winter months at the Royal Observatory, Greenwich, measured 8·3 inches or 3·3 inches above the average of the preceding 62 years. In January alone rain fell during 23 days and measured as much as 4·35 inches causing extensive inundations.

The weather continued exceptional during the first two months of the *second* quarter. There were considerable alternations of temperature until about the middle of April, when a cold period followed, and the mean

temperature of the month of May was 3°·6 below the average. Sometimes the night temperatures of this month were so low that great damage was done to vegetation. From the 3rd June the weather was warm and the mean temperature of the month was 3°·1 above the average. But these exceptional meteorological conditions did not operate very unfavourably on the public health, for the mortality (21·4) in the second quarter of the year was only slightly above the average (21·1) of the preceding ten years. For the entire quarter the mean temperature (51°·9) and also the rain-fall (5·3 inches) were slightly below their averages. In April the fall of rain was 1·5 inches above, in June 1·3 inches below, the average.

With the exception of the warm temperature from 13th to 21st August the weather in the *third* quarter of the year was cold and ungenial. The mean temperature of the quarter was 58°·5 or 1°·2 below the average of the season in 106 years. The month of September was cold and showed a deficiency of temperature of 3°·7 compared with the average, and the rain-fall of this month was remarkably small. The fall of rain for the entire quarter measured 6·4 inches, being one inch below the average amount observed during the last 62 years. The cool summer temperature caused an exceptionally low mortality from infantile diarrhœa so that the death-rate in the third quarter of the year from all causes was remarkably low (17·7), indeed it is the lowest rate in forty years, excepting in 1860, when the mortality of the corresponding quarter was but 17·2.*

The mean temperature of the air in the last quarter of the year was 45°·0, the average for the previous 106 years being 43°·5. The total rain-fall at Greenwich was 6·9 inches, the average quantity for the preceding 62 years being 7·1 inches. The highest and lowest readings of the barometer in the year, in the neighbourhood of London, occurred during this quarter; the highest was on 20th December 30·517 inches, and the lowest was on 11th November, 28·549 inches, giving a range of 1·968 inches. The weather in the month of October was generally fine, but there was a severe gale on the 14th. November was for the most part cloudy and wet with rapid changes of temperature and atmospheric pressure, but the mean temperature of this month was as high as 45°·5 being 3°·2 in excess of the average of the preceding 106 years. December was foggy and damp, and though almost sunless the mean temperature was 1°·7 above the average. The meteorological conditions of these three months did not, however, appear to affect prejudicially the public health, for the mortality was at the annual rate of 20·2 against an average in the preceding ten years of 21·9.

Locality.—For purposes of immediate local sanitary administration it is necessary to obtain the number and causes of deaths, and afterwards the death-rates of comparatively small areas, such as the registration sub-district, or the urban and rural sanitary district; still, for many purposes of statistical comparison and investigation, the death-rate of the registration county is useful.

In every county of England and Wales the rate of mortality at all ages was lower in 1877 than the average in the ten years 1867–76 except in Rutland and in Monmouth; and as low as or lower than the rate of the preceding year, except in Oxford, Northampton, Cambridge, Suffolk, Wilts, Warwick, Rutland, Durham, Monmouth, and South Wales.

The death-rate of England in the year under review was 20·4 per 1000, and there were thirty-two counties with a lower rate than this ranging from 14·8 in the extra-metropolitan part of Surrey to 20·3 in Derby. The mortality in the other counties ranged from 20·5 in North Wales to 24·8 in Lancaster. In London the rate was 21·9 against 22·3 in the previous year.

---

* For further remarks on the temperature of this summer quarter and its effect on infant mortality from diarrhœa, *see* Quarterly Return, No. 115, 1877, page vii.

Death-rates of Children.

Children under one year of age.—In the year 1877 the proportional number of deaths of infants to births in seventeen of the twenty English towns was lower than in the previous year, but in Bristol, Birmingham, and Plymouth the rates were higher.

The towns are arranged in Table XIX., in the order of their average annual death-rates in the seven years 1870–76; comparing these average death-rates with those in the year 1877, a remarkable improvement is observed. This satisfactory result in each of the twenty towns is chiefly attributable to causes which have already been noticed.

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In England and Wales in 1877 the proportional number of deaths of infants to every 1000 births was 136. In Portsmouth it was 133, in

Sunderland 143, in Sheffield 145, in London and in Wolverhampton it was 146, in Bristol the rate was the same as the average for the twenty towns, 154. The death-rates were highest in 1877, in Leicester 189, Liverpool 188, Nottingham 169, Leeds 165, and Birmingham 163.

Children under 5 years of age.—Any excess or defect in the mortality of children under 5 years of age, above or below the average, indicates a rise or fall in the general death-rate at all ages. The death-rates of children of this age in the large towns in the year 1877 are shown in the subjoined table. The towns are arranged in the order of their average annual death-rate in the four years 1873–6.

TABLE XX.—ESTIMATED POPULATION, DEATHS, and ANNUAL RATE OF MORTALITY, of CHILDREN under FIVE YEARS OF AGE, in TWENTY LARGE TOWNS, 1873–77.

[Arranged according to the average annual rates prevailing in 1873–76.]

* Mean in three years 1874–6.

NOTE.—The deaths of children under five years of age in sixteen of the above towns were supplied by the Medical Officers of Health.

Compared with this average, the decrease in the mortality of children in 1877 in each of the towns, is remarkable, but more especially so in Newcastle-upon-Tyne, Bradford, Leeds, Sheffield, Leicester, and Nottingham.

Among those with the lowest mortality of children in 1877, Portsmouth stands first with a death-rate of 50·9, then follow Brighton 59·0, Norwich 62·4, Sheffield 66·4, Sunderland 66·6, Newcastle-upon-Tyne 66·9. Among the towns with the highest death-rates in 1877, were Liverpool 89·6, Salford 85·2, Birmingham 84·1, and Manchester 83·1, and Glasgow 81·9.

A comparison of columns 3 and 4 in the Table XXI. (where the counties are arranged in the order of the death-rates under 5 years of age) shows how much the death-rate at *all ages* in the several counties is affected by the mortality of children under 5 years. This relation between the death-

rate of children under 5 years of age, and that at all ages, is seen more strikingly in the five groups of counties at the foot of the table.

* By the death-rate in cols. 5 and 6 is meant the proportional number of deaths of children under one year of age to every 1000 births.

There is no doubt that an exceptionally large proportion of children in a population conduces to a high death-rate, inasmuch as the mortality at early ages, even in a community living under comparatively healthy conditions, is much higher than among adults; thus in the five groups of counties the total mortality follows the same order as the proportions of children living to 10,000 at all ages shown in columns 8 and 9.

There is another cause, however, for the high mortality in some counties, especially in those forming the first group, viz., that they contain large towns with dense populations. Thus Lancashire comprises the towns of Liverpool, Manchester, Salford, and Oldham, then follows Monmouthshire comprising Newport. London stands third, then follow Staffordshire comprising Wolverhampton, and Warwickshire comprising Birmingham, then Nottinghamshire including Nottingham, Leicestershire including Leicester, Durham including Sunderland, and the West Riding of York including Bradford, Leeds, and Sheffield.

It will be seen for the whole country, in Table XXII., how the mortality of the population in the aggregate is made up of deaths occurring at different ages; thus, the death-rate at all ages in 1875 was 22·82 per 1000 of population, in 1877 it was 20·39, so the reduction in the rate in 1877 at all ages was 2·43 per 1000 of population, of which 1·03 was at ages under 5 years.

TABLE XXII.—ENGLAND. PROPORTIONAL MORTALITY at DIFFERENT AGES per 1000 of POPULATION living at ALL AGES.

Deaths in Public Institutions in England.—Increased hospital accommodation, especially in large towns, is greatly needed for the treatment of persons suffering from infectious diseases.

The following table shows the number of hospitals of all classes in England and Wales in each of the nine years 1869 to 1877. The number in 1877 was 644.

TABLE XXIII.—NUMBER of DEATHS REGISTERED in HOSPITALS in ENGLAND AND WALES in each of the Nine Years 1869–77.

YEARS.	HOSPITALS.				
	Number of Hospitals.	Increase in the number of Hospitals during the Year.	DEATHS.		
			Persons.	Males.	Females.
1869	241	—	9,747	6377	3370
1870	266	25	10,479	6829	3650

1875	582	38	12,548	8494	4054
1876	611	29	12,354	8148	4206
1877	644	33	12,570	8332	4238

* The large number of deaths recorded in 1871 is owing to the epidemic of small-pox from which the country was suffering in that year. Many temporary hospitals were erected to meet the requirements of persons suffering from this disease.

The number of these institutions has increased from 500 in 1873 to 644 in 1877, but this increase of 144 is mainly attributable to additional accommodation afforded for the sick in cottage hospitals.

The deaths of men in hospitals are about double those of women in each year owing chiefly to men being more exposed in their occupations to accidents and injuries than women.

An enumeration of the patients in hospitals shows that the males are chiefly agricultural and general labourers; seamen; shoemakers; domestic servants; cabmen, coachmen, carmen, carters; carpenters and joiners; coal miners; bricklayers; messengers and errand boys; horse-keepers and grooms; plumbers, &c.; while the female patients are chiefly domestic servants, milliners, dressmakers, and seamstresses; laundresses and washerwomen; charwomen; cotton workers, &c., &c.

The abstracts relating to public institutions show the number of deaths registered in each registration division and county, and in each sub-district, in the year 1877. The total deaths registered in England and Wales were 500,496, out of which number 49,332, or 10 per cent., occurred in 1448 public institutions of England and Wales. Of these 49,332 deaths, 32,096, or 65 per cent., occurred in 721 workhouses, workhouse infirmaries, or workhouse schools, 12,570, or 26 per cent., in 644 hospitals or infirmaries; and 4666, or 9 per cent., in 83 lunatic asylums; so of the total number of persons who died in England in 1877, one out of 10 took place in one or other of 1448 public institutions, one out of 16 occurred in a workhouse, one out of 40 in an hospital, and one out of 107 in a lunatic asylum. Only those deaths registered in workhouses, hospitals, and infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions, and the abstracts of such deaths afford the means of correcting the mortality, which in some districts and sub-districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

Deaths in Public Institutions in London.—A reprint of the table published in my Annual Summary for 1877, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.†

* *See* Introductory note p. 99.

† *See* Preliminary Table, No. 41.

In the fifty-two weeks of that year 14,936 deaths were registered in 172 public institutions. Of every 1000 of these deaths, 611 occurred in fifty-eight workhouses, 4 occurred in twelve prisons, 5 in two military asylums, 289 in thirty-eight general hospitals, 41 in forty-one hospitals for special diseases, 5 in five lying-in hospitals, 14 in four military and naval hospitals, 8 in three hospitals for foreigners, and 23 in nine lunatic asylums.

Progress of Registration.

Names on the Registers, and Searches.—The names of 1,777,380 persons, whose marriages, births, or deaths were recorded in the registers during the year 1877 have been added to the printed alphabetical indexes of this office.

The indexes now comprehend an aggregate number of names amounting to 57,657,729, and extend over a period of 40½ years, viz., from the middle of 1837 to the 31st December 1877.

Table XXIV. exhibits the increase in the annual number of searches, but the figures are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

Table XXIV.—Total and Average Annual Number of Searches, 1845–77.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845–9 -	4,758	952	In the year 1845 -	8·0

„ 1870–4 -	91,458	18,292	„ 1870 -	33·7
In the year 1875 -	25,407	25,407	„ 1875 -	47·0
„ 1876 -	26,762	26,762	„ 1876 -	47·9
„ 1877 -	27,030	27,030	„ 1877 -	46·9

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, or employed as messengers, &c. for post office purposes.

The greatest number of registration certificates issued is of those relating to births, the number issued of deaths is somewhat less than that of births, and the number issued of marriages is considerably less than the number issued either of births or deaths.

The total number of searches in 1877 (including those relating to the non-parochial and other records) was 27,721, and the number of certificates issued was 22,377.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1877 was 4211*l.* 13*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi–ii.

United Kingdom.

At the middle of the year 1877 the population of the United Kingdom was estimated to be about 33,446,930. The marriage-rate (persons married to 1000 of population) was 14·6, and the birth-rate and death-rate were 34·5 and 20·0 respectively.

The estimated population of Ireland was 5,338,906, against 5,321,618 in 1876, showing an estimated increase of 17,288 persons. The subjoined table shows the number of emigrants from Ireland (Natives) in each year from 1851 to 1877.* During the years 1866–7 emigration from this part of the United Kingdom was comparatively small.

Table XXV.—Number of Native Emigrants from Ireland in each Year from 1851 to 1877.

Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.
1851*	152,060	1856	90,781	1861	64,292	1866	99,467	1871	71,240	1876	37,587
1852	190,322	1857	95,081	1862	70,117	1867	80,624	1872	78,102	1877	38,503
1853	173,148	1858	64,337	1863	117,229	1868	61,018	1873	90,149		
1854	140,555	1859	80,599	1864	114,169	1869	66,568	1874	73,184	Total 1851–77	2,453,481
1855	91,914	1860	84,621	1865	101,497	1870	74,855	1875	51,462		

* From the 1st of May, the date at which the collection of these returns commenced.

The marriage-rate in Ireland in 1877 was 9·3, but this requires correction for defective registration, owing chiefly to the neglect of the Roman Catholic clergy.† The birth-rate was 26·2, and the death-rate was 17·5.

The estimated population of Scotland at the middle of 1877 was 3,560,715. The marriage-rate was 14·5, the birth-rate 35·6, and the death-rate 20·8.

Owing to a difference between the marriage laws of Scotland and England, the marriage-rate in England is higher than that in Scotland.

The English birth-rate was 36·2 per 1000 of population, the Scottish 35·6, and the Irish 26·2. As the proportion of married women aged 15 and under 55 to the female population at all ages is considerably lower in Ireland than in England, the number of legitimate births in Ireland, assuming the same degree of fecundity to prevail in both countries, must necessarily be less than the number in England.

The English (20·4) and Scottish (20·8) death-rates were nearly the same. The Irish death-rate, owing chiefly to defective registration, was only 17·5, but the mortality in each division of the United Kingdom was remarkably low during the year 1877.

Mortality of the Army.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1877 was 190,502, and the number of deaths was 1801; so the rate of mortality was 9·5 per 1000 of strength, or 1·9 per 1000 below the rate in the preceding year.

---

* *See* Dr. Burke's report on "*Emigration Statistics of Ireland*" for the year 1877.

† *See* Thirteenth Annual Report of the Registrar General of Ireland, p. 29.

The average strength of the Army at home was 101,904, and the deaths were 856: the rate of mortality per 1000 strength was 10·7 among officers, and 8·3 among non-commissioned officers and men, the average annual rates in the 16 years 1861–76 being 10·0 and 11·0 respectively; so the mortality among officers serving at home in 1877 was 0·7 per 1000 above the average, while that of the non-commissioned officers and men serving at home was 2·7 per 1000 below the average.

TABLE XXVI.—ANNUAL RATE of MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861–77.

Annually in the 16 years 1861–76 - - - -	10·0	11·0	13·9	17·8
In the year 1877 - - -	10·7	8·3	12·5	10·6
Excess or defect in 1877 -	+0·7	−2·7	−1·4	−7·2

The average strength of the Army abroad was 88,598, and the deaths were 945. The rate of mortality per 1000 of strength was 12·5 among officers, and 10·6 among non-commissioned officers and men, against an average annual rate in the 16 years 1861–76 of 13·9 and 17·8 respectively. The mortality among officers serving abroad in 1877 was, therefore, 1·4 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 7·2 per 1000 below the average.

Forty per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 46 per cent. abroad.

MORTALITY OF THE NAVY.

Inspector-General T. R. Pickthorn, of the Royal Navy reporting to Sir A. Armstrong, M.D., K.C.B., F.R.S., the Director-General of the Medical Department, states that the sanitary condition of the Navy in the year 1877 was very satisfactory. The total force in the service afloat was 44,940; the deaths were 317, and the mortality per 1000 force was 7·1.

Compared with the mortality in the previous year (when it was exceptionally high, owing to a large number of fatal injuries) there was a reduction in the death-rate from all causes of 2·1 per 1000. The number of deaths in the total force from disease was 221, and from wounds, injuries, and drowning 96. The death-rate from disease alone in 1877 was 4·9, against 6·0 in the previous year; from violence, including drowning, the death-rate in 1877 was 2·1 against 3·2 in the previous year.

Compared with the average of the 14 previous years, there was a decrease in the death-rate of 3·3 per 1000, and in the cases placed on the sick list of 106·3 per 1000. In the ratio of invaliding there was an increase of 1·5 per 1000.

TABLE XXVII.—MORTALITY in the ROYAL NAVY at the different STATIONS during the Years 1875–77.

STATIONS.	DEATHS per 1000 Force. In the Years 1875, 1876, and 1877. From Disease.			From Wounds, Injuries, and Drowning.			Total from All Causes.			Annually in 14 Years. Total from All Causes.

* Including 35 deaths from a boiler explosion in Her Majesty's ship "Thunderer."
† Including the deaths by the loss of Her Majesty's ship "Captain."
‡ Including the deaths by the loss of Her Majesty's ship "Bombay."

Of the 221 deaths from disease, 12 were referred to enteric fever, 12 to remittent fever, 6 to cholera, 46 to consumption, 11 to apoplexy, 15 to heart diseases, 8 to aneurism, 21 to pneumonia, 9 to dysentery, 25 to other diseases of the digestive organs, 8 to kidney diseases, and 4 to delirium tremens. Of the 96 deaths from violence, 45 were caused by wounds and injuries, 2 by burns and scalds, 42 by drowning, and 7 by suicide.

Of 100 deaths from all causes at all ages, forty-three were at ages 15–25, twenty-nine were at ages 25–35, twenty-one were at ages 35–45, and seven were at ages 45 years and upwards.

The mean force employed on the *home* station was 21,000, and the deaths were 130, being in the proportion of 6·2 per 1000, against 9·5 in the previous year, showing a reduction of 3·3 per 1000. The mortality from disease on this station was 4·7 per 1000 force, from violence 1·5 per 1000; against 5·8 and 3·7 in the previous year. The high mortality from violence in 1876, was chiefly owing to a boiler explosion in Her Majesty's Ship "Thunderer," whereby 35 officers and men lost their lives.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88. commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me, and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book kept for the purpose at this office called the Marine Register Book. The numbers recorded in the year 1877 were 354 births and 4338 deaths.

287 births of children and 646 deaths occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of mariners at sea, exclusive of masters, in registered vessels, in the year 1877 was 196,562. The deaths from all causes (including some of those which occurred on board colonial and fishing vessels) were 4181, and the rate of mortality was 21·3 per 1000 of strength. The average annual mortality in the 26 years 1852–77 was 21·4 per 1000.

In the subjoined table the mortality in the merchant service by *drowning* is compared with the mortality in the Royal Navy from the same cause.

TABLE XXVIII.—DEATHS by DROWNING in the MERCHANT SERVICE and in the ROYAL NAVY in the Twelve Years 1866–77.

YEARS.	MERCHANT SERVICE.							ROYAL NAVY.		
	Strength.	Deaths by Drowning.*			Mortality per 1000 Strength.			Strength.	Deaths by Drowning.	Mortality per 1000 Strength.

1874 -	203,606	1819	1040	2859	8·9	5·1	14·0	44,530	78	1·8
1875 -	199,667	1525	987	2512	7·6	5·0	12·6	44,360	41	0·9
1876 -	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2
Average in the 11 Years 1866-76 -	199,025	1621	1051	2672	8·1	5·3	13·4	47,350	109	2·3
1877 -	196,562	1461	1077	2538	7·4	5·5	12·9	44,940	42	0·9

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "*reported*" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

Thus the total number of mariners drowned in 1877 was 2538 or 12·9 per 1000 strength, viz., 7·4 by wreck, and 5·5 by accident.

The average annual rate in the 11 years 1866–76 was 13·4, viz., 8·1 by wreck, and 5·3 by accident.

The number of deaths by drowning in the Royal Navy in the year 1877 was only 42 out of a total strength of 44,940, and the death-rate was 0·9 per 1000; the average annual rate in the 11 years 1866–76 was 2·3 per 1000.

WILLS.*

The number of probates and administrations granted at the Principal Registry during the year ending 31st October 1877 was 17,178. The value of the effects was sworn under 72,650,940*l.*

* See Judicial Statistics, England and Wales, 1877, Part II., pp. 18, 19.

The number of probates and letters of administration granted in the 40 district registries during the year was 27,483. The value of the property under which these probates and administrations were sworn was 52,896,964*l.*

The results for the Principal and District Registries combined were—probates and administrations 44,661—value of effects sworn under 125,547,904*l.* The average value of each was 2811*l.* against 2779*l.* in the previous year. The proportion of the cases in which people dying above the age of 21 left wills, or left estates on which letters of administration were taken, was 1 in 6, or 17·0 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

European States.

Through the courtesy of the superintendents presiding over the statistical departments of the respective European states, I am enabled to publish for the year 1876 some approximative results, showing the comparative fecundity of married women in the different States.

I pointed out in my 27th Annual Report,* that to ascertain the number of births to a marriage (unless the marriage-rate is stationary) the annual births should be divided by the annual marriages of some previous year. In the following results it has been assumed, in the absence of more precise information, that the interval between the mean age of mothers at marriage, and the mean age at the births of their children, is the same in England and in other countries, as it is in Sweden, viz., about six years. The legitimate births in 1876 have therefore been divided by the marriages of six years earlier date. Thus in Sweden the number of legitimate births in the year 1876, to the *average* annual number of marriages in six years earlier date (1869, 1870, 1871) was 4·84, so the number of children to a marriage in Sweden appears to be nearly the same as the number in England, viz., 4·63.

In Italy the proportional number of births to a marriage was apparently highest, 5·15; but this is probably owing to the fact that all the marriages are not at present registered. Prussia stands next in order of greatest fecundity, and the proportional number was 4·92. In the Netherlands it was 4·83, nearly the same as it was in Sweden. In Belgium it was 4·48, nearly the same as it was in Spain; in Denmark it was low (4·24), and in Austria still lower (3·73), while it was lowest in France, viz., 3·42.

Table XXIX.—Comparative Fecundity in different European States.

Years.	European States.	Births to a Marriage.
1876	Italy - -	5·15
„	Prussia - -	4·92
„	Sweden - -	4·84
„	Netherlands -	4·83
„	England - -	4·63
„	Belgium - -	4·48
1870	Spain - -	4·47
1876	Denmark -	4·24
„	Austria - -	3·73
„	France - -	3·42

* p. xx.

The respective rates of marriage, birth, and death in the several European States in the year under review are compared in Table XXX. with those of four previous years (1873–76) as they were undisturbed by any fluctuations from war.

The marriage-rate (persons married to 1000 of population) in 1877 was higher in Denmark, in the German Empire, in Prussia, and in the Netherlands, than it was in England. It was lowest in Austria and Sweden, but it was below the average of the four previous years (1873–6) in each of the seven European States from which returns had been received.

TABLE XXX.—EUROPEAN STATES.

COUNTRIES.	AVERAGE ANNUAL RATES per 1000 POPULATION.

Italy* - - -	15·4	16·0	15·3	37·4	37·0	36·7	30·2	29·9	28·1

* The mean annual rates for Spain are for the ten years 1861–70, those for Italy are for the ten years 1863–72.

NOTE.—The detailed returns relating to the vital statistics in Foreign States will be found in a series of tables on pp. cix–cxv.

In England the marriage-rate was much below the average, but in Austria and the German Empire the depression was still more marked.

Arranging the countries according to their respective birth-rates in 1877, it will be observed that the German Empire has the highest rate; then follow Austria, Italy, the Netherlands, England, Denmark, Sweden, and France. The birth-rate in Austria and in France was lower than the average of the four previous years, but in nearly all the other States the birth-rate in 1877 was near the average.

The death-rate was highest in 1877 in Austria, Italy, and the German Empire, while Sweden and Denmark had the lowest death-rates; indeed lower than the rate in England.

The death-rate in each of the European States in 1877 was below the average of the four previous years. The *average* death-rate in Hungary (45·0) was remarkably high.

This, Sir, is the last Annual Report that I shall have the honour of submitting to you.

It has been my good fortune to preside over this Department since 1842, and in the course of this year I intend to resign my appointment, as I do not wish to take a *fourth* Census.

In 1842 Civil Registration was in its infancy; it has been my study to prove that the usefulness of that institution, foretold at its commencement, is realised.

Previously to 1838, marriages of Roman Catholics and of Non-conformists could only be solemnised by ministers of the Established Church; during the last 40 years the Public have had the option of being married in Roman Catholic and in Non-conformist chapels, or in register offices without religious ceremony, in addition to parish churches. Upwards of 100,000 persons in each year now avail themselves of this privilege; 60,000 in chapels, 40,000 in register offices.

Previously to 1838, the only documents recognised as attempting to establish the date of birth were the parish registers of *Baptisms* kept by ministers of the Established Church; and they furnished no real proof of the exact age of the infants whose baptisms were recorded; during the last 40 years the actual date of birth has been registered together with full particulars as to parents and locality. About 900,000 of these births are annually recorded.

Previously to 1838, *Burials* only were entered in Parish Registers kept by ministers of the Established Church; during the last 40 years deaths have been recorded in the Civil Register, wherein are stated the place and cause of death, the exact names, occupation, and age of the deceased; more than 500,000 of these deaths are annually registered.

Statutes provide that, if in these Civil Registers any particular be falsely recorded wilfully, severe penalties are incurred—even penal servitude.

These are improvements which must, I think, be universally acknowledged.

It has been my endeavour in Weekly, Quarterly, and Annual Reports to inform the Public what deductions and inferences may be derived from the facts recorded in these registers; and I venture to express a hope that, in promoting the study of sanitary subjects, such reports may have been of some use.

Great provision is made for the safe custody of these Civil Registers accessible to the Public in every Poor Law Union, and safeguards are provided against improper alterations of entries being made in them. Copies of these registers and of marriage registers kept by ministers of the Established Church are transmitted to this office, where annually nearly 2,000,000 of names are indexed in strictly alphabetical order.

About 60,000,000 of these separate entries are here accessible to the Public, who in large numbers apply for certified copies under the seal of this office, nearly 30,000 searches being made in a single year.

Here, Sir, I may perhaps be permitted to acknowledge the great improvement made in the system of civil registration by the Statute 37 & 38 Vict. c. 88., which under your auspices was passed in 1874.

It would ill become me to omit mention of the 7,000 registration officers and deputies by whom this great national work is quietly executed at comparatively small cost.

I have no hesitation in assuring you that they admirably perform their simple but important duties.

Of course in the work of so large a number there must be opportunities for captious critics to have the pleasure of noticing practices not altogether in accordance with official regulations; but I maintain that such opportunities are rare. I should be ungrateful if I did not here record the

gratuitous assistance that I have during a long series of years received from registration officers in furnishing me periodically and with marvellous punctuality returns enabling me to issue to the public my Weekly and Quarterly Reports—returns for which they receive no remuneration.

Under this roof I leave for my successor an admirable staff of most efficient civil servants, who have been engaged in assisting me to take three Censuses, and who from their long experience thoroughly understand the duties assigned to them, and execute those duties with an intelligence, assiduity, and regularity I cannot praise too highly.

Lastly, I must express to Dr. Farr, whom in 1842 I had the good fortune to find here presiding over the Statistical Branch, my grateful acknowledgment of the important services he has ever since continually rendered.

He is acknowledged throughout Europe, the United States, East Indies, and the Colonies as one of the first statists of the day.

To his scientific researches and reports I attribute any reputation that may have accrued to the General Register Office of England and Wales from the time he accepted office in this Department.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

Remarks on the Meteorology of 1877.

By James Glaisher, Esq., F.R.S., &c.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer were very low at the beginning of the year, till January 9th the average daily deficiency of pressure was 0·57 inch; from January 10th to January 19th the pressure was that of its average, the readings being a little in excess for a day or two and a little in defect alternately; from January 20th to February 9th, with the exception of January 25th and January 30th, the pressure was in excess, and for these 21 days the average excess was 0·22 inch; from February 10th to 27th there was an average daily defect of 0·20 inch; then for 4 days there was a daily excess of 0·22 inch; this was followed by a long period of low pressure extending to April 11th, the average daily deficiency for these 39 days was 0·33 inch; till April 20th the mean pressure was that of its average, three days being below and five a little above the average; from April 21st to the end of the month the readings were low, the average daily deficiency was 0·16 inch. The first four days in May the readings were 0·24 inch in excess daily; from the 5th to the 15th the pressure was low, the deficiency being 0·22 daily; they were then high till the 26th, being 0·26 in excess daily; from May 27th to June 9th they averaged 0·32 in defect. A moderately high period set in and continued till the 20th, the mean daily excess for these 16 days was 0·10 inch; three days of low readings followed, the mean defect being 0·22 inch; then eight days of moderately high readings, the average daily excess of pressure was 0·16 inch; to June 30th the readings had been below their averages on 105 days and above on 76 days. For the first few days in July the pressures were nearly those of their averages; from the 7th to the 11th they were in excess of the average to the amount of 0·20 inch daily; from the 12th to the 24th there was a deficiency of pressure daily to the average amount of 0·27 inch; then till August 6th there was a slight excess averaging 0·11 inch daily; from August 7th to September 15th there was a general slight deficiency of pressure, on a few days it was that of its average, and on a few others a little in excess; the average of the 40 days ending September 15th was 0·11 inch in defect of the average. This was followed by nearly as long a period of a general excess of pressure. For the 36 days ending October 21st there was a mean daily excess of 0·25 inch of pressure; this was succeeded by nine days of low barometer readings, the mean defect being 0·18 inch daily; then three days of excess, whose average was 0·27 inch: this was followed by low readings for 10 days, the defect of pressure from November 4th to 13th was 0·42 inch daily; five days of high readings followed, the excess being 0·33 inch daily. From November 19th to December 1st, the readings were continually low and the average deficiency of these 13 days was 0·43 inch; from December 2nd to December 23rd, with the exception of the 6th, 7th, 12th, and 13th, the barometer readings were high, particularly on the 19th and 20th, the average daily excess of pressure was 0·21, and from December 24th to the end of the year the average daily defect was 0·36 inch. From July 1st to December 31st the readings had been below their averages on 95 days and above on 89 days. In the year the three days of greatest departure below their averages were January 1st 1·043 inch, March 25th 0·941 inch, and November 19th 0·964 inch; and the three days of greatest departure above their averages were January 21st 0·720 inch, October 6th 0·775 inch, and December 20th 0·635 inch.

The highest reading of the barometer in the year at the height of 160 feet above the level of the sea was 30·517 inches on the 20th of December, and the lowest was 28·549 inches on the 11th of November; the yearly range was 1·968 inches. The mean monthly range of the barometer varied from 1·1 inch at extreme southern stations to 1·3 inch at extreme northern stations.

Temperature.—The weather was warm from the 1st of January till the 19th of February, the average excess of temperature for these 50 days was 6°·1, causing the winter of 1876-7 to be exceptionally mild. On February 20th a period set in which was distinguished by several days of temperature below their averages, and then followed by a smaller number of days of temperature above their averages; and this variation of temperature, alternately warm and cold, continued till March 23rd; the average daily deficiency of temperature for the 26 days ending March 23rd was 2½°. From March 24th to April 11th the weather was warm, and the average daily excess of mean temperature was about 3°. On the 12th of April a cold period set in and lasted until June 2nd; the coldest days in this period were from May 1st to the 6th, and their average deficiency of temperature was as large as 11½°; at many places on these days the highest temperature reached was below 50°, the temperature of the air at night generally varying from 22° to 32° only. The average deficiency of mean temperature for the 52 days ending June 2nd was 4° daily. From the 3rd of June to the end of the month the weather was somewhat warm, and the average excess of temperature was 2½°. The weather from the 1st of July till the 12th of August was for the most part cold and ungenial; on the 13th a somewhat warm period set in, but only lasted till the 21st; the mean excess of daily temperature for this period was 4¼°. For the 43 days ending August 12th the deficiency of temperature was 1¼°. From the 22nd of August until the end of September the weather was almost continuously cold, and at times painfully so, particularly from the 15th to the 25th of September, when the wind was constantly blowing from the north. The average deficiency of temperature for the 40 days ending September 30th was 3°·1, and the mean temperature of the month of September proved to be *lower* than in any September back to 1803, or a period of 74 years. The month of October opened fine and dry, with a low temperature; on the 14th there was a severe gale, causing great destruction of property all over the country. Till the 19th of October the weather was cold, and the deficiency of temperature for the 19 days was 4¼°. From October 20th to November 4th the weather was mostly warm, but it was occasionally cold; upon the average of these 15 days there was an excess of 2¼°. On November 5th a considerable increase of warmth took place, and continued till the gale of the 11th day (and on which day the lowest reading of the barometer in the year took place), the average daily excess for these seven days was 7¼°; on the 12th, immediately following the gale, a considerable depression of temperature took place, and from this day until the 28th of December the changes of temperature from warm to cold and vice versâ were frequent, the warm periods being somewhat longer than the cold; the average of the 47 days ending December 28th was ¾° in excess of daily temperature. The year closed with three fine warm days, whose mean temperature was 8¼° in excess of the average. The month of December (with the exception of the last three days) was very dark, and almost sunless.

The highest temperature of the air in the year was 87°·5 at Salisbury, and the lowest was 13°·0 at Allenheads.

Rain-fall.—The fall of rain in January was excessive, and about London it fell on almost every day during the first half of the month; and during the whole month it fell on six days out of seven. The amount measured at Greenwich was 4·35 inches; and we have no instance of so

large a fall in the preceding 62 Januaries. The average fall for January is 1·85 inch, so that more than double the average fell in January; this is even more remarkable as the fall in December 1876 (see Annual Report, 1876) was so excessive. At Helston (Cornwall) there were 11 days in January on which more than a ¼ of an inch of rain fell. At Tunbridge (Kent) the total fall of rain in January was 6·38 inches, and there were no less than 27 wet days in the month: through this excessive rain-fall the meadows by the river were under water on no less than nine days. At Cockermouth the fall of rain in January was 8·53 inches, whilst at Holkham the fall in the same month was only 2·50 inches.

The fall of rain in February was 1·7 inch, being 0·2 inch above the average, the fall in March was 2·2 inches, or 0·6 inch above the average, and in April was 3·2 inch or 1·5 inch above the average; the total fall in the four months ending April 30th, was 11·5 inches, being no less than 4·8 inches above the average. The fall of rain in May was 1·4 inch, being 0·7 inch below the average, in June was but 0·7 inch, being 1·3 inch below the average, and in the preceding 62 Junes there are but seven instances of so small a fall of rain as in the year in question. In July the total fall of rain was 2·4 inch, or 0·2 inch below the average; in August it was 2·9 inches, or 0·5 inch above the average; in September it was 1·1 inch, or 1·3 inch below the average; and since 1815 there have been but nine instances when the fall of rain in September was as small as 1·1 inch. The fall in October was 1·7 inch, being 1·1 inch below the average, in November it was 3·4 inches, 1·1 inch above the average, and in the preceding 62 Novembers, there have been but eleven instances of so large a fall of rain in November as 3·4 inches. At Cockermouth the fall of rain in November was 9·86 inches, being higher than at any station; it was the wettest November *there* for 16 years, and the fall has not been equalled in any one month since October 1862, when it was 10·4 inches. On the 11th of November (the day of the great gale) the fall of rain at Guernsey was 1·65 inch, at Weybridge was 1·58 inch, and at Marlborough was 1·65 inch, and on this day scarcely any rain fell either in the Midland or Eastern Counties. The fall of rain in December was 1·8 inch, being 0·2 inch below the average. The total fall in the year was 26·9 inches, being 1·6 inch above the average of the preceding 62 years.

The heaviest total falls of rain in the year were 61·93 inches at Allenheads, 59·94 inches at Stonyhurst, and 59·29 inches at Cockermouth, and the least total falls were 23·85 inches at Cambridge, 25·01 inches at Leicester, and 26·45 inches at Holkham. The greatest number of wet days were 252 at Nottingham, 249 at Eccles, and 246 at Stonyhurst, and the least number of wet days were 173 at Cardington, 176 at Osborne, and 177 at Gloucester.

Wind.—The prevalence of the wind during the year was S. and W.; in every parallel of latitude the ratio of the S. and W. to the N. and E. was as 2 to 1. During the year the horizontal movement of the air was greater than usual; it was 312 miles a day. The general average is 257 miles. The average weekly movement for the year was 2,184 miles; the nearest large values to this were in 1869, 2,043 miles; in 1876, 2,036 miles; in 1868, 2,029 miles; in 1872, 1,998 miles; in 1867, 1,981 miles. The general weekly average is 1,801 miles. The hourly horizontal movement of the air in 1877 was 13·1 miles, exceeding the general average by 2·4 miles per hour.

The greatest number of miles of horizontal movement of the air in one day was 893 miles on January 30th, and the least number was 67 on December 20th.

The total horizontal movement in the year was 113,943 miles.

Thunder storms occurred on 80 different days during the year. The greatest number of days in one month was 10 in April, and the least 3 in February.

At the same stations the total number in 1876 was 70.

Thunder was heard, but lightning was not seen, on 48 days in the year, of which 11 days were in August, and 8 in June, but in January, November, and December *thunder was heard,* but on one day only in each of these months.

The total number from the same stations in 1876 was 71.

Lightning was seen, but thunder was not heard, on 51 days during the year, 11 of which occurred in November, a rather unusual circumstance.

The total number in the year 1876 was 57.

Solar Halos were seen on 80 days in the year, and the number of days was pretty equally distributed in each month.

The number in the year 1876 at the same stations was 85.

Lunar Halos were seen on 65 nights in the year: May, June, July, and September, were generally free from lunar halos.

The number in the year 1876 at the same stations was 60.

Auroræ Boreales were seen on three days only during the year, viz. 1 day in January at Guernsey, and 2 days in December at Torquay.

Snow fell on 71 days in the year; 17 of these were in March, 14 in January, 12 in December, 11 in February, 6 in both March and April, 4 in November, and 1 in October. The falls in January were most severe in the north, and in February, March, and December the falls of snow were pretty general over the country.

In the year 1876 the number of days on which snow fell was 77.

Hail fell on 109 different days during the year. The greatest number of days in any month was 20 in March, and the least 3 in August and September; in June *no* hail fell.

In the year 1876 the number of days on which hail fell was 80.

Fog prevailed on 149 days during the year (being 11 days less than the number recorded in 1876), and they were distributed as follows:—January 19, February 8, March 18, April 14, May 9, June 10, July 5, August 7, September 11, October 17, November 13, and December 18.

PRELIMINARY TABLES.

(1877.)

TABLE 1.—Estimated **Population,** and Number of **Marriages, Births,** and **Deaths** registered in **England,** in each of the Forty Years **1838–77.**

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	338,984	153,590

1877	24,547,309	194,352	388,704	888,200	500,496	387,704

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841–51–61–71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, *see* Table 69.

TABLE 2.—**Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England,** in each of the Forty Years **1838–77.**

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.
1838 - -	15·4	30·3	22·4	65	33	45

1874 - -	17·1	36·2	22·3	59	28	45
1875 - -	16·8	35·5	22·8	60	28	44
1876 - -	16·7	36·6	21·0	60	27	48
1877 - -	15·8	36·2	20·4	63	28	49
Mean in 40 years	16·5	34·1	22·2	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every *10,000 persons living there* were *154* persons married, 303 births, and 224 deaths; the numbers of persons *living to every person married, birth* or death, were 65, 33, and 45 respectively. The rates in this Table *have been calculated upon the estimated* populations given in Table 1, but no corrections have been made *for the difference between the ordinary year* of 365 days and the leap year.

TABLE **3.—Proportions** of **Persons Married,** of **Births** and of **Deaths** to **1000** of the **Population** of **England,** during the Forty Years **1838–77.**

YEARS.	To 1000 Persons living.			The Number of Persons living.		
	Persons Married.	Births.	Deaths.	To one Person Married.	To one Birth.	To one Death.
	MEAN OF 40 YEARS.					
Forty years 1838-1877 -	16·5	34·1	22·2	61	29	45
	MEAN OF 10 YEARS.					
Ten years 1841-1850 -	16·1	32·6	22·4	62	31	45
Ten years 1851-1860 -	16·9	34·1	22·2	59	29	45
Ten years 1861-1870 -	16·6	35·2	22·5	60	28	45
	MEAN OF 5 YEARS.					
Three years 1838-1840 -	15·6	31·3	22·4	64	32	45
Five years 1841-1845 -	15·7	32·4	21·4	64	31	47
Five years 1846-1850 -	16·5	32·8	23·3	61	31	43

Mean Annual Rate per 1000 in each quarter during the 40 years					13·7	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 8.—**Marriages** in **England**. The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers** or **Widows**, in each of the Thirty-seven Years **1841-77.**

Mean Annual Rate per 1000 in each Quarter during the 40 years					35·7	35·3	32·9	32·7

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, *see* note to Table 7.

Table 16.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Forty Years 1838-77.

Years.	Number of Births in the Average Quarter.	Proportional Number of Births.				
		In the Average Quarter (assumed to be 1000).	First Quarter ending March 31.	Second Quarter ending June 30.	Third Quarter ending Sept. 30.	Fourth Quarter ending Dec. 31.
1838	115,947	1000	995	1053	981	971
1839	123,144	1000	1017	1049	967	967

1877 -	11,948,677	12,598,632	20·4	21·8	19·0	109	115
Average proportion in 40 years, 1838-77			22·2	23·3	21·3	104	109

The Table may be read thus:—In the year 1838 to every 1000 males *living* there were 23·4 deaths of *males*; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of equal *numbers living* the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 21.—**Number**, and **Annual Rate** per 1000 Persons living, of **Deaths** in **England** during each **Quarter** of the Forty Years **1838–77.**

Mean Annual Rate per 1000 in the four Quarters of the 40 years					24·8	22·0	20·5	21·8

* *These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see* note to Table 7.

TABLE 22.—**Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter* of each of the Forty Years 1838–77.**

YEARS.	NUMBER OF DEATHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF DEATHS				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Note.—The Table may thus be read:—Of each 1000 male children living under five years of age, 72·0 died in each of the 40 years 1838-77; in the five years 1841-45 this proportion averaged 69·0 per 1000; and in the five years 1871-75 it was 70·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 69), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE 26.—ENGLAND.—**Annual Rate** of **Mortality** per 1000 of **Males** living at Twelve groups of Ages in each of the Forty Years **1838–77.***

(2 Years.) 1876-77	19·4	56·0	5·9	3·7	6·0	8·3	11·6	15·1	28·2	58·6	127·3	265·8	412·7

Note.—The Table may thus be read:—Of each 1000 female children living under five years of age, 62·1 died in each of the 40 years 1838-77; in the five years 1841-45 this proportion averaged 58·8 per 1000; and in the five years 1871-75 it was 60·2.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (see Table 69), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE **28.**—ENGLAND.—**Annual Rate** of **Mortality** per **1000** of **Females** living at Twelve groups of Ages in each of the Forty Years **1838–77.***

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar-General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 39 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the seven years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.)

TABLE 39.—**Population; Births and Deaths; and Rates of Mortality, during the Year 1877 in Fifty large Town Districts.**

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* For method of framing these estimates see note * to Table 40. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, excepting those for Nottingham, Salford, Oldham, and Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1877 by the addition of 6½ times the annual rate of increase which prevailed between 1861 and 1871. The rate of increase of population in Nottingham, Salford, and Oldham having since 1871 exceeded that which prevailed during the ten years 1861-71, revised estimates have been adopted for those three boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE 41.—LONDON.—**Deaths in Public Institutions** in the 52 or 53 Weeks of each of the Thirteen Years **1865-77.***

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1877 will not agree with those given on page 100, which relate to the correct year instead of the 52 weeks; moreover, the same Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no In-pensioners have been received there.

Average Number living to One Annual Death in 38 years	42	45	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered in each natural year, from 1st January to 31st December. Hampstead and Lewisham did not form part of London prior to 1847.

Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

NOTE.—The numbers for 1837 were registered in the half-year ending 31st December.

TABLE 52.—**Area,** estimated **Population,** and **Marriages, Births,** and **Deaths** registered in the **United Kingdom,** in the Year **1877.**

	Area in Statute Acres.	Area in Hectares.	Estimated Population in the middle of the Year 1877.	Marriages.	Persons Married.	Births.	Deaths.
United Kingdom	77,635,801	31,416,757	33,446,930	244,264	489,728	1,154,683	667,995
Great Britain - -	56,815,854	22,991,528	28,108,024	220,142	440,284	1,015,024	574,442
England and Wales -	37,319,221	15,102,008	24,547,309	194,352	388,704	888,200	500,496
Scotland - - -	19,496,133	7,889,520	3,560,715	25,790	51,580	126,824	73,946
Ireland * - - -	20,819,947	8,425,229	5,338,906	24,722	49,444	139,659	93,553

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 53.—**Proportion** per **1000** of **Marriages, Births,** and **Deaths** to the Population of the **United Kingdom,** in the Year **1877.**

	Acres to a Person.	Hectares to a Person.	To 1000 Persons living.			
			Marriages.	Persons Married.	Births.	Deaths.
United Kingdom - -	2·32	·94	7·32	14·6	34·5	20·0
Great Britain - - -	2·02	·82	7·83	15·7	36·1	20·4
England and Wales - -	1·52	·62	7·92	15·8	36·2	20·4
Scotland - - - - -	5·48	2·22	7·24	14·5	35·6	26·8
Ireland - - - -	3·90	1·58	4·63	9·3	26·2	17·5

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

TABLE 54.—**Population, Area, Births,** and **Deaths** in the **Islands** in the **British Seas** in each of the Twenty-seven Years **1851-1877.**

YEARS.	ISLANDS IN THE BRITISH SEAS.		ISLE OF MAN.		ISLAND OF JERSEY.		GUERNSEY AND ADJACENT ISLANDS.

Total	1,558,299	5,531,102	1,196,699	258,813	8,544,913

Average annual emigration from the United Kingdom { From 1815 to 1877 - - 135,634 / For the 10 years 1868-77 - - 224,257

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815–24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; 109,469 in 1876; and 95,195 in 1877.

NOTE.—The number of Deaths in the cols. 3 to 6 are estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in Table 64, the proportions which prevailed in 1861 being used from that year up to 1871, and the proportions which existed at the Census in 1871 for subsequent years; previously to 1861 the proportions used are those existing in 1851.

TABLE 66.—**Births** and **Deaths** among **Passengers, British Subjects,** on board Merchant Vessels at Sea, exclusive of Soldiers, Marines, and invalided Seamen from the Royal Navy, in each of the Twenty-two Years **1856–1877**, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Shipping and Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.

(Furnished to the Registrar General by the Registrar General of Shipping and Seamen.)

In the 26 years 1852-77	4,845,057	103,918	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 68.—RETURN of the AGES, RATING, and CAUSES of DEATH of **4,181 Seamen** reported to the BOARD OF TRADE in the Year 1877 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of* 1878.)

TABLE 70.

ESTIMATED POPULATION OF THE UNITED KINGDOM,

(including ISLANDS in the BRITISH SEAS)

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 69, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

TABLE 75.—SWEDEN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1850** to **1877.**

1877	4,484,542	30,674	61,348	138,475	83,175	13·7	30·9	18·5

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.
† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths the highest number in any year since 1801. In 1877 scarlet fever caused 7426 deaths and diphtheria 3367 deaths.

TABLE 76.—AUSTRIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1877.**

(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

1877	21,766,887	161,337	322,674	851,747	677,743	14·8	39·1	31·1

NOTE.—The Returns for Austria include Hungary, Croatia, Sclavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 Venetia was included; since 1864, however, it has been excluded. The facts for Hungary and Transylvania for years subsequent to 1867 appear in Table 77.
* Census years.
† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war. Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE **77.**—HUNGARY AND TRANSYLVANIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1866** to **1877.**

(Furnished by M. C. Keleti, Director of the Hungarian Statistical Department at Buda-Pesth.)

1877	36,961,000	279,094	558,188	944,576	801,954	15·1	25·6	21·7

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years. † Cholera prevailed in 1865–66, and war raged in 1870 and 1871.

1867	16,716,151	118,409	236,818	624,212	487,151	14·2	37·3	29·1
1868	16,853,212	111,684	223,368	579,464	548,690	13·3	34·4	32·6
1869	16,883,986	137,120	274,240	602,287	550,660	16·2	35·7	32·6
1870*	16,935,613	105,543	211,086	599,786	509,669	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 84.—ITALY (inclusive of VENETIA). **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1863** to **1877.**

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome, where the census was not taken until 1872) is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. *After the 1st of* January 1866 the marriages solemnized only in the churches, without civil contract, not being *legally recognized*, have not been registered; their number, which was very great in 1866 and the following year, *is happily* decreasing.

TABLE 85.—**Fluctuations** in the **Marriage Rate** of **England**,

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE. Current Events and General State of the Country.	Result of the Harvest.*
1839	15·9	Chartist riots. Chinese war	Deficient
1840	15·6	Penny postage came into operation. Canton blockaded	Do.
1841	15·4	British expelled from Cabul. Revenue deficient	Very deficient
1842	14·7	Turn-out of cotton spinners. Great general distress. Revenue deficient. Afghans defeated	Above the average
1843	15·2	Continued depression in manufacturing industry. Reduced value of agricultural produce. Deficiency in revenue. Repeal agitation in Ireland. Rebecca riots in Wales	Do.
1844	16·0	After a long period of depression, the opening of the year found the country for the most part in a thriving condition, with an increasing revenue and a reviving trade	Very good
1845	17·2	General prosperity of the country. Improvement in the revenue. Potato disease in England and Ireland. Short corn crops. Great increase of railway undertakings. Speculation mania, followed by commercial panic. Sikh war	Deficient
1846	17·2	Caffre war. Free Trade Bill passed. Corn Law repealed	Do.
1847	15·8	Commercial panic. £10,000,000 for Irish relief. Act relating to Free Trade came into operation. Owing to partial failure of crops the duty on corn was suspended till March 1848	Above the average
1848	15·9	Chartist riots. Sikh war. Agitation in Ireland. Revenue deficient	Very bad
1849	16·2	Cholera epidemic. Punjaub annexed. Duty on corn reduced to 1*s.* per quarter	Above the average
1850	17·2	Improvement of trade and revenue. Diminution of pauperism. Depressed condition of the agricultural classes was the only exception to the general prosperity of the country. Caffre war ended	Below the average
1851	17·2	Australian gold discovered. Great Exhibition opened	About the average
1852	17·5	Napoleon III. Emperor. Pegu annexed	Below the average
1853	17·9	Rise in the price of provisions owing to the bad harvest and to general prosperity, especially of the labouring classes; the very poor, however, suffered great privations	Bad
1854	17·2	War declared against Russia	Extremely good
1855	16·2	Russian war continued	Below the average
1856	16·7	Russian treaty. War with China and Persia. Revenue deficient	About the average
1857	16·5	Indian revolt. Great commercial panic	Above the average
1858	16·0	The commercial disturbance and distress of 1857 caused the revenue to fall short of the estimates during the the greater part of the year, but towards its close there were indications of improvement. The cost of the necessaries of life was lower than in 1856 or 1857	Do.
1859	17·0	At the commencement of the year pauperism had decreased and a spirit of general contentment prevailed. Treaties of commerce were concluded between England and Russia, and also with Japan. War with China	Under the average
1860	17·1	Commercial treaty with France. War in New Zealand. War with China; surrender of Pekin. Neapolitan revolt. Annexation of Savoy and Nice to France	Very deficient
1861	16·3	Famine in N.W. provinces of India. Owners of cotton mills in Lancashire began to employ hands on short time. Revenue deficient. Disruption of United States	Under the average
1862	16·1	Distress in cotton districts. Revenue deficient	Much below the average
1863	16·8	Continued distress in the cotton districts. Marriage of the Prince of Wales. War in New Zealand	Abundant

and some of the **Causes** which have contributed thereto, 1839–77.

TABLE 85. (*continued*)—FLUCTUATIONS in the MARRIAGE RATE of ENGLAND,

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.	
		Current Events and General State of the Country.	Result of the Harvest.*
1864	17·3	Duty on corn 3*d.* per cwt. War in New Zealand brought to a close	Good
1865	17·5	Cattle plague. Fenian conspiracy in Ireland	Below the average
1866	17·5	Great monetary panic in London. Cholera epidemic	Very unfavourable
1867	16·5	General commercial depression, and distress occasioned by want of employment among the artisan class. Rise in the price of bread	Deficient
1868	16·1	Abyssinian war. Revenue deficient	Productive
1869	15·9	Woolwich dockyard closed. Duty on corn ceased. No healthy revival of trade since commercial crisis of 1866. Revenue deficient. Opening of Suez canal	Deficient
1870	16·1	Trade and commerce depressed. Franco-German war	Under the average
1871	16·7	Revival of industrial and commercial activity. Cattle disease. Rise in prices and in the wages of labour	Deficient
1872	17·5	The year commenced with every promise of commercial prosperity, and there was a great increase of railway traffic. Great rise in the prices of the common commodities of life, which pressed hardly upon the salaried middle classes. Payment by France to Germany of 220 million pounds sterling	Do.
1873	17·6	American railway panic. Reaction from the high prices and excited demands in 1871 and 1872. Trade continued moderately active	Much below the average
1874	17·1	Strikes and disputes between masters and men. Wages in mining, iron, and steel trades fell. Price of commodities and wages generally declined	Very good
1875	16·8	Iron, coal, hardware, and shipbuilding trades agitated by strikes. Repudiation by Turkey of part of its obligations. Fall in price of silver	Very unsatisfactory
1876	16·7	Reduced wages. Commercial failures	Unsatisfactory
1877	15·8	Prevalence of strikes. The year was unfavourable for the farmer. Depression on the Continent and in United States. Political conflict in France. War between Russia and Turkey. Famine in Southern India	Do.

* The *Registration or Union Counties*] consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1877.

‡ Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 82 cases of marriage after divorce, see Table 12, page lvii.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1877—*continued.*

* The *Superintendent Registrars' Districts* (631 in number at the end of the year 1877) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

* The Sub-districts (2185 in number at the end of the year 1877) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L.A.* Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1877 are given on pages 99-120.

* 14 : 5.—Haggerston sub-district consists of those two divisions of the civil parish of Shoreditch, which, prior to the 1st July 1877, formed the sub-districts of Haggerston West (14 : 5), and Haggerston East (14 : 6). See Table 8, p. cxx. In this table of Births and Deaths the facts are inserted as if the alteration had taken place on 1st January 1877.

DEATHS IN PUBLIC INSTITUTIONS,

1877.

The following pages contain the numbers of deaths registered during 1877 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1448 Institutions; of which 721 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 644 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1448 Institutions 49,332 deaths were registered during the year, or 9·9 per cent. of the total deaths in England and Wales, against 8·8 and 9·1 per cent. in the two preceding years; 32,096 occurred in Workhouses, 12,570 in Hospitals, and 4666 in Lunatic Asylums. Each of these totals exceeded the corresponding number in 1876, and the proportion to total deaths was 6·4 in Workhouses, 2·5 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the **Public Institutions** of **England** in the **Year 1877.**

NOTE.—The Table may be read thus: Of the 260,567 deaths of Males, 67,616 were those of children under 1 year of age; 21,298 those of the age 1 and under 2 years; 8,987 of the age 5 and under 10 years; 5,854 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 22 males registered as aged 100 years and upwards: namely, 10 aged 100, 4 aged 101, 6 aged 102, one aged 103, and one aged 105 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 33, page lxxviii, of Report.

The *Causes of Death* in England and in London, in combination with the Ages at Death, are given at pp. 140–161.

1877.

CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND AND LONDON.

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES, AND DISTRICTS.

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated "Heart Disease,"—in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is the disease of the organs without any further distinction.

APPENDIX.

Letter to the Registrar General on the Causes of Death in England and Wales, by W. Farr, Esq., M.D., F.R.S.

Year 1877.

Sir,

In your Report you show that the mortality in the year 1877 was exceedingly low. Upon examining the causes which have been less than usually fatal, it will be found that there was a considerable decline from 1875 in the zymotic class; a decline also in the class of constitutional diseases, and in the developmental diseases, and a slight decline in the deaths by violence. The class of local diseases was rather unusually in excess of the average.

I.—Zymotic Diseases.

Diarrhœa was much below the average. It only destroyed 601 lives in 1,000,000, the average being 891. Small-pox (higher than in the preceding four years) was much below the average; so were measles, scarlet fever, croup, whooping-cough, and fever. Rheumatism was unusually fatal, as it had been in the three previous years.

87,043 deaths occurred from zymotic diseases; 79,640 from miasmatic diseases, of which 4278 were caused by small-pox, 9045 by measles, 14,456 by scarlet fever, 2731 by diphtheria, 3910 by croup, 11,358 by whooping-cough. These diseases affect children chiefly, but in different degrees: thus, whooping-cough of the 11,358 victims counted 11,016 under 5 years of age, of whom 5968 were girls, 5048 were boys; croup of 3910 counted 3318 under 5 years of age. Measles was fatal to 8377, out of 9045, under 5 years of age, of whom 4380 were boys and 3997 were girls; small-pox was fatal to 1056, out of 4278, under 5 years of age; scarlet fever to 9377 out of 14,456; diphtheria to 1456 out of 2731. The air passages are easily obstructed in the first years of life, which will account for the excess of deaths from whooping-cough and croup; and also partly for the excess of deaths from measles in the first five years of life. Fever is a type of the diseases that are most fatal in the prime of life; thus of the 6879 deaths from enteric fever at all ages, 1131 were of children under 5 years of age, and 987 were of persons of the age 25 and under 35, the age at which the greatest number of adult deaths are recorded from that form of disease. Diarrhœa is excessively fatal in the first five years of life. Rheumatism is most fatal at the ages 25–35 and 65–75. Erysipelas caused 693 deaths of children under one year of age, and 271 of persons aged 65–75. Enthetic diseases were fatal to 2436 persons; 2085 of whom died of syphilis, 268 of stricture of urethra, 79 of hydrophobia, and 4 of glanders. The deaths from syphilis in the last three years have been 90, 89, and 86 to 1,000,000 living. In the five previous quinquenniads the proportions were 37, 51, 64, 82, and 81; so that there has really been an increase in the three years over the two previous quinquenniads; but at the same time there is a tendency to decline in the last two years. The great majority of the deaths were of infants in the first year of age; who it is plain had been infected by the parents. It is one of the sad features of

this disease that life is poisoned at its source; and in the efforts that are made to diminish the prevalence of the disease, we must bear in mind that not only the persons who have been guilty of actively propagating the disease are involved, but innocent children are the principal sufferers. 1551 were children in 1877 under one year of age; 171 were one and under 5; and 363 were 5 years of age and upwards of whom 206 were females, and 157 were males. Stricture of the urethra, the result of gonorrhœa in men, was the cause of 268 deaths.

Hydrophobia has been much more prevalent in the last eight years than it was previously. To 1,000,000 living less than one (0·3) death annually was ascribed in the five years 1860–4; in the next two quinquenniads the proportion rose to ·9 and 1·8 deaths; in the last three years the mortality was 2, 2, and 3. Thus the proportion was ten times as great in 1877 as in the years 1860–4; glanders is rarely fatal, and it shows no increase.

Among dietetic diseases there are some notable changes. Thus the deaths from privation which had been 3·8 declined to 2 in 1,000,000 in the last year. Purpura and scurvy were unusually fatal; the deaths which were 18 in 1,000,000 in the 25 years 1850–74, rose to 22, 26, 31 in the last three years. Alcoholism, which was fatal to 40 in 1,000,000 in the 25 years 1850–74, was fatal to 48, 46, and 47 in the three years 1875-6-7.

Parasitic disease was less fatal in 1877 than in previous years.

II.—Constitutional Diseases.

Diathetic diseases are less fatal than they were; this decline is due to dropsy which is now frequently classed under heart or kidney diseases by which it is assumed to be caused. Gout is twice as fatal as it was fifteen years ago. There is no doubt that this is partly due to excesses of the table, which are producing more fatal effects every year, and which deserve to be watched with as much attention as alcoholism. Cancer is one of the saddest diseases to which mankind is liable; and it is unfortunately on the increase. In the five quinquenniads 1850–74 the annual mortality was 302, 327, 369, 404, and 443 to 1,000,000 living: while in the last three years the annual deaths were 480, 481, and 496. This high mortality well deserves special investigation; and is recommended to the attention of the pathological society. Is there any ground for supposing that it is transmissible from person to person?

There is a decided tendency in tubercular diseases to decline; thus the annual proportion of deaths to 1,000,000 was in the five quinquenniads 1850-74, 3655, 3448, 3368, 3326, and 3018: in the twenty years the decline was 637, and in the last three years there has been a further decline which has brought the number down to 2884. Unfortunately there has been a countervailing increase in diseases of the respiratory organs, so that there is reason to suspect that the change is partly due to nomenclature.

III.—Local Diseases.

The proportional number of deaths due to diseases of the nervous system was 2761 to 1,000,000. The deaths ascribed to apoplexy were 13,283 and to paralysis 11,937. 1509 deaths were ascribed to insanity, by which it must not be understood that this was the total number of insane persons who died in the year; but the number of the insane whose deaths were referable to no other disease. The greatest number of deaths was ascribed to convulsions, 24,147; that is more than one-third of the total of 67,514 deaths referred to the diseases of the nervous system. 19,236 were of infants under one year of age; of whom 11,105 were boys and 8131 were girls.

34,330 persons died of diseases of the organs of circulation. The increase has been great since 1850 when only 11,356 were referred to this

head. In the last year the increase was 2379: 820 deaths were due to aneurism; 708 to pericarditis, carditis, or endocarditis; 452 to angina pectoris, of whom 298 were males, 154 were females; 1998 to syncope; 388 to embolism or thrombosis, of whom 139 were males, 249 were females; 51 to varicose veins, of whom 15 were males and 36 were females. 29,247 deaths were returned simply as from heart disease.

88,543 deaths were ascribed to diseases of the respiratory organs; the greater number, 54,006, to bronchitis, and 23,696 to pneumonia. The mortality from these diseases was 3620 out of 1,000,000 living.

The deaths due to diseases of the digestive organs were 24,603, or 1006 out of 1,000,000 living; 499 deaths were due to ascites, of which 301 were of females, 198 of males; 1094 were the result of hernia, 565 in males and 529 in females.

Of urinary diseases 10,294 persons died; 6659 were males, 3635 females; for obvious reasons these diseases are much more prevalent and fatal in the male than in the female. Bright's disease is the most fatal disease now recognised, and to it 4763 deaths were referred of which the numbers of males and females were 2692, and 2071. Diabetes was fatal to 1006 persons, of whom 663 were males, and 343 were females. To calculus and gravel 245 deaths were directly ascribed, 206 were of males, 39 were of females. To Addison's disease 92 deaths were referred, 51 of males, 41 of females.

To the diseases of the organs of generation 1400 deaths were due, 64 in males, 1336 in females. Among the deaths of males 10 are referred to orchitis, 2 to hydrocele, 36 to disease of perineum. Of the deaths of females 355 are ascribed to ovarian dropsy, 96 to ovariotomy, 762 to disease of the uterus. The deaths due to ovarian dropsy were at a minimum in 1874 when 168 deaths were recorded; the deaths from this disease were 219 in the year 1850. In 1875 a sudden start took place and in that and in the two years following the deaths were 343, 327, and 355. To what is this due? It is impossible to say; but it is possible that in the first years of the introduction of the operation by Spencer Wells, the great care taken in the operation prevented deaths, which, now the operation has become common, are its more frequent consequences.

Diseases of the organs of locomotion occasioned 2373 deaths. Mollities ossium is mentioned as the cause of 18 deaths, five were of boys under 5 years of age, one of a man aged 20–25, 12 were of adult women.

Diseases of the integumentary system caused 2054 deaths, including 444 by phlegmon, 8 by whitlow, 584 by pyæmia, 401 by ulcer, 343 by eczema, 16 by elephantiasis.

IV.—Developmental Diseases.

71,906 deaths were due to developmental diseases; including 18,179 to developmental diseases of children, 2116 of adults, 26,078 of old people, and 25,533 to diseases of nutrition. 11,618 of the children's deaths were of children prematurely born; 4470 were referred to teething; 2091 to malformations of various kinds, namely, 844 to cyanosis, 653 to spina bifida. Here note that there is a great excess of males who died of cyanosis, and of females in the deaths from spina bifida. 3443 mothers died of metria, or of the accidents of childbirth, or 3·9 to every 1000 children born alive, the average since 1847 was 5 per 1000.

V.—Violent Deaths.

17,684 deaths by violence were recorded in the year, and this implies a mortality of 723 to 1,000,000; this is lower by 70 than was observed in the year 1875.

There has been a great decrease in the deaths by "burns," which were 138 to 1,000,000 living in 1862 and were 90 in 1877. The decline has

been progressive since 1860–4 when the deaths by burns were 147 in 1,000,000; in the two following quinquenniads the deaths were 122 and 107; in the last three years the decline was still more startling; it was 109, 102, and 90. The deaths ascribed to suffocation showed increasing numbers; the proportions were 57, 61, and 67 in the three quinquenniads 1860–74; 72, 71, and 69 in the last three years. Fractures and contusions have grown more fatal.

Homicide has been less fatal than it was; suicide was slightly more fatal than it was, the increase being due to drowning. Executions have been more common in the last three years than they were in the three previous quinquenniads.

The tables (p. 198–221) show in detail a classification of injuries which proved fatal. The first class shows that 1106 males and 77 females were killed on railways. The Board of Trade returns show 1175 deaths by the same causes in the *United Kingdom*; including 126 of passengers, 642 of officers and servants of the companies, and 407 of trespassers, or suicides, or other persons who met with accidents at level crossings, or from miscellaneous causes. The deaths of passengers, servants, and others returned to the Board of Trade for England and Wales were 959; a number less by 224 than the numbers returned to the Registrar General, which are undoubtedly the more complete of these two returns. It is probable that the whole number of passengers and others who die of the remote consequences of injuries are not returned to the Board of Trade. It will be noticed that few boys were killed on railways, 7 only were under 5 years of age, 28 were 5–10, 54 were 10–15; the greatest number of males, 233, were of the age of 25–35. Of the 77 females, 6 were under 5 years of age, 5 were 5–10, and 6 were 10–15, 8 were of the age of 25–35, 17 of the age 35–45, 5 of the age 45–55, 10 of the age 55–65, 9 of the age 65–75, and 3 of the age 75–85. It is plain from these returns that the travellers killed by railways are chiefly men, most of whom are in the prime of life.

909 males died of injuries in mines; 823 in coal mines and 86 in mines of copper, tin, iron, or other minerals; only 4 women, two of whom committed suicide by throwing themselves down shafts, were killed in mines. It is worthy of remark that while 72 men died by explosion, 2 by burns, and 61 by choke-damp, 399 were killed by the fall of coal, stone, &c., and 53 were crushed. All these deaths occurred to adult men in coal mines.

5049 males and 1396 females died of mechanical injuries of various kinds. Of the numbers so returned, 243 males were killed by injuries from horses and other animals; 43 by carriages, 26 by omnibuses, 14 by tram cars, 33 by cabs, 325 by vans or waggons, 26 by drays, 535 by carts, and 71 by other conveyances. Thus it will be found that of males 1073 were killed by horse conveyances, and 243 by horses, making in the aggregate 1316; of females only 18 died of injuries from horses, 189 from horse conveyances; 1523 were the total deaths from horses or horse conveyances, which thus exceed the deaths by railways. More persons are perhaps exposed to accidents of that kind than the travellers on railways. If a new means of conveyance has been introduced by the bicycle, a new cause of death has also been introduced: one child and five men died by bicycles.

By chemical injuries 1445 males and 1344 females died. Burns and scalds make up the majority of cases; they constitute, exclusive of deaths by explosions and by lightning, 2049 of the deaths. 559 males died of burns, 359 of scalds; 824 females died of burns, and 271 of scalds; one man, 20 boys, and 15 girls died by drinking scalding water. The girls wear combustible dresses of cotton or linen; the boys wear woollen dresses, which are, comparatively speaking, incombustible: this accounts for a difference of 265 deaths in the deaths by burns. Ten men and 2 women died by lightning; 67 males died by sunstroke, 15 females died

of the same cause; 86 deaths of males, 32 deaths of females, were ascribed to gelatio or cold.

311 males and 173 females died of poisoning: 46 males and 12 females by lead; 20 males and 11 females by carbolic acid; 38 males and 25 females by laudanum and syrup of poppies; 25 males and 11 females by alcohol.

There were 2728 deaths of males by drowning, of whom 169 were drowned while bathing, 2 while skating or sliding, 76 by upsetting of boats. One female was drowned while bathing, 8 were drowned by upsetting of boats: in all 666 females were drowned. Thus 3394 persons were drowned whose deaths were registered. This is exclusive of many of the merchant seamen and men and officers in Her Majesty's Navy drowned.

347 deaths were homicides; a great part of them were infanticides, namely 78 boys, and 64 girls; thus leaving 205 deaths by murder and manslaughter. There were only 14 killed by human agency out of 1,000,000 living; or one in 1427 of the deaths were caused wilfully by criminals.

Violent Deaths and Homicides in Italy and in Eleven other Countries.

This presents a considerable contrast with what is observed in Italy. There the homicides amounted in 1876 to 1504*; against 412 recorded in England and Wales during that year. Thus to 1,000,000 of population there were 54 homicides in Italy against 17 in England. If we had the same proportion the homicides would have amounted to 1309 in England and Wales. In Rome the proportion is much higher: it is 141 in Rome, in Sicily 137. The practise of assassination is thus shown to yield these terrible results.

Although the results in England are so much more favourable as regards homicide than in Italy, it is the reverse with other violent deaths: there the violent deaths in 1876 were 6656 against 18,358 (exclusive of executions) in England; or 240 in 1,000,000 of population in Italy against 757 in England.

If we deduct the 1024 suicides and 1504 homicides, there will remain 4128 violent deaths in Italy; from which we deduct also 47 deaths from intemperance, and 6 from hydrophobia and bites of vipers, and one by privation. To render them comparable with the English returns we obtain 4074 which are thus accounted for:—

Deaths by Violence in Italy in 1876.

Drowning	1324
Suffocation	137
Explosions	131
Burns	337
Lightning	147
Falls	1109
Crushes from falls of fabrics, trees, earth	332
Horse and horse conveyances	167
Railways	84
Agricultural machinery	34
Violence of animals	68
Avalanches	7
Injection of poisonous substances	34
Unknown and various causes	163
	4074

* The homicides are thus classified according to the returns made to the "Stato Civile": involuntari 285; voluntari 1163; infanticide 56. They are little more than half the number given by the Judicial Statistics. There is no coroner's inquest in Italy.

Upon comparing these with the English returns the difference is evident. There are no mines in Italy; and the physical forces set in motion by coal are much less than in England and Wales. The railway accidents and burns are less fatal there than in this country. Upon looking back to the state of England in the last century we shall find a state of things very like what is prevalent now in Italy, and our progress in the industrial arts has been accompanied by hecatombs of deaths which it becomes necessary to endeavour to avert by special measures. The genius of the country has been directed to the achievement of certain works, and has never asked at what expense of life. The time has come to ask at what cost? and to consider carefully how life may be saved. For though there are fewer homicides in England and Wales than in Italy, it must be recollected that the lives are equally sacrificed by negligence as if they were taken by the red hand of the murderer. The 574 lives lost in the "Princess Alice" were lost to the country as completely as if they had been deliberately sunk in the Thames. Then does it not follow that the thousands of lives lost in England are of little less importance than if they fell under the hand of the assassin? The mine inspectors and the railway inspectors are well employed if they suggest improvements by which life may be saved; and the same analogy would lead us to try how far similar minds may be directing to the suggesting ways of saving life. The medical health officers will be well employed in this direction.

It will be seen in the annexed table that the United Kingdom is at the head of every country except Switzerland in the number of violent deaths. The avalanches and falls down precipices no doubt give Switzerland its fatal pre-eminence.

TABLE showing the POPULATION in 1876, and the NUMBER of DEATHS from VIOLENCE, distinguishing those from SUICIDE, HOMICIDE, and ACCIDENT in each of the undermentioned COUNTRIES.

COUNTRIES.	Population, 1876.	Deaths from Violence.	Suicide.	Homicide.	Accident and Negligence.	Proportion to 1,000,000 living.			
						All Causes of Violent Deaths.	Suicide.	Homicide.	Accident and Negligence.
Switzerland - - -	2,759,854	2,550	540	109	1,901	924	196	39	689
United Kingdom† - -	33,304,490	25,798	2,052	533	23,213	775	62	16	697
England & Wales -	24,244,010	18,358	1,770	412	16,176	757	73	17	667
Scotland*‡ - -	3,495,214	2,516	128	4	2,384	720	37	1	682
Ireland - - -	5,321,618	2,083	111	88	1,884	391	21	17	353
Norway* - - - -	1,787,960	1,295	126	23	1,146	724	70	13	641
Finland* - - -	1,883,556	1,179	64	66	1,049	626	34	35	557
Sweden - - - -	4,429,713	2,740	409	88	2,243	619	92	20	507
Prussia* - - - -	25,693,677	15,815	3,432	547	11,836	616	134	21	461
Bavaria - - - -	5,062,125	2,629	522	198	1,909	519	103	39	377
Belgium - - - -	5,836,185	2,577	439	85	2,053	483	82	16	385
Austria - -	21,565,435	10,150	2,438	—	—	471	113	—	—
Italy - - - -	27,769,475	6,656	1,024	1,504	4,128	240	37	54	149

* The above facts given for Norway are for the year 1873, for Scotland 1875, for Finland 1874, and for Prussia 1875.

† The figures for the *United Kingdom* relate to the population inclusive of the Royal Navy and Merchant Service.

‡ The difference between Scotland and England may be partly accounted for by the returns for England being made by coroners juries and in Scotland by the sheriff substitute: of 430 persons apprehended for murder or manslaughter, and 417 cases of inquest in which the verdict was murder, or manslaughter, or homicide, 247 prisoners were committed for trial in England.

Proximity of Population.

I am indebted to Dr. Robertson of Edinburgh for the following communication:

"In letters that have reached the Registrar-General of Scotland some doubts have been expressed as to the accuracy of the formula connecting Density with Proximity. Dr. Farr has most kindly communicated to the Statistical Superintendent the following full account of the mathematical reasoning which originally led him to the establishment of the formula, and which may be regarded as a demonstration of its accuracy:—

'Density and Proximity.

'The density of the population is determined by dividing the population of the country or district by the area. Prony calls this the specific population. It may be described thus:

$$d = \frac{P}{A}, \text{ where P represents the population and A the area.}$$

'It is assumed that the population is evenly distributed over the area.

'Now, let a be the area to each person; then $a = \frac{A}{P}$; it is the reciprocal of d, or $a = \frac{1}{d} = \frac{A}{P}$. This a may be called the *areality*.

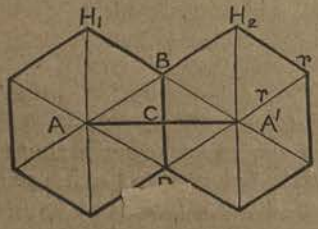
'Now, upon the same hypothesis of even distribution over the area, what is the *proximity* of person to person?

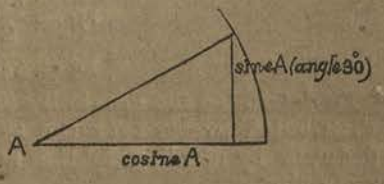
'In England the areality (in 1878) is 7267 square yards to each person; for the population is 24,854,397, and the area is 58,311 square miles, or 180,625,029,640 square yards. So areality, or $a = 7267$ square yards. If areality is 7267 *square* yards, then proximity is 91·604 *linear* yards.

'Any other unit might be taken to express the proximity and the areality. But if the areality is expressed in square miles, the proximity must be expressed in linear miles; if in square yards in linear yards; if in square metres in linear metres. The yard or the metre is the most convenient unit by which to express the proximity.

'Proximity.

'To explain its derivation from the given *areality*. All the persons of the population may be conceived as in the centre of plots of ground in equal hexagonal forms; then if the area of the hexagon is known the mean distance from person to person is known. The proximity is a function of the areality.





'Strike a circle with radius r, then inscribe therein a hexagon H_1 with the side r in the usual way; construct six similar hexagons on the six sides. The line AA′ from the centre A of H_1 to the centre A′ of H_2 represents the proximity p; AA′ = AC + CA′ where AC = CA′.

'And as $AC = r \cos 30°$, $p = 2r \cos 30°$,

Now $BC = r \sin 30°$; and $BD = 2r \sin 30°$,

And $$r = \frac{p}{2 \cos 30°} = \frac{p}{2 \times \frac{\sqrt{3}}{2}} = \frac{p}{\sqrt{3}}. \quad \text{(Equation 1)};$$

'The area of the triangle

$$ABD \text{ is } BD \times \frac{AC}{2} = 2r^2 \sin 30. \frac{\cos 30°}{2} = r^2 \sin 30°. \cos 30°;$$

but there are six similar triangles in the hexagon (H_1), the area of which is therefore—

$$a = 6r^2 \sin 30°. \cos 30°.$$

But $$r \sin 30° = \tfrac{1}{2}r : \text{and } r \cos 30° = \frac{\sqrt{3}}{2} r;$$

$$p = 2r \cos 30° = 2 \frac{\sqrt{3}}{2} r = \sqrt{3}r \therefore r = \frac{p}{\sqrt{3}}.$$

'By substituting for r its equivalent $\frac{p}{\sqrt{3}}$ in equation 1, we have instead of

$$a = 6r^2 \sin 30°. \cos 30° = 6 . \frac{1}{2} . \frac{\sqrt{3}}{2} r^2; \; a = \frac{6p^2}{3} . \frac{1}{2} . \frac{\sqrt{3}}{2} = \frac{\sqrt{3}}{2} p^2.$$

$$\text{And } p^2 = \frac{2}{\sqrt{3}} a = \frac{2}{3^{\frac{1}{2}}} a:$$

taking the square root of both sides, $p = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}} a^{\frac{1}{2}} = \left(\frac{4}{3}\right)^{\frac{1}{4}} a^{\frac{1}{2}}$.

'Thus, putting $\frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}} = \left(\frac{4}{3}\right)^{\frac{1}{4}} = c$, which is a *constant*, and is equal to the square root of 2 divided by the fourth root of 3, or to the fourth root of 4 divided by the fourth root of 3, the formula is reduced to the simplest form :—$p = ca^{\frac{1}{2}}$ = proximity when areality (a) is given; and $a = \left(\frac{p}{c}\right)$ = areality when p is given.

'Thus the proximities vary as the square roots of the arealities; the arealities as the squares of the proximities; precisely as the areas of circles vary as the squares of their radii.

'By logarithms—

$$\lambda c = \frac{\lambda 4 - \lambda 3}{4} = \cdot 0312347$$

$$\text{and } c = 1 \cdot 07457$$

$$\lambda p = \frac{\lambda a}{2} + \lambda c$$

$$\lambda a = 2(\lambda p - \lambda c).$$

'To determine the proximity of houses on the hypothesis that they are all distributed evenly over the surface of the country, the house areality is deduced by dividing by the number of houses the area expressed in square units.

'Let the *house-areality* be expressed by a', and if there are 5 persons to a house, as

$$a = \frac{A}{P} \text{ and } P = 5H; \text{ then } a' = 5a.$$

'The proximity of the houses (p') is thus determined from the proximity of the population by substituting a' for a in the previous formula.

$$\text{And } p' = a'^{\frac{1}{2}}c = (5a)^{\frac{1}{2}}c = 5^{\frac{1}{2}}a^{\frac{1}{2}}c = 5^{\frac{1}{2}}p.$$

'And generally, to obtain the proximity of houses from the proximity of population (p), multiply the latter by the square root of the mean number of persons to a house—say n $\therefore$ $n^{\frac{1}{2}}p = p'$.

'W. FARR.'

"The following independent and original demonstration of the truth of the formula the Statistical Superintendent owes to the kindness of Professor Tait. In regard to this demonstration it is right to explain, that it was communicated before Professor Tait was made aware of the process followed by Dr. Farr in establishing the formula:—

'Taking a hexagonal distribution, let $n + 1$ be the number of points on each side (including both ends), then

$$\text{Whole number of points} = 1 + 6\frac{n\overline{n+1}}{1 \cdot 2}.$$

'But those at the corners (6) belong each to only two triangles *in* the hexagon and to four external ones. They count therefore only as $\frac{2}{6} \times 6$. Those on the sides but not at corners $\big(6(n-1)\big)$ belong to as many outer as inner triangles, and therefore count only as $3(n-1)$. Hence, subtracting $3(n-1)$ and $\frac{4}{6} \times 6$ from the above number, we have

$$\text{Virtual number of points} = 1 + 3n\overline{n+1} - 3\overline{n-1} - 4 = 3n^2.$$

'Also, the number of triangles in the hexagon is evidently $6n^2$.

$$\text{Thus,} \quad \frac{\text{No. of points}}{\text{No. of triangles}} = \frac{3n^2}{6n^2} = \frac{1}{2}.$$

'But the area of one triangle, if l be the length of side, is $\frac{l^2}{4}\sqrt{3}$.

$$\text{Thus,} \quad \frac{\text{No. of points}}{\text{Area of hexagon}} = \frac{1}{\frac{l^2\sqrt{3}}{2}}.$$

This is the reciprocal of the 'mean area to each person,' what Farr calls a.

$$\text{Hence} \quad a = l^2\frac{\sqrt{3}}{2}, \text{ or } l = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}}a^{\frac{1}{2}}.$$

'Hence it appears that l is what Farr calls p or proximity.

'This method is rigorous even when $n = 1$, so that it applies to any form of area.'

In an additional note Professor Tait writes:—

'Still better, and I don't think to be farther improved.

'Take *one* equilateral triangle. Its three corners count each for $\frac{1}{6}$th only, *being common to other five triangles.*

'Hence $\frac{\text{points}}{\text{triangles}} = \frac{\frac{1}{6} \cdot 3}{1} = \frac{1}{2}$, and the same holds good for any number of such triangles grouped together.'"

Density or Proximity of Population: its Advantages and Disadvantages.

Dr. Chervin, in a periodical of great merit,* points out the fact that Carey, Schaeffle, and Herbert Spencer have not succeeded in applying statistics to their theory of sociology. In our social science we were more fortunate. It is true that in many branches of social science we have to forego the use of analysis; but to others analysis has been successfully applied. I propose to illustrate one of these applications.

The population is distributed over the face of the earth in town and country; and I will consider here some of the advantages and disadvantages of the two kinds of distribution. To do this we must, for mathematical purposes, use terms more precise than town and country: and density—usually of population—has been the term employed. For instance, the density of population in England (1861–70) was 367 persons to a square mile. This implies that England is divided into 58,311 square miles; and that on each square mile there are 367 persons. The density of population on every square mile is different, but taken in the aggregate this is the mean density.

We can conceive the mean population of England in 1861–71 (21,389,245) distributed over 37,319,221 acres, or one person to every 1·74 acres. Thus, imagine the population distributed in the centre of circles—or rather hexagons—of the area of 1·74 acres; then every person must be a certain number of yards from his neighbour: this distance I propose to call the proximity. The proximity of the people of England—their nearness to each other—is now (in 1876) 93 yards.

The advantage of residence in towns—of proximity of people to each other—is evident. Man is a sociable animal; and naturally in his workshop meets his fellow-man. It is, perhaps, impossible to enumerate all the ways in which men derive pleasure or benefits from frequent intercourse with each other; but it is possible to determine the sum of their gratifications by an economical test. What do they give per acre for the ground on which they live in country and town? You will find as from the country you approach the centre of the town the value of the land increases; thus it is 25*l.*, 50*l.*, 100*l.*, 200*l.*, 400*l.*, 800*l.*, 1600*l.* per acre. Now, on what score are these additional sums demanded or given? Is it not that men derive advantages from living near to each other?

There are countervailing disadvantages to which I shall now invite your attention. The first disadvantage strikes every one that comes from the country; and is embodied in Cowper's line—

> "God made the country, and man made the town."

In the country you are surrounded by fields, by trees—in hill or vale; there the breezes coming from sea, shore, or mountain have free play. The atmosphere is redolent of ozone. In the town, this is wanting. Angus Smith, by chemical tests, proves the air is different. You know that nitrogen and oxygen are everywhere nearly the same in proportion; but carbonic acid varies with the density of population, and there are exhalations—smokes—of various kinds from dead matter, as well as from living bodies. Every town has an atmosphere of its own. Nay, every street has its own peculiar atmosphere. I was going to say that every living being has its own atmosphere.

Now, this atmosphere becomes in certain proportions deleterious, and I will proceed to show that as the population becomes more dense—within certain limits—this deleteriousness is expressed by the mortality. For example, if we arrange the 619 districts of England and Wales in groups according to the rates of mortality, we find that the 18 groups follow this

* Annales de Démographie Internationale, No. 5. Article.—Sociologie et Statistique, pp. 75–96.

law; the rate of mortality increases as the density of population increases.* Thus at one end of the scale the deaths per 1000 of population are 15, 16, 17; at the other end of the scale, 31, 33, and 39; the acres to a person in the corresponding districts are 12, 4, and 3; and ·01, ·05, and ·01. The intermediate rates of mortality are 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, and 29; the acres to a person are 4·0, 3·3, 2·9, 2·1, 1·1, 1·0, 0·5, 0·2 and ·02.

Now, excluding the London districts, about which there is some difficulty, we have seven groups of districts where the mortality ranges thus: 17, 19, 22, 25, 28, 32, and 39. In the same districts the numbers of persons to a square mile are—166, 186, 379, 1718, 4499, 12,357, and 65,823. Thus in Liverpool, the densest and the unhealthiest district in England, there were 65,823 persons to a square mile; of whom 39 per 1000 died annually. This series of facts may be put in a different way: the nearer, people live to each other the shorter their lives are. Thus, the proximity of people in 53 districts is 147 yards, the mean duration of life is 51 years; in 345 districts the proximity is 139 yards, and the mean duration of life is 45 years; in 137 districts the proximity is 97 yards and the mean duration of life is 40 years; in 47 districts the proximity is 46 yards, and the mean duration of life is 35 years; in 9 districts the proximity is 28 yards, and the mean duration of life is 32 years; in Manchester district the proximity is 17 yards, and the mean duration of life is 29 years; in Liverpool district the proximity is 7 yards, and the mean duration of life is 26 years.†

This is a determined law; and the duration of life being given in one set of conditions, the duration of life in another set of conditions is determined from the proximities.

$$e' = e\left(\frac{p'}{p}\right)^{\cdot 23996}; \quad 35 = 45\left(\frac{46}{139}\right)^{\cdot 24}$$

applied to the districts where the mean lifetime is 45 and the proximity 139 yards enables us to determine the lifetime where the proximity is 46 yards.

We will now draw some inferences from this law: that proximity and shortness of life go together.

(1.) The question is of the highest importance to England. Every town is surrounded by circles of new houses; and at every census villages are found grown into new towns. Thus, in the last three censuses, the town population was set down at 8,990,809, 10,960,998, and 14,041,404; and to England and Wales 2,000,000 of people have probably been added since the census of 1871, the greater part of whom will be found in the towns.

Now, according to our law, this should imply an increase of mortality; and no doubt such an increase would have been observed, had there not been a countervailing law in operation.

(2.) The mortality was at the annual rate per 1000 in the last three decenniads of 22·36 in 1841–50, 22·24 in 1851–60, and 22·51 in 1861–70. In the last seven years, 1871–7, the mortality was at the rate of 21·64, or ·87 per 1000 less than in the ten years last quoted. Thus we may hope that there is a reduced mortality in the last seven years; and that thus about 20,000 lives are saved annually.

(3.) While the population has increased, the atmosphere has become purer; and this should encourage us to persevere in our efforts in the same direction.

---

* The mortality and the density are for the ten years 1861–1870. See Supplement to Registrar-General's 35th Report, p. cli. to clxii.

† It has been found that the mean duration of life of a people (by the English and other Life Tables) is nearly equivalent to the reciprocal of the death-rate *minus* one-third of the difference between the reciprocal of the death-rate and that of the birth-rate; and the above values were determined in this way. Thus the birth-rate in the group of 53 districts was ·03022 and the death-rate ·01675; so

$$\frac{1}{\cdot 01675} - \frac{1}{3}\left(\frac{1}{\cdot 01675} - \frac{1}{\cdot 03022}\right) = 59\cdot 7 - \frac{1}{3}(59\cdot 7 - 33\cdot 0) = 51.$$

(4.) The law of proximity would lead us to lay down some standard, and to fix some invariable rule, that beyond a certain density, no further houses should be built on the town areas. Thus, in 23 towns of the United Kingdom, there are 38 persons to an acre; and if such was the standard, where would Liverpool be with its 102 persons to an acre; where would Glasgow be with its 94 persons; Manchester with its 84 persons; Edinburgh and Plymouth with their 53 persons to an acre?

(5.) It is certain that the most effective means of reducing the mortality is to thin the dwellings in the dense parts of the towns; to abolish under Mr. Cross's Act, all the rookeries, and not to rebuild them.

(6.) Simultaneously to put a stop to much of the smoke, and to the sewage gases which are poured into the air the population breathes.

(7.) The law might enact for the future that squares and parks should be left in the area of every town; as these spaces are indispensably required for the health of the population.

(8.) And for the present time the whole of the available land should not be built over, but spaces be appropriated for parks wherever they can be procured. Miss Vernon's paper in the transactions of the Social Science Association will throw much interesting light upon this subject.

(*See Diagram on opposite page.*)

TABLE A.—PROXIMITY OF POPULATION.

Five hundred and ninety-three districts of England and Wales are arranged in seven groups in the order of mortality. The districts of London are excluded.

	Proximity of the Population (in yards).	Number of living out of which one will die annually.	Mean duration of Life.
Liverpool	7	26	26
Manchester	17	31	29
9 Districts	28	36	32
47 Districts	46	40	35
137 Districts	97	46	40
345 Districts	139	53	45
53 Districts	147	60	51

TABLE B.—STATES OF EUROPE, 1876.

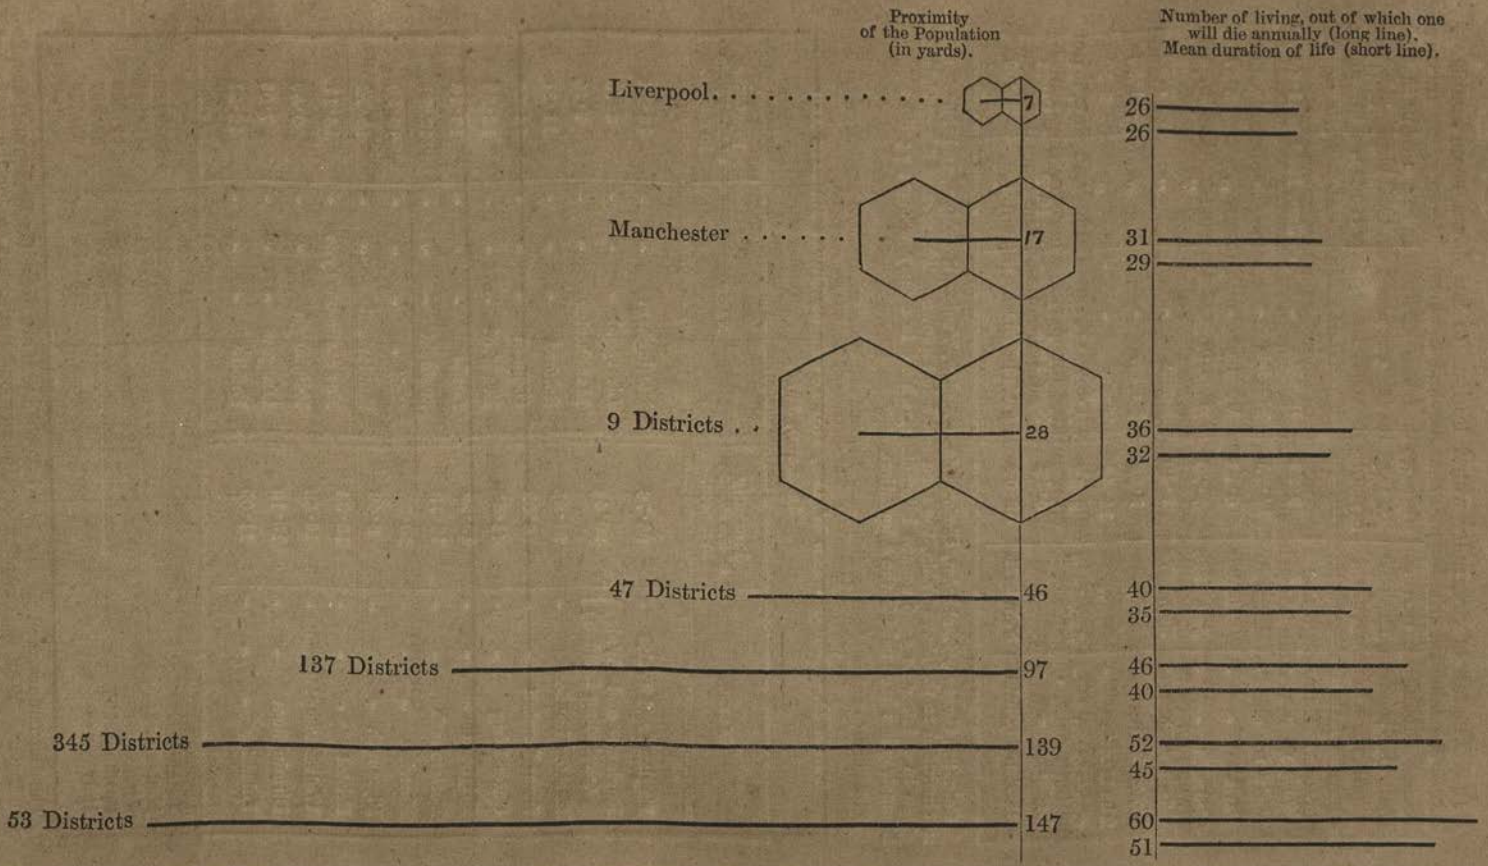
COUNTRY.	Proximity of the People.		Density of the Population.
	Metres.	Yards.	Persons to a square kilometre.
England and Wales	84·81	92·75	160·535
Denmark	152·45	166·72	49·683
Sweden	339·51	371·30	10·017
Austria	126·78	138·65	71·839
Hungary (1875)	154·72	169·21	48·240
Prussia	124·30	135·94	74·738
German Empire	120·29	131·55	79·793
Belgium	79·84	87·32	181·163
Netherlands	99·25	108·54	117·236
France	128·76	140·82	69·652
Spain (1870)	186·06	203·48	33·357
Italy	111·00	121·39	93·714

The Populations used for the above Table are taken from the Registrar-General's 39th Report. With the exception of Hungary and Spain they are for the year *1876* (estimated or enumerated).

The areas were obtained from the Almanach de Gotha.

FORMULA.

$p = \left(\frac{4}{3}\right)^{\frac{1}{2}} a^{\frac{1}{2}}$, where p = Proximity, and a = Area to each Person. $\left(\log. \left(\frac{4}{3}\right)^{\frac{1}{2}} = \cdot 0312347\right)$



NOTE.—Given the mean duration of life (e) in an area with a stated proximity (p), the mean duration of life (e') in another area with a different proximity (p') can be calculated approximately by the formula $e' = e \left(\frac{p'}{p}\right)^{\cdot 24}$.

TABLE C.—FOREIGN TOWNS.

TOWN.	Date at which the Population is taken.	Proximity of the People in metres.	TOWN.	Date at which the Population is taken.	Proximity of the People in metres.

Present Provision of Parks in the Great Towns.

To show the present provision of parks in the great towns of the country, queries were addressed to the authorities, and replies, of which the following is a digest, have been furnished by Edward Hornsby, Esq., Secretary, Board of Public Works, Dublin; by Joseph Rayner, Esq., Town Clerk, Liverpool; by Dr. Robertson, M.D., F.R.S.E., Edinburgh; by William Price, Esq., Town Clerk, Bristol; by Dr. Russell, M.D., Medical Officer of Health, Glasgow; by J. A. Freeman, Esq., Town Clerk, Brighton; by J. E. Wakefield, Esq., Clerk of the Metropolitan Board of Works, Spring Gardens, London; by W. T. McGowen, Esq., Town Clerk, Bradford; by W. H. Talbot, Esq., Deputy Town Clerk, Manchester; by E. J. Hayes, Esq., Town Clerk, Birmingham; by C. C. Whiteford, Esq., Town Clerk, Plymouth; by G. W. Morrison, Esq., Town Clerk, Leeds; by J. Storey, Esq., Town Clerk, Leicester; by S. G. Johnson, Esq., Town Clerk, Nottingham; by C. Moorhouse, Esq., Town Clerk, Salford; by H. Booth, Esq., Town Clerk, Oldham; by W. Snowball, Esq., Town Clerk, Sunderland; by C. S. Todd, Esq., Town Clerk, Hull; by R. P. Philipson, Esq., Town Clerk, Newcastle-on-Tyne; by J. Yeomans, Esq., Town Clerk, Sheffield; by J. Howard, Esq., Town Clerk, Portsmouth; by H. B. Miller, Esq., Town Clerk, Norwich; and by H. Underhill, Esq., Town Clerk, Wolverhampton.

Dublin contains 10,050 acres, and an estimated population in 1879 of 314,666; it has one public park, viz., Phœnix Park, with an area of 1753 acres, the Glasnevin Botanic Gardens covering an area of nearly 40 acres, and a lawn of 3 acres belonging to Leinster House, to which the public are admitted. The annual cost of maintenance of the park, which is situated to the west, and in the immediate vicinity of the city, is 6768*l.*, that of the Botanic Gardens, *excluding* the pay of officials and workmen, which is defrayed by the Science and Art Department, is 986*l.* In addition to the park and gardens, there is an open space of about 40 acres, known as St. Stephen's Green, which is now being ornamented at the expense of Sir A. Guinness, Bart., M.P., and will, when completed, be opened as a public park. It will be vested in the Commissioners of Public Works and maintained as a public park from 1st July 1879, at an annual estimated cost of 1,400*l.*

Edinburgh contains an area of 4191 acres, and an estimated population in 1879 of 226,075; it has one royal park, viz., Queen's Park, containing 407 acres, and about 145 acres of park and meadow ground which belong to the city. Music is occasionally performed by military bands. The parks are frequented by all classes of the population. Queen's Park is situated about half a mile to the east of the centre of the city; the other park is about a quarter of a mile to the south, and the meadow ground is nearly a mile to the north-west of the centre of the city.

Bristol, containing an area of 4452 acres, and an estimated population in 1879 of 209,947, has two downs or commons covering an area of 442 acres. They are thickly planted with thorn and other bushes and contain many fine timber trees, but nothing of an ornamental style, the prevailing idea being to preserve the down or common character, and avoid that of a garden. Clifton Down was settled without any payment, subject to certain commonable rights; and the Corporation purchased Durdham Down, subject to such rights for 15,000*l.* The cost of maintaining these two downs is between 500*l.* and 600*l.* a year. The property in the neighbourhood is said, undoubtedly, to have increased in value, both on account of the many advantages the downs afford, and the certainty that they will always remain open and unenclosed. In the summer months music is constantly per-

formed by itinerant bands, and others partly supported by the inhabitants. The downs are frequented by all classes of the population, and form one of the chief attractions to Clifton as a health resort. They lie in a north-westerly direction and within two miles from the centre of the city.

Liverpool, containing an area of 5210 acres, and an estimated population in 1879 of 538,338, has four parks covering an area of 525 acres. They are planted and ornamented. The original cost of two of the parks including the building land was 573,382*l.*, but the cost of the other two cannot be obtained, as they were formed out of the Corporate Estate, and not purchased separately for this specific purpose. The annual cost of maintenance of the four parks is about 8050*l.* Music is generally performed by the band of the Liverpool police force, and by the bands of various volunteer corps. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. The parks are situated south-east, north-east, and east, at an average distance of about one mile and a quarter from the centre of the town.

Glasgow contains 6033 acres, and an estimated population in 1879 of 578,156; it has four parks covering an area of 447 acres, about one-fourth of which is planted with trees, shrubs, and flowers. The parks were purchased by the Town Council of Glasgow as trustees under "The Glasgow Public Parks Act, 1859," and "The Glasgow Improvement Act, 1866," at a cost, including expense of formation, of 310,000*l.* The annual cost of maintenance of the parks, (together with 9000*l.* interest,) amounts to 19,250*l.* The property in the neighbourhood is said to have increased considerably in value since their formation. Music is performed at the cost of the Corporation, by military bands three nights in the week during the summer in each of the parks, which are frequented by all classes of the population, especially the working classes. It is believed that the parks have contributed to the health of the neighbourhood. They are situated between one and two miles from the centre of the town, in easterly, westerly, and southerly directions.

Brighton, containing an area of 2354 acres, and an estimated population in 1879 of 105,608, has no parks, but two recreation grounds, viz., the Level, and the Race Ground, covering an area of about 106 acres, the outer pathways of which are planted with trees and shrubs. They were dedicated to the public use by the Lords of the Manor and their tenants on a division of certain lands in the borough known as the tenantry lands. The cost of maintenance of the Level, which contains a little over 10 acres, is about 100*l.* a year. The Race Ground is vested in trustees, and no outlay is made upon it. The grounds are chiefly frequented by the working classes and their children, and, it is believed, have contributed to the health of the neighbourhood. The Level is situated in the centre of the town, and the Race Ground at the north-east corner.

London, having an area of 75,362 acres, and an estimated population in 1879 of 3,620,868 is provided with nine royal parks, containing 1790 acres, all of which are planted and ornamented. The cost of maintaining the parks is stated to be about 74,553*l.* annually. It has also two people's parks and several commons and open spaces, covering an area of about 1459 acres, under the management of the Board of Works, who are negotiating for the acquirement of other open spaces near the metropolis. Excluding Plumstead and Welling Commons, the Board of Works have expended about 346,033*l.* in the purchase, formation, and improvement of the two people's parks, commons, and open spaces, which cost annually about 7390*l.* for maintenance. The Board also paid 20,450*l.* for a part of Victoria Park, which the Government were about to devote to building purposes. The parks, in nearly all of which music is performed frequently during the summer months, are frequented by all classes of

the population, and without doubt exercise a very beneficial influence over the people in many ways. They are situated in all directions around the metropolis.

"It may perhaps be assumed that London, with her royal as well as her "people's parks, is better provided with open spaces than provincial "towns. The Thames is certainly a great air artery and a source of "never-ending enjoyment to the Londoner; but for recreation ground we "have but an acre for 1114 persons (less than several provincial towns), "and there are very few neighbourhoods where there is any land that it "is possible to convert into another park. In Paddington, however, there "is still time to save nearly 100 acres from the builder. The land is "adjacent to Kilburn and Maida Vale, and is surrounded on all sides by "an ever-increasing population which is practically out of reach of any "park or recreation ground.

"At this moment a petition, signed by 18,000 persons, is about to be "presented to the Board of Works from Paddington and the adjoining "parishes, praying the Board to secure this land, the remainder unbuilt "over of the so-called Paddington Estate. The ground is now surrounded, "within a radius of a mile, by nearly 100,000 people; whole districts in "Kilburn and Queen's Park Estate being inhabited exclusively by the "artisan class, far removed from amusements of all sorts, indoor or out-"door. It would be particularly appropriate that the Paddington Estate "should be restored to public uses, forming as it does part of the lands left "long ago to the parishioners of Paddington."*

Leicester, containing an area of about 3200 acres, and an estimated population in 1879 of 125,622, has about 65 acres of park land for the recreation of the people; it consists of good open grass land, but is not planted or ornamented. The original cost is not known, and the annual outlay for maintenance is more than covered by the adjistment of sheep. The property in the neighbourhood of the park is said to have increased in value. Music is performed one evening in a week during the summer by a private subscription band. The park is frequented by all classes of the population, and, it is believed, has contributed to the health of the neighbourhood. It is situated about a mile in a south-easterly direction from the centre of the town.

Leicester also has two public recreation grounds, one on the southern side of the town containing 9 acres, and the other on the eastern side, containing about 26 acres, each about three quarters of a mile from the centre of the town. The Corporation have recently purchased about 60 acres of land on the north-western side of the town (three-quarters of a mile from its centre), and intend planting and ornamenting it at a total cost, including purchase, of 30,000*l.*

Bradford, containing about 7220 acres, and an estimated population in 1879 of 191,046, has four parks, one of which is not quite complete, covering an area of 215 acres. They are all planted and ornamented in a most liberal manner. The original cost is stated to be about 169,804*l.* One park valued at 40,000*l.*, was established by a public committee, and handed over to the Corporation free of cost, the other three being purchased by the Corporation. Thirty acres of land have also been acquired for the formation of a fifth park, which when complete will cost the Corporation about 20,000*l.* The annual cost of maintenance at present is about 2000*l.*, but will be increased as Bowling and Bradford Moor Parks are completed. The property in the neighbourhood of the parks has increased very considerably in value; land which was formerly used for pasture has been extensively taken up for building sites, and instead of being sold by the *acre* it is now sold by the *yard*. Music is performed in the parks on appointed afternoons throughout the summer months, by bands

* *See* Miss M. J. Vernon's paper on "Public Parks and Gardens," read at the Social Science Congress, Cheltenham, Oct. 1878.

supported by subscribers, and sums voluntarily contributed. The parks are frequented by all classes of the population (especially by the industrial classes), and, it is believed, have contributed much to the health of the neighbourhood, and exercise beneficial influences on the visitors. The parks are situated on all sides of the town, in the most open and healthful spots that could be selected, such as are already, or are fast becoming, centres of population, in order that they may be available without requiring the inhabitants to walk far to get to them.

Manchester, containing 4293 acres, and an estimated population in 1879 of 361,819, has three parks, covering an area of about 121 acres, all of which are planted and ornamented. Two of the parks were purchased by public subscription, and cost about 14,963*l.*; the other was purchased and formed by the Corporation, at a cost of about 79,000*l.* In addition to the three parks there is an open space of about 5 acres known as Ardwick Green, which was presented to the city by the owners. The annual cost of maintenance is about 6000*l.* for the whole. The property in the neighbourhood of the parks has increased in value, particularly that adjoining the Alexandra Park, where, since its formation, many residences have been built. Music is performed by the police band, the expense of which is defrayed by private subscription. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. They are situated north-west, north-east, east, and south of the city, and between one and two miles from its centre.

Birmingham, containing an area of 8400 acres, and an estimated population in 1879 of 388,884, has seven public parks and two public recreation grounds. The area of the parks is about 211 acres, and that of the recreation grounds about 13 acres. They are all laid out and planted, and two of them have ornamental sheets of water. Four of the parks and one recreation ground were presented to the Corporation. The remainder cost the Corporation, in the purchase, planting, &c., about 58,000*l.* The cost of maintenance in the year 1877, exclusive of interest on loans and sinking funds, was 4227*l.* In the summer months music is performed in two of the parks by the police band. The parks are frequented by all classes of the population, and very largely by the working classes; and, it is believed, have contributed to the health of the neighbourhood; they are situated on all sides of the town and between one and two miles from the centre.

Leeds contains an area of 21,572 acres, and an estimated population in 1879 of 311,860; it has one park and five recreation grounds. The recreation grounds cover an area of 108 acres. The Corporation expended a sum of about 151,487*l.* in the purchase of the park estate which contains 774 acres, and it is intended to retain 350 acres, which are planted and ornamented, for park purposes and to sell the remainder. The cost of four of the recreation grounds was about 13,367*l.*, the other being held by the Corporation at a rental of 140*l.* The annual cost of maintaining the park is about 3507*l.* and of the recreation grounds 111*l.* The park is situated about two miles and three quarters in a north-easterly direction from the centre of the town.

Plymouth, containing an area of 1395 acres, and an estimated population in 1879 of 74,293, has parks or open spaces known as the Plymouth Hoe, the Governor's Meadow, and part of the Glacis of the Citadel; they contain altogether an area of about 22 acres; the Governor's Meadow only is planted with a border. The Hoe has been the property of the Corporation time out of mind; but the other two spaces are rented from the War Department for 30 years at 52*l.* per annum. The annual cost of maintenance is between 350*l.* and 400*l.* In the summer months music is performed by the bands of the Royal Marine corps and by those of the regiments stationed in Plymouth and Devonport. The parks are frequented by all classes of the population, and, it is believed, have contributed to the

health of the neighbourhood. They are situated about half a mile in a southerly direction from the centre of the town.

NOTTINGHAM, containing 9960 acres, and an estimated population in 1879 of 169,396, has 150 acres of parks and recreation grounds, about 40 acres of which are planted and laid out in an ornamental manner; the remainder consists of cricket and recreation grounds and public walks. Of the 150 acres about 120 were allotted to the Corporation by the Commissioners under the Nottingham Inclosure Act of 1845 for recreation purposes; the remainder is the private property of the Corporation. The property in the neighbourhood of the parks is considered to have increased in value. Music is occasionally performed in the evenings by the Nottingham police and other local bands. The parks and grounds, costing annually 2570*l.* for maintenance, are frequented by all classes of the population, but chiefly by the working classes, and, it is believed, have contributed to the health of the neighbourhood. They are situated in nearly all directions, and within a mile, from the centre of the town.

SALFORD, containing an area of 5170 acres, and an estimated population in 1879 of 177,849, has three parks covering an area of 70 acres, all of which are planted and ornamented with flower beds, mounds, and shrubberies. There is also, at the present time, another park, of about 17 acres, in course of construction. The amount expended by the Corporation in the purchase and formation of parks is 21,725*l.* One of them was, however, almost entirely acquired by public subscription and handed over to the Corporation for management. They cost about 4673*l.* per annum for maintenance. Music is performed in each of the parks during the summer months by the police band; and property in their neighbourhood is said to have increased in value. They are chiefly frequented by the working classes, and, it is believed, have contributed to the health of the neighbourhood. The sites have been so selected that each park is within easy reach of the most populous parts of the borough.

OLDHAM, containing 4666 acres, and an estimated population in 1879 of 111,318, has one park covering an area of 60 acres, which is planted and ornamented. It was purchased and planted by the Corporation at a cost of about 33,000*l.*, and the sum of about 1250*l.* is expended annually in its maintenance. The property in the neighbourhood of the park is said to have increased considerably in value. Music is occasionally performed by volunteer and other bands. The park is frequented by all classes of the population, and particularly by the working classes, and it is believed to have contributed much to the health of the neighbourhood. It is situated about a quarter of a mile in a southerly direction from the centre of the town. It is intended to secure 16 acres of land in another part of Oldham as recreation ground.

SUNDERLAND, containing an area of 2768 acres and an estimated population in 1879 of 114,575, has about 24 acres of park ground, planted and laid out with intersecting walks and an ornamental sheet of water. It was purchased and formed by the Corporation at a cost of 15,500*l.*, and about 700*l.*, exclusive of interest, &c., is expended annually in maintaining it. The property in its neighbourhood is said to have increased very considerably in value. Music is performed occasionally during the summer months by the police and other local bands. All classes of the inhabitants frequent the park, which is believed to have contributed to the health of the neighbourhood. It is situated as nearly as may be in the centre of the town.

HULL containing an area of 5635 acres, and an estimated population in 1879 of 146,347, has one park and two recreation grounds. The park contains 26 acres and the two recreation grounds nearly 5 acres. Only the park is planted and ornamented. The land for the park was presented, and the recreation grounds are leased to the Corporation. The park costs annually for maintenance about 450*l.*, and the recreation grounds 160*l.*; the property in the neighbourhood of the former is said to have increased

immensely in value. Music is performed by the police and other bands on stated days and hours. The park is frequented by all classes, and it is believed to have contributed to the health of the neighbourhood. It is situated about one mile from the centre of the town in a north-westerly direction.

NEWCASTLE-ON-TYNE contains 5371 acres, and an estimated population in 1879 of 146,948; it has one park covering an area of 35 acres planted and ornamented. It was obtained free of cost, the only expense being the formation. The annual cost of maintenance is about 650*l.* Music is performed weekly in the summer months by the police band, and the park is frequented by all classes of the population. The distance of the park from the centre of the town is about three quarters of a mile in a northerly direction. Owing to the success and the satisfaction given to the public by the park, the Corporation have purchased about 31 acres, and have been presented with 26 acres of land by Sir W. G. Armstrong, for the formation of two other parks, which it is thought will be opened in the spring of 1879. This additional outlay on the part of the Corporation will cost about 26,560*l.* in purchase money. One of these new parks is situated in the western and the other in the eastern part of the town.

SHEFFIELD containing an area of 19,651 acres, and an estimated population in 1879 of 297,138, has two parks covering an area of 49 acres, both of which are planted to a greater or a less extent. The original cost of Weston Park, containing 13 acres, was 17,500*l.*; it was purchased by the Corporation. The other park, containing 36 acres, was presented to the Corporation by Mr. Alderman Mark Firth, J.P. The annual cost of maintaining the two parks is about 1300*l.* Music is occasionally performed during the summer months by the volunteer and police bands. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. Weston Park is situated about one mile in a westerly direction and Firth Park about two miles and a half in a northerly direction from the centre of the town.

In addition to the two parks, there is one belonging to the Duke of Norfolk containing about 30 acres, to which the public are admitted. It is situated about one mile from the centre of the town in an easterly direction.

PORTSMOUTH, containing an area of 4486 acres, and an estimated population in 1879 of 131,821, has one park, opened in June last, the area of which is about 14 acres. It is planted, and adjoining is an additional space of about 2 acres, set apart exclusively for children, with swings and other amusements. The land is held for 50 years, under a lease from the War Department, at an annual rent of 50*l.* The cost of formation, lodges, &c. was 3500*l.* No arrangement as to the performance of music has yet been made, but the "Union" band plays in the afternoon and evening in the summer months. The park is chiefly frequented by the poorer classes, and is situated in the centre of the town.

Another piece of land of 17 acres, near the sea, has been acquired for a park which is now in course of formation.

NORWICH, containing an area of 7472 acres, and an estimated population in 1879 of 85,222, has no park, but there is a space of about 7 acres known as Chapel Field, which is surrounded with fine elm trees. The field has been in the possession of the Corporation for 600 years at least, and costs about 60*l.* or 70*l.* per annum for maintenance. It is chiefly frequented by the working classes and their children, and it is believed to have contributed to the health of the neighbourhood. It is situated about half a mile in a southerly direction from the centre of the city.

WOLVERHAMPTON, containing an area of 3396 acres, and an estimated population in 1879 of 75,100, has at the present time no public park for the recreation of the people. The town council have, however, just accepted a lease of 50 acres of land which they are about forming into a public park. It will be situated almost in the centre of the borough, and will probably be opened in about a year.

COMPARATIVE ANALYSIS OF PARK PROVISION IN THE TOWNS.

An attempt is made in the following table to show how the principal towns of England are relatively provided with parks. Thus, in the 22 towns there is one acre of park area to 25 acres of town area; and there are 965 inhabitants to one acre of park area. In Dublin there are six acres of town area to one acre of park area; and there are 175 inhabitants to one acre of park area; in London there are 23 acres of town area to one acre of park area, and there are 1114 inhabitants to one acre of park area; there are 47 acres of town area to one acre of park area in Leeds, and 681 inhabitants to one acre of park area.

ACRES of TOWN AREA to ONE of PARK; PERSONS to ONE ACRE of PARK, and to ONE ACRE of TOWN AREA; and the NUMBER and PROPORTION of OUTSIDE HOUSES.

Norwich	1067	12175	11	537	·02933
Wolverhampton (no Parks)	—	—	22	456	·03448

A = Town area; P = Park area; I = Inhabitants; H^2 = Total Houses; H = Houses on side of a square; $\frac{A}{P}$ = Town area to Park area; $\frac{I}{P}$ = Inhabitants to Park area; $4(H-1)$ = Outside Houses; $\frac{4(H-1)}{H^2}$ = proportional number of Outside Houses to the total.

NOTE.—The Table may be read thus: In London there are 23 acres of town area to one acre of park, 1114 persons to one acre of park, 48 persons to one acre of town; the number of outside houses is 2581, and the proportional number to total houses ·00618. In Plymouth there are 63 acres of town area to one acre of park, 3377 persons to one acre of park, 53 persons to one acre of town; the number of outside houses is 338, and the proportional number to total houses ·04631.

It must be evident that there is another element that has to be taken into account; that is the size of the town compared with its circumference. For a town is supplied with air from without as well as from within; and generally the number of houses in the circumference of a town is greater in proportion in the small than in the large towns. Thus, suppose the houses to be symmetrically arranged in a square round the centre of a town, then a single house is surrounded on every side with air. If the square has five houses to a side then the houses will be 25, and the outside houses will be 16;

1	2	3	4	5
16				6
15				7
14				8
13	12	11	10	9

with six houses to a side there will be 36 houses and 20 outside houses; with 100 houses to the side there will be 10,000 and 396 outside houses. The degrees of the supplies of outside air will be expressed by the fractions $\frac{16}{25}$, $\frac{20}{36}$, $\frac{396}{10,000}$. The general formula will be $\frac{4\,(H-1)}{H^2}=h$.

Then a correction will be required in comparing towns of different sizes. Thus the population of Birmingham is 388,884 and the population of London is 3,620,868. The houses in Birmingham are 68,532, the houses in London are 417,767. Supposing the houses to be arranged symmetrically in squares in both towns the outside houses will be 1043 in Birmingham and 2581 in London. The proportion of air supplied from outside to Birmingham will be to that supplied from outside houses in London, as $\frac{1043}{68532}$ to $\frac{2581}{417767}$ or as ·01522 to ·00618.

The houses are not arranged symmetrically in squares, but the numbers given are *minima*, for any irregularity in contour would increase the number of outside houses to the total number of houses.

I have the honour to be,
Sir,
Your very obedient servant,

WILLIAM FARR.

To
The Registrar General.

APPENDIX TABLES,

1877.

NOTE.—For the causes of death in the 5 years 1838-42, and the 3 years 1847-8-9, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843-46.

* Deaths from violence were not classified according to orders prior to 1858. All deaths from violence are classified to Order I. (Accident or Negligence), unless they are specially ascribed to homicide, suicide, or execution. Order 2, comprising violent deaths in battle, is inapplicable to the civil population.

† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the "Criminal Returns," inasmuch as the executions therein recorded in each year are classed according to the *dates of conviction*, while the numbers in this Table are placed under the years in which the deaths are *registered*.

in each of the **28 Years 1850–1877.**

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note referring to classification of deaths from violence on page 248.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1858 these have been distributed rateably over all the specified causes in the Table.

† See note referring to the classification of deaths from violence on page 248.

‡ Average in 10 years.

TABLE 4.* (*continued.*) **Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **25 Years 1850–74,** and in each **Quinquenniad** of that Period; also the **Rate** of **Mortality** in the Years **1875, 1876,** and **1877.**

TABLE 5.—**Causes of Death in England in the Year 1877,** arranged in the order of their fatality.

CAUSES OF DEATH.	Number of Deaths registered in the Year 1877.	*Proportional Number* from each Cause to 1,000,000 Deaths from Specified Causes.*
Bronchitis	54,006	108,308
Phthisis	51,353	102,986
Heart Disease	32,802	65,783
Old Age	26,078	52,298
Atrophy and Debility	25,533	51,205
Convulsion	24,147	48,426
Pneumonia	23,696	47,522
Diarrhœa	14,703	29,487
Scarlet Fever	14,456	28,992
Apoplexy	13,283	26,638
Cancer	12,122	24,310
Paralysis	11,937	23,939
Premature Birth	11,618	23,299
Whooping-cough	11,358	22,778
Measles	9,045	18,139
Hydrocephalus	7,881	15,805
Tabes Mesenterica	7,812	15,667
Fractures and Contusions (Accident)	7,317	14,674
Liver Disease	7,232	14,502
Cephalitis	6,910	13,858
Enteric Fever	6,879	13,795
Brain Disease	6,700	13,437
Lung Disease	5,337	10,803
Bright's Disease (Nephria)	4,763	9,553
Teething	4,470	8,964
Small-pox	4,278	8,579
Croup	3,910	7,841
Rheumatism	3,574	7,167
Dropsy	3,556	7,131
Scrofula	3,493	7,005
Drowning (Accident)	3,012	6,040
Stomach Disease	2,965	5,946
Epilepsy	2,946	5,908
Enteritis	2,899	5,814
Diphtheria	2,731	5,477
Kidney Disease	2,635	5,284
Sudden Deaths	2,543	5,100
Asthma	2,469	4,951
Joint Disease	2,207	4,426
Burns and Scalds (Accident)	2,197	4,406
Erysipelas	2,106	4,223
Syphilis	2,085	4,182
Childbirth	1,999	4,009
Peritonitis	1,971	3,953
Simple Continued Fever	1,958	3,927
Laryngitis	1,868	3,746
Suffocation (Accident)	1,682	3,373
Jaundice	1,678	3,365
Want of Breast-milk	1,633	3,316
Ileus	1,637	3,283
Insanity	1,509	3,026
Puerperal Fever (Metria)	1,444	2,896
Mortification	1,342	2,691
Hepatitis	1,308	2,623
Ulceration of Intestines	1,245	2,497
Typhus Fever	1,150	2,306
Thrush	1,134	2,275
Pleurisy	1,117	2,240
Hernia	1,094	2,194
Uterus Disease	1,045	2,096
Phlegmon	1,036	2,078
Diabetes	1,006	2,017
Gastritis	941	1,887
Nephritis	890	1,785
Accident (not classed)	875	1,755
Cyanosis	844	1,693
Aneurism	820	1,644
Purpura and Scurvy	757	1,518
Intemperance	734	1,472
Pericarditis	708	1,420
Gout	659	1,322
Spina Bifida	653	1,310
Hanging (Suicide)	629	1,260
Cystitis	628	1,259
Skin Disease	617	1,237
Malformations	594	1,191
Dysentery	579	1,161
Ascites	499	1,001
Stricture of Intestines	465	933
Intussusception	429	860
Delirium Tremens	412	826
Ulcer	401	804
Drowning (Suicide)	374	750
Ovarian Dropsy	355	712
Murder and Manslaughter	347	696
Poison (Accident)	315	632
Cut, Stab (Suicide)	312	626
Cholera	309	620
Stricture of Urethra	268	537
Carbuncle	263	527
Zymotic Diseases (not classed)	252	505
Calculus (Stone)	245	491
Quinsy	232	465
Worms	225	451
Influenza	205	411
Poison (Suicide)	168	337
Synovitis (Arthritis)	166	333
Cancrum Oris (Noma)	134	269
Ague	127	255
Cut, Stab (Accident)	127	255
Ischuria	127	255
Spleen Disease	127	255
Suicide (not classed)	123	247
Paramenia	117	235
Fistula	110	221
Gunshot Wounds (Suicide)	93	187
Gunshot Wounds (Accident)	90	180
Chorea	82	164
Remittent Fever	81	162
Hydrophobia	79	158
Privation	52	104
Hanging (Execution)	23	46
Glanders	4	8
Pancreas Disease	4	8

* The causes of 1,856 deaths registered in 1877 were either ill-defined or not specified.

TABLE 6.—ENGLAND. **Death-rate** per **1000 Persons living,** from certain **Causes,** in each of the **Registration Counties** in the Year **1877.**

* The populations of these counties have been estimated to the middle of 1877 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1877. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 289) *and "Index of certain Towns"* (page 299).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

Sub-District.	District.	No.
A		
Abbey	Bath	317; 3
Abbey Holme	Wigton	570; 2
Abbots Bromley	Uttoxeter	367; 2
Abbotsbury	Weymouth	264; 4
